Revision History

Date	Rev.	Comments		
October 2016	А	Initial document with firmware revision 8.0.0.0.		
November 2016	В	Updated document to include firmware features of all models of the SGX 5150 IoT device gateway.		
January 2018	С	Updated document to firmware revision 8.1.0.1R17.		
January 2019	D	Updated document to firmware revision 8.2.0.3R5.		
April 2019	E	Updated document to firmware revision 8.4.0.0.		
May 2019	F	Updated document to firmware revision 8.5.0.0.		
August 2019	G	Updated document to firmware revision 8.7.0.0.		
January 2020	Н	 Updated for firmware revision 8.9.0.0. Added Web API reference. Replaced DeviceInstaller information with Lantronix Provisioning Manager information.

1: About This Guide

This document describes how to configure the Lantronix® SGX™ 5150 IoT device gateway using the Command Line Interface (CLI) and/or Extensible Markup Language (XML). CLI provides an interactive mode for accessing the gateway configuration and management interface. It is most suited for system and network administrators comfortable with using similar interfaces on enterprise IT and networking products. It is also helpful as a quick tool for access via the product's serial ports or console/management ports. XML provides an extensible mode for software developers interfacing with the gateway and system integrators performing batch provisioning/ updates.

Chapter Summaries

This table lists and summarizes the content of each chapter.

Chapter	Summary
2: Overview	Gives an overview of CLI and XML.
3: Command Line Interface	Lists commands and describes how to use CLI to configure the SGX 5150 IoT device gateway.
4: Configuration Using XML	Lists XML Configuration Record (XCR) groups and items and describes how to use XCRs to configure the SGX 5150 IoT device gateway.
5: Configuration Using Web API	Lists Web API actions that can be used to export and import configuration, export status, take a status action, and manipulate the file system.
6: Commands and Levels	Provides an index of the CLI command hierarchy with hyperlinks to the corresponding command details.

Conventions

The table below lists and describes the conventions used in this book.

Convention	Description			
Bold text	Default parameters			
Italic text	Required values for parameters.			
Square Brackets []	Optional parameters.			
Angle Brackets < >	Possible values for parameters.			
Pipe	Choice of parameters.			
Warning	Warning: Means that you are in a situation that could cause equipment damage or bodily injury. Before you work on any equipment, you must be aware of the hazards involved with electrical circuitry and be familiar with standard practices for preventing accidents.			
Note	Note: Means take notice. Notes contain helpful suggestions, information, or references to material not covered in the publication.			
Caution	Caution: Means you might do something that could result in faulty equipment operation or loss of data.			

Convention	Description
Screen Font	CLI terminal sessions and examples of CLI input are depicted in courier new font.

Additional Documentation

Visit the Lantronix website at www.Lantronix.com/support/documentation for all latest Lantronix documentation which includes the latest versions of the SGX 5150 IoT device gateway-related documentation listed below.

Document	Description		
SGX 5150, SGX 5150 MD, and SGX 5150 XL IoT Device Gateway User Guide	Describes how to configure and use the SGX 5150 IoT device gateway.		
SGX 5150 IoT Device Gateway Product Brief	Provides key feature, SKU option, technical specifications, and order information about the SGX 5150 IoT device gateway.		
Com Port Redirector Quick Start and Online Help	Instructions for using the Lantronix Windows® operating system (OS) -based utility to create virtual com ports.		
Lantronix Provisioning Manager Online Help	Instructions for using the Lantronix Provisioning Manager application that discovers, configures, updates, and manages Lantronix devices.		

2: Overview

The SGX 5150 IoT device gateway supports three convenient configuration methods: Web Manager, CLI, and XML. For more information about Web Manager, see the SGX 5150, SGX 5150 MD, and SGX 5150 XL IoT Device Gateway User Guide available at www.Lantronix.com/support/documentation.

XML Architecture and Control

XML is a fundamental building block for Machine-to-Machine (M2M) and Internet of Things (IoT) networks. The SGX 5150 IoT device gateway supports XML configuration records that make configuring the SGX 5150 unit easy for users and administrators. XML configuration records are easy to edit with a standard text editor or an XML editor.

For a brief overview of XML, see *4: Configuration Using XML*. It provides guidelines for basic XML syntax, the specific XML tags used, and XML configuration records.

Command Line Interface

Making the edge-to-enterprise vision a reality, the SGX 5150 IoT device gateway uses industry-standard tools for configuration, communication, and control. For example, the SGX 5150 IoT device gateway uses a command line interface (CLI) whose syntax is very similar to that used by data center equipment such as routers and hubs.

For details of the CLI, see *6: Commands and Levels*. It provides an index of the CLI Command Hierarchy with links to the corresponding command details. The CLI provides commands for configuring, monitoring, and controlling the SGX 5150 IoT device gateway.

Web API

The Web APIs are restful APIs that allow access to a subset of gateway functions through a standard HTTP request. They can be used to export and import configuration, export status, take a status action, and manipulate the file system.

For Web API details and a list of actions, see 5: Configuration Using Web API.

3: Command Line Interface

This chapter describes accessing the SGX 5150 IoT device gateway by using Telnet, SSH, or serial ports to configure the gateway, navigating the CLI, typing keyboard shortcuts, and moving between the levels.

It contains the following sections:

- Configuration Using Telnet
- Configuration Using the Serial Lines
- Navigating the CLI Hierarchy
- Using Keyboard Shortcuts and CLI
- Understanding the CLI Level Hierarchy

Refer to *Chapter 6: Commands and Levels* for a complete list of levels, commands, and descriptions.

Configuration Using Telnet

To access and configure the SGX 5150 IoT device gateway by using a Telnet session over the network, you must first establish a Telnet connection. You can also establish a Telnet connection by clicking the Telnet Configuration tab in the Lantronix® DeviceInstaller™ utility. See the DeviceInstaller Online Help for more information.

To access the SGX 5150 IoT device gateway by using Telnet, perform the following steps.

- 1. Click **Start > Run**. The Run dialog box displays.
- 2. Type cmd in the dialog box and press **OK**.
- Type telnet x.x.x.x (x.x.x is the IP address) in a Windows/Linux command prompt.
- 4. The SGX 5150 IoT device gateway is online when the command prompt (>) displays. You are at the root level of the CLI.

Note: Depending on the level of security, a password may be required.

Configuration Using the Serial Lines

Serial Command Mode

The serial port can be configured to operate in command mode permanently or to be triggered under specified conditions. See the line line> Level command description for more information.

Serial Recovery

Serial Recovery mode will temporarily override line settings for the serial line to allow configuration changes to be made. Line settings will be restored once the user exits the Serial Recovery mode CLI.

To configure the SGX 5150 IoT device gateway locally using a serial port:

- 1. Connect a terminal or a PC running a terminal emulation program to one of the gateway's serial ports.
- 2. Configure the terminal to the following settings:
 - 9600 baud
 - 8-bit
 - No parity
 - 1 stop bit
 - No flow control.
- 3. Power off the gateway.
- 4. Press and hold down the exclamation point (!) key.
- 5. Power on the gateway. After about 10 seconds, the exclamation point will display on the terminal or PC screen.
- 6. Type xyz within 5 seconds to display the CLI prompt.

