# **185 WATTS**

# SINGLE/MULTI OUTPUT AC-DC

## FEATURES:

- Compact 4.2" x 7.0" x 1.5" Size IEC 62368-1 2nd ed. Certification
- 2 Year Warranty •
- Universal 85-264V Input
- One to Four Outputs
- High Efficiency
- 0-70°C Operating Temperature Optional Chassis/Cover
- IEC 60601-1-2 4th ed. EMC Class B Emissions per EN55011/32 RoHS Compliant

• IEC 60601-1 3rd ed. Medical Cert.

- Optional Remote Inhibit/Enable

#### EN 62368-1:2014, 2nd Edition TUV EN 60601-1:2006/A1:2013 Low Voltage Directive (2014/35/EU of February 2014) RoHS Directive (Recast) (2011/65/EU of June 2011)

### ORDERING INFORMATION

Consult factory for alternate output configurations. Consult factory for positive, negative or floating outputs. Please specify the following optional features when ordering:

CH - Chassis

CO - Cover

TS – Terminal Strip

RE - Remote Inhibit I/O - Isolated Outputs

#### **REL-185 SERIES MECHANICAL SPECIFICATIONS**

ALL DIMENSIONS IN INCHES (mm)

#### APPLICATIONS INFORMATION

- Each output can deliver its rated current but Total Output Power must not exceed 185W, as determined by the cooling method.
- Generally, adequate cooling is provided when semiconductor case temperatures do not exceed 70°C rise and transformer temperature does not exceed 60°C rise at any specified ambient temperature.
- Sufficient area must be provided around power supply to allow natural movement of air to develop in convection-cooled applications.
- This product is intended for use as a professionally-installed component within information technology, industrial, and medical equipment and is not intended for stand-alone operation.
- A minimum load of 10% is required on Output 1 to ensure proper regulation of remaining outputs.
- This product includes only one fuse in the input circuit. In consideration of Clause 8.11.5 of IEC 60601-1:2005, a second fuse may be required in neutral conductor of the end product.
- Peak-to-Peak Output Ripple and Noise is measured directly at the output terminals of the power supply, without the use of the probe ground lead or retractable tip (tip-and-barrel method), 20 MHz bandwidth.
- 8. This product was type-tested and safety-certified using the dielectric strength test voltages listed in Table 6 of IEC 60601-1:2005. In consideration of Clause 8.8.3, care must be taken to insure that the voltage applied to a reinforced insulation does not overstress different types and levels of insulation. Primary and secondary-to-ground capacitors may need to be disconnected prior to performing a dielectric strength test on the power supply or the end product. It is highly recommended that the DC test voltages listed in DVB.1, Annex DVB of UL 60601-11 st Edition are not exceeded during a production-line dielectric strength test of the assembled end product. Please consult factory for further information.
- 9. This power supply has been safety-approved and final-tested using a DC dielectric strength test. Please consult factory before performing an AC dielectric strength test.
- Remote-Sense terminals may be used to compensate for cable losses up to 250mV. The use of a twisted pair, decoupling capacitors and an appropriately-rated low-impedance capacitor connected across the load will increase noise immunity.
- Maximum screw penetration into bottom chassis mounting holes is 0.100 inches. Maximum screw penetration into side chassis mounting holes is 0.250 inches.
- To comply with emissions specifications, all four mounting hole ground pads must be electrically connected to a common metal chassis. Chassis/Cover option recommended. Refer to Operating Instructions for additional information.
- Common RF shielding precautions may need to be taken to assure emissions compliance. Refer to Operating Instructions for additional information.
- Power-Fail (AC-Good) feature provides a logic-low warning signal from an open collector transistor output 10ms prior to loss of output from AC failure, 5V/10mA.
- 15. 300LFM minimum of airflow must be maintained one inch above all points of top-side components or cover when forced-air cooling is required.
- Total power must not exceed 135W with convection cooling on open-frame models except where noted.
- Total power must not exceed 185W with 300LFM forced-air cooling on open-frame models.
- 18. Total power must not exceed 110W with convection cooling and Chassis/Cover option.
- Total power must not exceed 185W with 300LFM forced-air cooling and Chassis/Cover option.
- 20. Total current from Outputs 3 & 4 must not exceed 3A with convection cooling.
- 21. Total current from Outputs 1 & 2 must not exceed 20A with convection cooling.
- 22. Rated 15A maximum with convection cooling.
- 23. Rated 27A maximum with convection cooling. MAXIMUM OUTPUT POWER vs. AMBIENT TEMPERATURE