Navigating the CLI Hierarchy

The CLI is organized into a hierarchy of levels. Each level has a group of commands for a specific purpose. For example, to configure a setting for the FTP server, one would navigate to the FTP level, which is under the configuration level.

- To move to a different level—Enter the name of the level from within its parent level. For example, to enter the line level, type line <number> at the enable prompt. This displays: <enable> line <number>#.
- ◆ To exit and return to one level higher—Type exit and press the **Enter** key. Typing exit at the login level or the enable level will close the CLI session.
- To view the current configuration at any level—Type show.
- ◆ To view the list of commands available at the current level—Type the question mark "?". Items within < > (e.g. <string>) are required parameters.
- ◆ To view the available commands and explanations—Type the asterisk (*).
- ◆ To view the list of commands available for a partial command—Type the partial command followed by the question mark "?". For example: 1>#show? displays a list of all show commands at the line level.
- ◆ To view available commands and their explanations for a partial command—Type the partial command followed by the asterisk (*). For example: 1>#show* displays a list of all show commands and descriptions at the line level.
- To view the last 20 commands entered at the CLI—Type show history.

Using Keyboard Shortcuts and CLI

One useful shortcut built into the SGX 5150 IoT device gateway is that the complete text of a command does not have to be entered to issue a command. Typing just enough characters to uniquely identify a command, then hitting enter, can be used as a short cut for a command. For example, at the enable level, "sh" can be used for the "show" command.

Tab Completion is also available using the **Tab** and **Enter** keys on the keyboard. Typing the first few characters of a command, then hitting the **Tab** key displays the first command that begins with those characters. Hitting the **Tab** key again displays the next command that begins with the original characters typed. You can press **Enter** to execute the command or you can backspace to edit any parameters.

The following key combinations are allowed when configuring the gateway using the CLI:

Key Combination	Description		
Ctrl + a	Places cursor at the beginning of a line		
Ctrl + b	Backspaces one character		
Ctrl + d	Deletes one character		
Ctrl + e	Places cursor at the end of the line		
Ctrl + f	Moves cursor forward one character		
Ctrl + k	Deletes from the current position to the end of the line		
Ctrl + I	Redraws the command line		
Ctrl + n	Displays the next line in the history		
Ctrl + p	Displays the previous line in the history		
Ctrl + u	Deletes entire line and places cursor at start of prompt		
Ctrl + w	Deletes one word back		
Ctrl + z	Exits the current CLI level		
Esc + b	Moves cursor back one word		
Esc + f	Moves cursor forward one word		

Table 3-1 Keyboard Shortcuts

Understanding the CLI Level Hierarchy

The CLI hierarchy is a series of levels. Arranging commands in a hierarchy of levels provides a way to organize and group similar commands, provide different levels of security, and reduce the complexity and number commands and options presented to a user at one time.

When you start a command line session, you begin at the login level. This level can be password protected and provides access to high level status, a few diagnostic commands, and the enable level. Further gateway information and configuration are accessed via the enable level.

The enable level can also be password protected and is the gateway to full configuration and management of the intelligent gateway. There are commands for gathering and effecting all elements of gateway status and configuration, as well as commands that take you to additional levels. For instance, network specific status and configuration commands are found under the "configuration" level.

An overview of the levels in the SGX 5150 IoT device gateway is presented in *Figure 3-1 CLI Level Hierarchy*.

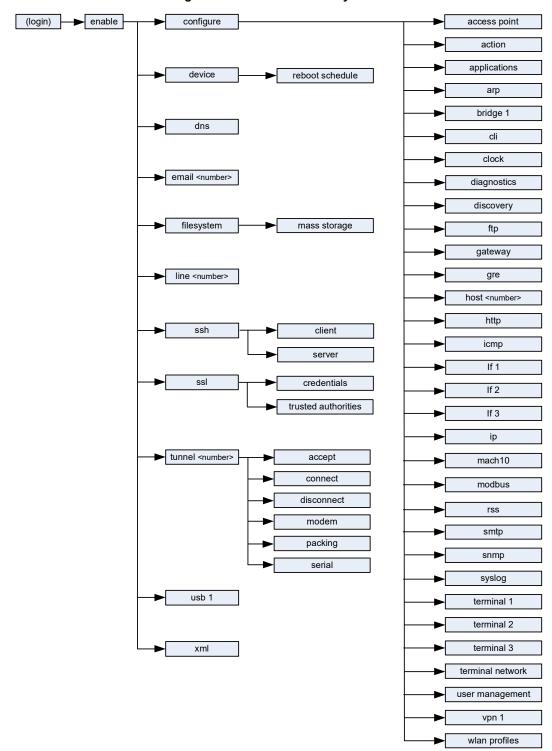

Figure 3-1 CLI Level Hierarchy

Commands at the login level (see *Figure 3-2 Login Level Commands* below) do not affect current configuration settings and are not displayed initially. If you type ?, you will see the login subcommands. These commands provide diagnostic and status information only.

Figure 3-2 Login Level Commands

4: Configuration Using XML

The SGX 5150 IoT device gateway provides an XML interface that you can use to configure SGX 5150 IoT device gateways. Every configuration setting that can be issued from the gateway's Web Manager interface and CLI can be specified using XML.

The SGX 5150 IoT device gateway can import and export configuration settings as an XML document known as an XML Configuration Record (XCR). An XCR can be imported or exported via the CLI, a Web browser, or FTP. An XCR can contain many configuration settings or just a few. For example, it might change all of the configurable parameters for a SGX 5150 IoT device gateway, or it may only change the baud rate for a single serial line. Using XCRs is a straightforward and flexible way to manage the configuration of multiple SGX 5150 IoT device gateways.

XML Configuration Record Document Type Definition

An XML document type definition (DTD) is a description of the structure and content of an XML document. It verifies that a document is valid. XCRs are exported using the DTD as shown in *Figure 4-4 DTD for XCRs*.

Figure 4-4 DTD for XCRs

```
<!DOCTYPE configrecord [
<!ELEMENT configrecord (configgroup+)>
<!ELEMENT configgroup (configitem+,configgroup*)>
<!ELEMENT configitem (value+)>
<!ELEMENT value (#PCDATA)>
<!ATTLIST configrecord version CDATA #IMPLIED>
<!ATTLIST configgroup name CDATA #IMPLIED>
<!ATTLIST configgroup instance CDATA #IMPLIED>
<!ATTLIST configitem name CDATA #IMPLIED>
<!ATTLIST value name CDATA #IMPLIED>
<!ATTLIST value name CDATA #IMPLIED>
]>
```

The SGX 5150 DTD rules state the following:

- The XML document element is a <configrecord> element. This is the root element.
- A <configrecord> must have one or more <configgroup> elements and can have a version attribute.
- ♦ A <configgroup> must have one or more <configitem> elements and can have name and instance attributes.
- A <configitem> element must have one or more <value> elements and can have a name attribute.
- A <value> element can have only data and can have a name attribute.
- The name attribute identifies a group, item, or value. It is always a quoted string.
- The instance attribute identifies the specific option, like the serial port number. The "instance" attribute is always a quoted string.

Notes:

- The name for each <configgroup> (specified with the name attribute) is the group name listed in the Web Manager XCR groups or with the "xcr list" CLI command. See the SGX 5150 IoT Device Gateway User Guide (available at www.Lantronix.com/support/documentation) for more information about the XCR groups.
- ◆ An empty or missing <value> element in each present <configgroup> clears the setting to its default.

Quick Tour of XML Syntax

Declaration

The first line, <?xml version="1.0" standalone="yes"?>, is called the XML declaration. It is required and indicates the XML version in use (normally version 1.0). The remainder of the file consists of nested XML elements, some of which have attributes and content.

Element Start and End Tags

An element typically consists of two tags: start tag and an end tag that surrounds text and other elements (element content). The start tag consists of a name surrounded by angle brackets, for example <configrecord>. The end tag consists of the same name surrounded by angle brackets, but with a forward slash preceding the name, for example </configrecord>. The element content can also contain other "child" elements.

Element Attributes

The XML element attributes that are name-value pairs included in the start tag after the element name. The values must always be quoted, using single or double quotes. Each attribute name should appear only once in an element.

Figure 4-5 XML Example shows an XML example which consists of a declaration (first line), nested elements with attributes and content.

Figure 4-5 XML Example

The SGX 5150 IoT device gateway uses the attributes in the following subsections to label the group configuration settings.

Record, Group, Item, and Value Tags

A <configgroup> is a logical grouping of configuration parameters and must contain one or more <configitem> elements. It must have a name attribute and may have an instance attribute.

A <configitem> is a specific grouping of configuration parameters relevant to its parent group. An item takes the name attribute and must contain one or more value elements. For example, the line group might have parameters such as baud rate, data bits, and parity.

A value may specify the value of a configuration parameter. It may contain the name attribute. In this example, a value of 9600 might be specified for baud rate; 7 may be specified for data bits, and even may be specified for parity.

A name attribute identifies the group, item, or value. It is always quoted (as are all XML attributes). For example, a group that contains serial port parameters has the name "line".

An instance attribute identifies which of several instances is being addressed. It is always quoted. For example, the serial port name (in the line configgroup) has the instance "1" to indicate serial port 1 or "2" to specify serial port 2...

The following figures show examples of XML configuration records and the use of the <configrecord>, <configreup>, <configitem>, and <value> XML elements.

Figure 4-6 XML Example

Figure 4-7 XML Example of Multiple Named Values

Figure 4-8 XML Example of Multiple Items

```
<configrecord version="0.1.0.0T0">
  <configgroup name="device">
     <configitem name="short name">
         <value>sgx5150</value>
     </configitem>
     <configitem name="long name">
         <value>Lantronix SGX5150</value>
     </configitem>
     <configitem name="serial number">
         <value>0080A3946149
     </configitem>
     </configitem><configitem name="firmware version">
        <value>8.1.0.1R16
     </configitem><configitem name="lantronix iot gateway os version">
        <value>1.0</value>
     </configitem>
  </configgroup>
```

Figure 4-9 XML Example with Multiple Groups

```
<configrecord version="0.1.0.0T0">
   <configgroup name="diagnostics">
      <configitem name="log">
         <value name="output">Disable</value>
      </configitem>
   </configgroup>
   <configgroup name="discovery">
      <configitem name="state">
         <value>enable</value>
      </configitem>
      <configitem name="upnp state">
         <value>enable</value>
      </configitem>
      <configitem name="upnp port">
         <value>30179</value>
      </configitem>
   </configgroup>
   <configgroup name="ethernet" instance="eth0">
      <configitem name="speed">
         <value>Auto</value>
      </configitem>
      <configitem name="duplex">
         <value>Auto</value>
      </configitem>
   </configgroup>
   <configgroup name="ftp server">
      <configitem name="state">
         <value>enable</value>
      </configitem>
   </configgroup>
```

Importing and Exporting an XML Configuration File

An XCR can be imported or exported using the following methods:

CLI

XCRs can be imported (captured) or exported (dumped) directly to a Telnet, SSH, or serial line CLI session. Capturing an XCR can be started by pasting a valid XCR directly into the CLI prompt. The SGX 5150 IoT device gateway immediately processes the configuration record, changing any settings specified. This can be done on any level, including the root. Special tags in the XML allow for providing root and enable level passwords so that this can also be done at the password prompt.

Web Browser

Web Manager can be used to import and export an XCR from an external source such as your local hard drive.

FTP

The SGX 5150 loT device gateway FTP server can export and import XCRs when an FTP get or put command on the filename (sgx5150.xcr for export, sgx5150_import.xcr for import; both are under the **pwxcr** directory) is requested. On export (FTP get of sgx5150.xcr), the FTP server obtains the current XCR from the SGX 5150 loT device gateway and sends it as a file. On import (FTP put of sgx5150_import.xcr), the FTP server processes the file by sending it directly to the XML engine. In both cases the SGX 5150 file system is not accessed. The files sgx5150.xcr and sgx5150_import.xcr are not read from or written to the file system. See the FTP section in the SGX 5150 loT Device Gateway User Guide (available at www.Lantronix.com/support/documentation.)

Best Practices

You can import or export an entire XCR, or just a portion of it, by specifying the group name and/or group instances. In the examples below, import and export operations are performed from the Web. See *Importing and Exporting an XML Configuration File* above to import and export using Web Manager, the CLI or FTP.

Caution:

Using Microsoft Word to edit and save an XCR will change the format of the file and make it incompatible with the SGX 5150 IoT device gateway. This is true even if the file is saved as Plain Text (.txt) or an XML Document (.xml). Notepad, a third party text editor, or a specialized XML editor should be used instead.

Exporting

Using the Web Manager interface, select from "Lines to Export" and "Groups to Export" filters and select from either "Export to Browser" or "Download (from link)" option. Save the output to your local file system.

Importing

Modify the exported file by removing "configgroup" records and filling in any required secret data such as passwords, and private keys. Using the Web Manager, import the updated clone by uploading it from your local file system.

XML Configuration Groups

Table 4-2 lists the supported SGX 5150 XML configuration record (XCR) groups, items, and possible value names and options in alphabetical order.

Note: Any instance of < in the table may be read as "less than" and any instance of > may be read as "greater than".

Table 4-2 XCR Groups

XML Status Record Groups and Items

Table 4-3 lists the supported SGX 5150 XML status record (XSR) groups and items. These groups and items show the status of the gateway in XML form and can only be exported. The XSR schema differs slightly from the XCR groups and items in that the XSR allows groups within groups.

Table 4-3 XSR Group and Items

Group Name	Item Name	Value Name	Valid Values

5: Configuration Using Web API

The Web APIs are restful APIs that allow access to a subset of gateway functions through a standard HTTP request.

Overview

SGX 5150 provides the following APIs:

Device Actions API

- Export Status Group Retrieve device status
- Export Configuration Group Retrieve device configuration
- Import Configuration Group Import device configuration
- Take Status Action Take device status action

File System API

- HTTP GET Read the contents of files and directories
- HTTP PUT Create new files and update existing files
- HTTP MKCOL Create new directories
- ♦ HTTP DELETE Remove files and directories from the file system

Device Actions API

The Device Actions API provide functions to export and import the configuration as well as export status and take a status action.

Export Status Group

An HTTP POST request can be sent to the device to retrieve status information.

Protocol: HTTPMethod: POST

URL: http://<hostname>/export/status

Parameters:

- optionalLine: Optional line index for line oriented XML groups
- optionalGroupList: Optional list of XML groups separated by semicolon. If omitted, all status groups will be returned.
- optionalBoolListOnly: Optional parameter if set to 'true' returns supported group list.

CURL example:

```
curl -u admin:PASSWORD http://<ip-address>/export/status -X POST
curl -u admin:PASSWORD http://<ip-address>/export/status -X POST -d
    "optionalGroupList=device"
```

Command Reference 58

Javascript example:

```
myXmlhttprequest.open(
    "POST",
    "/export/status",
    true
);
request.send(
    "optionalGroupList=Device");
```

Export Configuration Group

An HTTP POST request can be sent to the device to retrieve configuration information.

Protocol: HTTP

Method: POST

URL: http://<hostname>/export/config

Parameters:

- optionalLine: Optional line index for line oriented XML groups
- optionalGroupList: Optional list of XML groups separated by semicolon. If omitted, all status groups will be returned.
- optionalBoolListOnly: Optional parameter if set to 'true' returns supported group list.

CURL example:

Javascript example:

```
myXmlhttprequest.open(
    "POST",
    "/export/status",
    true
);
request.send(
    "optionalGroupList=Interface:wlan0");
```

Import Configuration Group

An HTTP POST request can be sent to the device to set configuration.

Protocol: HTTP

Method: POST

Content-Type: multipart/form-data

URL: http://<hostname>/import/config

Parameters:

configrecord: Content of configuration group in XML format.

CURL example (configuration is saved in a local file config.xml):

```
curl -u admin:PASSWORD http://<ip-address>/import/config -X POST --form
  configrecord=@config.xml
```

CURL example (configuration as part of command):

```
curl -u admin:PASSWORD http://<ip-address>/import/config -X POST --form-string
   'configrecord=<?xml version="1.0" standalone="yes"?>
<!-- Automatically generated XML -->
<!DOCTYPE configrecord [
<!ELEMENT configrecord (configgroup+)>
<!ELEMENT configgroup (configitem+)>
<!ELEMENT configitem (value+)>
<!ELEMENT value (#PCDATA)>
<!ATTLIST configrecord version CDATA #IMPLIED>
<!ATTLIST configgroup name CDATA #IMPLIED>
<!ATTLIST configgroup instance CDATA #IMPLIED>
<!ATTLIST configitem name CDATA #IMPLIED>
<!ATTLIST configitem instance CDATA #IMPLIED>
<!ATTLIST value name CDATA #IMPLIED>
<configrecord version = "0.1.0.1">
<configgroup name = "Access Point" instance = "ap0">
<configitem name = "SSID">
<value>MY DEVICE</value>
</configitem>
</configgroup>
</configrecord>'
HTTP example:
<form method="post" enctype="multipart/form-data" action="/import/config"</pre>
   target=" blank">
<input name="configrecord" type="file" size="32">
<input name="submit" type="submit" value="Import Configuration">
</form>
```

Take Status Action

An HTTP POST request can be sent to take a status action.

Protocol: HTTPMethod: POST

URL: http://<hostname>/action/status

Parameters:

- group: Required. The status group where action is defined.
- optionalGroupInstance: Optional instance of status group.
- optionalItem: Optional item of status group where action is defined.
- optionalItemInstance: Optional instance of status item.
- action: Required. The action to be taken.

Actions Definitions

The following are action definitions related to the Take Status Action API.

Note: When you see "NULL" after optionalGroupInstance, optionalItem, or optionalItemInstance, it means that item or instance should be omitted.

group "Clock" optional Group Instance NULL

optionalitem NULL optionaliteminstance NULL

action "Current Time <value>"

The format for setting time is YYYY-MM-DD hh:mm:ss, where the hours are in 24-hour format. The xPico Wi-Fi supports dates in the range 2007-01-01 00:00:00 to 2039-12-31 23:59:59 UTC.

group "Device" optional Group Instance NULL

optionalitem NULL optionaliteminstance NULL

action "Save"

The Save action works like the "write" command. Any cached configuration changes are committed, so they will apply after a reboot.

Without a Save, any cached configuration changes are lost after a reboot.

optionalItem NULL optionalItemInstance NULL

action "Reboot"

The Reboot action shuts the device down and restarts it. Any cached configuration changes (those which have not been saved) are lost.

optionalItem NULL optionalItemInstance NULL

action "Factory Defaults"

The Factory Defaults action restores the device configuration as it came from the factory. Any user changes to configuration are lost.

optionalitem NULL optionaliteminstance NULL

action "Firmware Upload"

The Firmware Upload action boots up the OTA loader. Then the OTA loader will allow you to browse for the file to upload.

group "Filesystem" optional Group Instance NULL

optionalItem NULL optionalItemInstance NULL

action "Format"

Format clears out the flash file system, preserving only system configuration data. Be careful! All other files are destroyed.

group "Interface" optional Group Instance Required

optionalItem NULL optionalItemInstance NULL

optionalHost NULL port Required optionalProtocol NULL (defaults to UDP)

data Required

action "Send"

The Send action causes the device to send a UDP/TCP packet to the bridged host.

The data bytes are hex encoded but sent as binary.

optionalItem NULL optionalItemInstance NULL

action "Renew"

The Renew action causes the device to drop its dynamic IP address and request an address from the DHCP server.

optionalItem NULL optionalItemInstance NULL

optionalMethod PushButton (default) or PIN

action "Start WPS"

The 'Start WPS' action causes the device start Wi-Fi Protected Setup. optionalMethod can be used to trigger a Push button or PIN type.

optionalItem NULL optionalItemInstance NULL

action "Cancel WPS"

The 'Cancel WPS' action causes the device cancel a running Wi-Fi Protected Setup task.

optionalItem NULL optionalItemInstance NULL

action "Trigger Access Point"

The 'Trigger Access Point' action causes the device to bring up its access point interface. The shutdown is as configured.

group "Line" optional Group Instance Required

optionalItem NULL optionalItemInstance NULL

action "Command <value>"

The Command action sends bytes to the Line and picks up bytes in response. The bytes are hex encoded.

Maximum number of characters to read (n) may be specified; default is unlimited.

Milliseconds total time limit (m) may be specified; default is 1000.

Terminating byte (t) may be specified; default is <None>.

Syntax of <value> is:

[n=<decimal number>][m=<decimal number>][t=<hex number>]<hex bytes to send>

First it must successfully open the Line; select Line Protocol of "None" so it may open it successfully.

optionalItem "Receiver" optionalItemInstance NULL

action "Receive"

The Receive action picks up characters from the Line.

First it must successfully open the Line; select Line Protocol of "None" so it may open it successfully.

optionalItem "Receiver" optionalItemInstance NULL

action "Hex Receive"

The Hex Receive action picks up bytes from the Line.

First it must successfully open the Line; select Line Protocol of "None" so it may open it successfully.

optionalItem "Transmitter" optionalItemInstance NULL

action "Transmit <value>"

The Transmit action sends characters to the Line.

First it must successfully open the Line; select Line Protocol of "None" so it may open it successfully.

optionalItem "Transmitter" optionalItemInstance NULL

action "Hex Transmit <value>"

The Hex Transmit action sends bytes to the Line.

First it must successfully open the Line; select Line Protocol of "None" so it may open it successfully.

group "NTP" optional Group Instance NULL

optionalItem NULL optionalItemInstance NULL

action "Sync"

The Sync action requests immediate clock synchronization with the NTP server.

group "Tunnel" optionalGroupInstance Required

optionalItem "Current Connection" optionalItemInstance Required

action "Kill"

The Kill action manually disconnects an active Tunnel connection.

CURL example:

```
curl -u admin:PASSWORD http://172.19.100.125/action/status -X POST -d
   "group=Interface&optionalGroupInstance=wlan0&action=Renew"
```

Javascript example:

```
myXmlhttprequest.open(
    "POST",
    "/action/status",
    true
);
request.send(
    " group=Interface&optionalGroupInstance=wlan0&action=Renew "
);
```

File System Web API

The File System Web API is a RESTful cloud API that allows basic manipulation of file system nodes (files and directories). It is intended to support web-based file system access without the need of a browser, and as such can be used in scripts with HTTP programs such as cURL.

Supported file system node operations are implemented via various HTTP request types. The File System Web API uses standard HTTP requests as well as HTTP extensions from the Web Distributed Authoring and Versioning (WebDAV) standard.

Four principal HTTP requests are implemented by the API: GET, PUT, MKCOL, and DELETE.

HTTP GET

Used to read the contents of files and directories in the file system.

```
URL: http://<hostname>/fs/[node]
```

Where node can be a file, in which case the file content is returned, or a directory, in which case an XML-formatted list of directory objects is returned.

HTTP Response Codes:

200: Success

404: Node not found

Example:

```
# curl -s -u admin:PASSWORD http://192.168.0.1/fs/embedded
<!-- Automatically generated XML -->
<!DOCTYPE directorylist [</pre>
<!ELEMENT dentry (name, size) >
<!ELEMENT name (#CDATA)>
<!ELEMENT size (#CDATA)>
<!ATTLIST dentry type CDATA #IMPLIED>
<!ATTLIST directorylist path CDATA #IMPLIED>
<directorylist path = "/embedded">
<dentry type = directory>
<name>main</name>
<size>0</size>
</dentry>
<dentry type = directory>
<name>modem emulation</name>
<size>0</size>
</dentry>
<dentry type = directory>
<name>monitor</name>
<size>0</size>
</dentry>
<dentry type = directory>
<name>ntp</name>
<size>0</size>
</dentry>
<dentry type = directory>
<name>query port</name>
<size>0</size>
</dentry>
<dentry type = directory>
<name>tunnel</name>
<size>0</size>
</dentry>
<dentry type = directory>
<name>user data</name>
<size>0</size>
</dentry>
</directorylist>
```

HTTP PUT

Used to place new files in the file system and update existing files. Directories cannot be created using PUT; the MKCOL request must be used.

Note that PUT will overwrite an existing file by the same name.

URL: http://<hostname>/fs/[path]/file

HTTP Response Codes:

201: File successfully created. This code is part of the WebDAV standard.

509: Not enough space

500: Other failure

Example:

```
# ls -1
-rw-r--r-- 1 user wheel 166 Oct 22 2013 file.txt
# curl -s -u admin:PASSWORD http://192.168.0.1/fs/ -T file.txt
# curl -s -u admin:PASSWORD http://192.168.0.1/fs/
<!-- Automatically generated XML -->
<!DOCTYPE directorylist [
<!ELEMENT dentry (name, size) >
<!ELEMENT name (#CDATA)>
<!ELEMENT size (#CDATA) >
<!ATTLIST dentry type CDATA #IMPLIED>
<!ATTLIST directorylist path CDATA #IMPLIED>
1 >
<directorylist path = "/embedded">
<dentry type = file>
<name>file.txt</name>
<size>166</size>
</dentry>
</directorylist>
```

HTTP MKCOL

Used to create new directories (not files) in the file system. MKCOL ?is an HTTP extension from the WebDAV standard.

URL: http://<hostname>/fs/[path]/directory

HTTP Response Codes:

201: Directory successfully created. This code is part of the WebDAV standard.

409: Directory already exists

500: Other failure

Example:

```
# curl -s -u admin:PASSWORD http://192.168.0.1/fs/dir1 -X MKCOL
# curl -s -u admin:PASSWORD http://192.168.0.1/fs/
<!-- Automatically generated XML -->
<!DOCTYPE directorylist [
<!ELEMENT dentry (name, size) >
<!ELEMENT name (#CDATA) >
<!ELEMENT size (#CDATA) >
<!ATTLIST dentry type CDATA #IMPLIED>
|>
<!ATTLIST directorylist path CDATA #IMPLIED>
|>
<directorylist path = "/embedded">
<dentry type = file>
<name>file.txt</name>
<size>166</size>
```

```
</dentry>
<dentry type = directory>
<name>dir1</name>
<size>0</size>
</dentry>
</directorylist>
```

HTTP DELETE

Used to remove files and directories from the file system.

URL: http://<hostname>/fs/[path] /node

Where node can be either a file or directory.

HTTP Response Codes:

204: No content (node successfully removed). This code is part of the WebDAV standard.

404: Node not found

500: Other failure

Example:

6: Commands and Levels

Click the level in the tree structure and it will take you to the command list for that level.

Table 5-4 Commands and Levels

Enables the tunneling server to always accept tunneling connections. Enables the tunneling server to accept tunneling connections only when a character is received mode any character is decept mode disable Disables accept mode tunneling. Enables the tunneling server to accept tunneling connections when the modem control asserted is asserted. Enables the tunneling server to accept tunneling connections when the modem control pin is asserted. Enables modem medem emulation Enables modem emulation for accept mode tunneling. Enables modem emulation for accept mode tunneling. Enables accept mode modem emulation for accept mode tunneling. Enables accept mode modem emulation for accept mode tunneling. Enables accept mode modem emulation for accept mode tunneling. Enables accept mode modem emulation for accept mode tunneling. Enables accept mode modem emulation for accept mode tunneling. Enables accept mode tunneling when the configured start character is received on the line. Sets the accept tunnel AES decrypt key with up to 16 bytes. Each byte is represented by a single character. Note that quotes must enclose the value if it contains spaces. Sets the accept tunnel AES decrypt key with up to 16 bytes. Each byte is represented by a single character. Note that quotes must enclose the value if it contains spaces. Base encrypt key text sets accept tunnel AES encrypt key with up to 16 bytes. Each byte is represented by a single character. Note that quotes must enclose the value if it contains spaces with a single character. Note that quotes must enclose the value if it contains spaces. Enables accept tunnel AES encrypt key with up to 16 bytes. Each byte is represented by a single character. Note that quotes must enclose the value if it contains spaces. Enables the accept tunnel AES encrypt key with up to 16 bytes. Each byte is represented by a single character. Note that quotes must enclose the value if it contains spaces. Enables the default accept mode tunneling. Enables the default server to the tunne	accept (tunnel-accept:<	line>) level commands (<line> is the number of the line)</line>
Enables the tunneling server to accept tunneling connections only when a character is received mode disable accept mode disable accept mode modem control asserted Enables modem mediance the tunneling server to accept tunneling connections when the modem control pin is asserted. Enables modem mediance the tunneling server to accept tunneling connections when the modem control pin is asserted. Enables modem methalition accept mode start character is received on the line. Enables accept mode tunneling when the configured start character is received on the line. Sets the accept tunnel AES decrypt key with up to 16 bytes. Each byte is represented by two adjacent hex digits. Bytes may run together or be separated by optional punctuation: 123ABC "12 3A BC" 12,3A,BC 12.3a,Bc		
Enables the tunneling server to accept tunneling connections when the modem control pin is asserted. Enables modem emulation for accept mode tunneling. Enables modem emulation for accept mode tunneling. Enables accept mode start character accept mode start character accept mode start character ass decrypt key <nexa- decimal=""> Sets the accept tunnel AES decrypt key with up to 16 bytes. Each byte is represented by two adjacent hex digits. Bytes may run together or be separated by optional punctuation: 123ABC *12 3A BC* 12,3A,BC 12.3a.bc 12:3a:bc Note that quotes must enclose the value if it contains spaces. Sets the accept tunnel AES decrypt key with up to 16 bytes. Each byte is represented by a single character. Note that quotes must enclose the value if it contains spaces. Sets the accept tunnel AES encrypt key with up to 16 bytes. Each byte is represented by a single character. Note that quotes must enclose the value if it contains spaces. Sets the accept tunnel AES encrypt key with up to 16 bytes. Each byte is represented by a vicex/p single character. Note that quotes must enclose the value if it contains spaces. Sets the accept tunnel AES encrypt key with up to 16 bytes. Each byte is represented by a single character. Note that quotes must enclose the value if it contains spaces. Sets the accept tunnel AES encrypt key with up to 16 bytes. Each byte is represented by a single character. Note that quotes must enclose the value if it contains spaces. Sets the accept tunnel AES encrypt key with up to 16 bytes. Each byte is represented by a single character. Note that quotes must enclose the value if it contains spaces. Sets the accept tunnel AES encrypt key with up to 16 bytes. Each byte is represented by a single character. Note that quotes must enclose the value if it contains spaces. Sets the accept unnel AES encrypt key with up to 16 bytes. Each byte is represented by a single character. Note that quotes must enclose the value if it contains spaces. Sets an email profile to use to send an email</nexa->	accept mode any character	
is asserted. emulation accept mode start character accept mode accept mode start character accept mode	accept mode modem control asserted	i i
aceter assedectypt key <*hexadecimal> assedectypt key <*hexadecimal> decimal> Sets the accept tunnel AES decrypt key with up to 16 bytes. Each byte is represented by two adjacent hex digits. Bytes may run together or be separated by optional punctuation: 123ABC *12 3A BC* 12.3A,BC 12.3a,bc 12:3a:bc Note that quotes must enclose the value if it contains spaces. Sets the accept tunnel AES decrypt key with up to 16 bytes. Each byte is represented by a single character. Note that quotes must enclose the value if it contains spaces. Sets the accept tunnel AES encrypt key with up to 16 bytes. Each byte is represented by two adjacent hex digits. Bytes may run together or be separated by optional punctuation: 123ABC *12 3A BC* 12.3A,BC 12.3a.bc 12:3a:bc Note that quotes must enclose the value if it contains spaces. Sets the accept tunnel AES encrypt key with up to 16 bytes. Each byte is represented by two adjacent hex digits. Bytes may run together or be separated by optional punctuation: 123ABC *12:3A BC* 12:3a:bc Note that quotes must enclose the value if it contains spaces. Sets the accept tunnel AES encrypt key with up to 16 bytes. Each byte is represented by a single character. Note that quotes must enclose the value if it contains spaces. Sets the accept tunnel AES encrypt key with up to 16 bytes. Each byte is represented by a single character. Note that quotes must enclose the value if it contains spaces. Sets the accept tunnel AES encrypt key with up to 16 bytes. Each byte is represented by a single character. Note that quotes must enclose the value if it contains spaces. Sets the accept tunnel AES encrypt key with up to 16 bytes. Each byte is represented by a single character. Note that quotes must enclose the value if it contains spaces. Sets the accept tunnel AES encrypt key with up to 16 bytes. Each byte is represented by a single character. Note that quotes must enclose the value if it contains spaces. Sets an email profile to use to send an email alert upon establishing an accept mode tunnel. en	accept mode modem emulation	Enables modem emulation for accept mode tunneling.
two adjacent hex digits. Bytes may run together or be separated by optional punctuation: 123ABC "12 3A BC" 12,3A,BC 12.3a.bc 12:3a:bc Note that quotes must enclose the value if it contains spaces. aes decrypt key text single character. Note that quotes must enclose the value if it contains spaces. Sets the accept tunnel AES decrypt key with up to 16 bytes. Each byte is represented by a single character. Note that quotes must enclose the value if it contains spaces. Sets the accept tunnel AES encrypt key with up to 16 bytes. Each byte is represented by two adjacent hex digits. Bytes may run together or be separated by optional punctuation: 123ABC "12 3A BC" 12,3A,BC 12.3a.bc 12:3a:bc Note that quotes must enclose the value if it contains spaces. Sets the accept tunnel AES encrypt key with up to 16 bytes. Each byte is represented by a single character. Note that quotes must enclose the value if it contains spaces. Sets the accept tunnel AES encrypt key with up to 16 bytes. Each byte is represented by a single character. Note that quotes must enclose the value if it contains spaces. Sets the accept tunnel AES encrypt key with up to 16 bytes. Each byte is represented by a single character. Note that quotes must enclose the value if it contains spaces. Sets the accept tunnel AES encrypt key with up to 16 bytes. Each byte is represented by a single character. Note that quotes must enclose the value if it contains spaces. Sets the accept tunnel AES encrypt key with up to 16 bytes. Each byte is represented by a single character. Note that quotes must enclose the value if it contains spaces. Sets the accept tunnel AES encrypt key with up to 16 bytes. Each byte is represented by a single character. Note that quotes must enclose the value if it contains spaces. Sets the accept tunnel AES encrypt key with up to 16 bytes. Each byte is represented by a single character. Note that quotes must enclose the value if it contains spaces. Sets an email profile to use to send an email alert upon establishing an accept mod	accept mode start character	Enables accept mode tunneling when the configured start character is received on the line.
single character. Note that quotes must enclose the value if it contains spaces. Sets the accept tunnel AES encrypt key with up to 16 bytes. Each byte is represented by two adjacent hex digits. Bytes may run together or be separated by optional punctuation: 123ABC *12.3A,BC 12.3a.bc 12.3a.bc Note that quotes must enclose the value if it contains spaces. Sets the accept tunnel AES encrypt key with up to 16 bytes. Each byte is represented by a single character. Note that quotes must enclose the value if it contains spaces. Sets the accept tunnel AES encrypt key with up to 16 bytes. Each byte is represented by a single character. Note that quotes must enclose the value if it contains spaces. Block network disable Forwards (tunnels) network data in accept mode tunneling. Discards all data coming in from the accept mode tunnel before forwarding it to the serial interface (generally used for debugging). Forwards (tunnels) serial data in accept mode tunneling. Discards all data coming in from the serial interface before forwarding it to the accept mode tunnel (generally used for debugging). Clears the screen. Clears the screen. Credentials <text> Selects the RSA/DSA certificates by name for the SSL server. default accept mode Restores the default accept mode as 'always'. Uses the default port number as the local port for accept mode tunneling. The default port is 10000 + n, where 'n' is the line number for this tunnel. default top keep alive default top keep alive peraluts the accept mode start character. Defaults the accept mode start character. default top keep alive probes Defaults the TCP keep alive probes. Peraluts the TCP keep alive probes. Sets an email profile to use to send an email alert upon establishing an accept mode tunnels error the number = the number of the email profile to use. flush serial disable Characters already in the serial data buffer are retained upon establishing an accept mode	exit	Returns to the tunnel level.
	flush serial disable	Characters already in the serial data buffer are retained upon establishing an accept mode

	tunneling connection.
flush serial enable	Flushes the serial data buffer upon establishing an accept mode tunneling connection.
flush start character dis-	Enables forwarding of the accept start character into the network.
flush start character ena- ble	Disables forwarding of the accept start character into the network.
initial send binary ry>	Sets the accept tunnel Initial Send text allowing for binary characters. string in binary format that will be sent out the network upon connection. Within [] use binary decimal up to 255 or hex up to 0xFF.
initial send set <text></text>	Sets the accept tunnel Initial Send text. <text> = ascii string that will be sent out the network upon connection.</text>
kill connection	Disconnects the active accept mode tunneling connection.
local port <number></number>	Sets the port to use for accept mode tunneling. <number> = number of the port to use.</number>
no aes decrypt key	Removes the accept tunnel AES decrypt key.
no aes encrypt key	Removes the accept tunnel AES encrypt key.
no credentials	Clears the RSA/DSA certificate selection for the SSL server.
no email connect	Discontinues sending email alerts upon establishing an accept mode tunnel.
no email disconnect	Discontinues sending email alerts upon closing an accept mode tunnel.
no initial send	Removes the accept tunnel Initial Send string.
password	Enters the next lower level.
protocol ssh	Uses SSH protocol for accept mode tunneling.
protocol ssl	Uses SSL protocol for accept mode tunneling.
protocol tcp	Uses TCP protocol for accept mode tunneling.
protocol tcp aes	Uses TCP protocol with AES encryption for accept mode tunneling.
protocol telnet	Uses Telnet protocol (with IAC) for accept mode tunneling.
secure protocols ssl3 disable	Disables the protocol.
secure protocols ssl3 enable	Enables the protocol.
secure protocols tls1.0 disable	Disables the protocol.
secure protocols tls1.0 enable	Enables the protocol.
secure protocols tls1.1 disable	Disables the protocol.
secure protocols tls1.1 enable	Enables the protocol.
secure protocols tls1.2 disable	Disables the protocol.
secure protocols tls1.2 enable	Enables the protocol.
show	Displays the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
show status	Displays tunnel accept status.
start character <control></control>	Sets the accept mode start character. The character may be input as text, control, decimal, or hex. A control character has the form <pre><control>C</control></pre> . A decimal value character has the form <pre>\99</pre> . A hex value character has the form <pre>0xFF</pre> .
tcp keep alive <millisec- onds></millisec- 	Sets the TCP keep alive time. This is the initial keep alive timeout. <milliseconds> = timer value, in milliseconds.</milliseconds>

Returns to the config level. Displays the current configuration. Displays the last 20 commands entered during the current CLI session. Displays the Bluetooth statistics. Disables Bluetooth. Enables Bluetooth. Stores the current configuration in permanent memory. ooth-line:1) level commands Continuously displays line statistics. Enters the bluetooth serial level. line> = number of the line (bluetooth serial port) to be configured. Sets the serial counters to zero. Clears the screen. Sets the current line to always be in command mode. Disables user-defined serial boot string to be echoed in the CLI.

string <string></string>	possible binary characters. Within [] use binary decimal up to 255 or hex up to 0xFF. Within {} specify decimal milliseconds time delay.
command mode signon message <i><string></string></i>	Sets a sign-on message that is sent from the serial port when the device boots and when the line is in command mode. <string> = text with possible binary characters. Within [] use binary decimal up to 255 or hex up to 0xFF.</string>
command mode wait time <milliseconds></milliseconds>	Sets boot-up wait time for command mode serial string. <milliseconds> = wait time.</milliseconds>
default line mode	Restores the default line mode.
default threshold	Restores the factory default threshold.
exit	Exits to the enable level
gap timer <milliseconds></milliseconds>	Sets the gap timer in milliseconds. If some data has been received, it will be forwarded after this time since the last character.
interface bluetooth- rfcomm	Sets the line interface to bluetooth-rfcomm.
kill session	Kills command mode session on the Line
line	Enters the line level. line> = number of the line (serial port) to be configured.
line mode serial device	Sets the line to serial device mode.
name <text></text>	Sets the name for this line.
no clear line counters	Restores the serial counters to the aggregate values.
no command mode	Disables command mode for the current line.
no command mode signon message	Clears the signon message displayed at boot time and when entering command mode.
no gap timer	Removes the gap timer, so forwarding depends on the line speed.
no name	Removes the name of this line.
protocol none	Uses no protocol on the line.
protocol tunnel	Applies tunnel protocol on the line.
show	Displays the current status.
show bluetooth line	Displays the current configuration.
show command mode	Shows the command mode settings for the current line.
show history	Displays the last 20 commands entered during the current CLI session.
show statistics	Shows the line statistics.
state disable	Disables the line so data cannot be sent/received.
state enable	Enables the line so data can be sent/received.
terminal	Enters the configure-terminal level. line> = number of the terminal line (serial port) to be configured.
terminal network	Enters the configure-terminal level for the network.
threshold bytes>	Sets the threshold in bytes. After this many bytes are received, they are forwarded without delay.
tunnel	Enters the tunnel level. line> = number of the tunnel line (serial port) to be configured.
usb	Enters the usb level. line> = number of the line (usb port) to be configured.
write	Stores the current configuration in permanent memory.
bridge 1 (config-bridge:	br0) level commands
auto detect ip address disable	Disables learning the IPv4 address of the bridged client.
auto detect ip address enable	Enables learning the IPv4 address of the bridged client.
auto detect ipv6 address disable	Disables learning the global IPv6 address of the bridged client.

auto detect ipv6 address enable	Enables learning the global IPv6 address of the bridged client.
bridging initial scan interval <seconds></seconds>	Sets the scan interval before learning the IP address of the bridged client.
bridging ip address <ip address=""></ip>	Sets the Bridging IP Address.
bridging ipv6 address <ipv6 address=""></ipv6>	Sets the Bridging IPv6 Address. IPv6 addresses are written in eight groups of four hexadecimal digits separated by colons, such as 2001:0db8:85a3:0000:0000:8a2e:0370:7334 Network address ranges are written in CIDR notation. A network is denoted by the first address in the block (ending in all zeroes), a slash (/), and a decimal value equal to the size in bits of the prefix
bridging mode host	Sets the bridging mode to 'Host'.
bridging mode network	Sets the bridging mode to 'Network'.
bridging mode static network	Sets the bridging mode to 'Static Network'.
bridging scan interval <seconds></seconds>	Sets the scan interval after learning the IP address of the bridged client.
clrscrn	Clears the screen.
default bridging initial scan interval	Restores the default initial scan interval.
default bridging mode	Restores the default bridging mode.
default bridging scan interval	Restores the default scan interval.
default ethernet interface	Restores the default Bridging ethernet interface.
ethernet interface <text></text>	Sets the Bridging ethernet interface.
exit	Exits to the config level.
network access for gate- way disable	Disables network access for gateway in transparent bridging mode.
network access for gate- way enable	Enables network access for gateway in transparent bridging mode.
no bridging ip address	Removes the Bridging MAC Address.
no bridging ipv6 address	Removes the Bridging IPv6 Address.
no bridging mac address	Removes the Bridging MAC Address.
show	Displays the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
show statistics	Show bridge statistics
show status	Show bridge status
state disable	Disables bridging.
state enable	Enables bridging.
transparent mode disable	Disables transparent mode.
transparent mode enable	Enables transparent mode.
write	Stores the current configuration in permanent memory.
choice 1 (config-wlan-ch	noice:wlan0:1) level commands
apply wlan	Try out WLAN settings without saving them to Flash. If the settings do not work, when you reboot the device, it will still have the original settings.
clrscrn	Clears the screen.
exit	Exits to the next higher level.
no profile	Removes reference to the profile.

mustile stands	Colocte a profile tout some of the profile
profile <text></text>	Selects a profile. <text> = name of the profile.</text>
show	Shows the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
write	Stores the current configuration in permanent memory.
	hoice:wlan0:2) level commands
apply wlan	Try out WLAN settings without saving them to Flash. If the settings do not work, when you reboot the device, it will still have the original settings.
clrscrn	Clears the screen.
exit	Exits to the next higher level.
no profile	Removes reference to the profile.
profile <text></text>	Selects a profile. <text> = name of the profile.</text>
show	Shows the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
write	Stores the current configuration in permanent memory.
choice 3 (config-wlan-cl	noice:wlan0:3) level commands
apply wlan	Try out WLAN settings without saving them to Flash. If the settings do not work, when you reboot the device, it will still have the original settings.
clrscrn	Clears the screen.
exit	Exits to the next higher level.
no profile	Removes reference to the profile.
profile <text></text>	Selects a profile. <text> = name of the profile.</text>
show	Shows the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
write	Stores the current configuration in permanent memory.
choice 4 (config-wlan-cl	noice:wlan0:4) level commands
apply wlan	Try out WLAN settings without saving them to Flash. If the settings do not work, when you reboot the device, it will still have the original settings.
clrscrn	Clears the screen.
exit	Exits to the next higher level.
no profile	Removes reference to the profile.
profile <text></text>	Selects a profile. <text> = name of the profile.</text>
show	Shows the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
write	Stores the current configuration in permanent memory.
cli (config-cli) level com	mands
clrscrn	Clears the screen.
default inactivity timeout	The default inactivity timeout will apply to CLI sessions.
default quit connect line	Restores the default string to quit the 'connect line', 'telnet', and 'ssh' commands.
enable level password <text></text>	Sets the enable-level password.
exit	Exits to the configuration level.
	Onto the investigation of the time and the all OLL and the
inactivity timeout <minutes></minutes>	Sets the inactivity timeout for all CLI sessions.
-	No password required for Line CLI users.
<pre><minutes> line authentication disa- ble</minutes></pre>	

no enable level password	Removes the enable-level password.
no inactivity timeout	No inactivity timeout will apply to CLI sessions.
quit connect line <con- trol></con- 	Sets the string used to quit the 'connect line', 'telnet', and 'ssh' commands. The characters may be input as text or control. A control character has the form <control>C.</control>
show	Displays the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
ssh	Change to menu level for SSH configuration and status.
telnet	Change to menu level for Telnet configuration and status.
write	Stores the current configuration in permanent memory.
client (ssh-client) level o	commands
clrscrn	Clears the screen.
default user <username> command</username>	Restore the user command to the default login shell
delete all known hosts	Remove all known hosts
delete all users	Remove all users
delete known host <server></server>	Remove known host
delete user <username></username>	Delete the named user
exit	Exits to the ssh level.
known host <server></server>	Set known host RSA or DSA key
no known host <server> dsa</server>	Remove known host DSA key
no known host <server></server>	Remove known host RSA key
no user <username> dsa</username>	Remove user DSA key
no user <username> rsa</username>	Remove user RSA key
show	Show SSH Client settings
show history	Displays the last 20 commands entered during the current CLI session.
show known host <serv- er></serv- 	Show known host RSA and DSA keys
show user <username></username>	Show information for a user
user <username></username>	Set username and RSA or DSA keys
user <username> com- mand <command/></username>	Customizes the user command
user <username> generate dsa 1024</username>	Generate DSA public and private keys
user <username> generate dsa 2048</username>	Generate DSA public and private keys
user <username> generate dsa 4096</username>	Generate DSA public and private keys
user <username> generate dsa 512</username>	Generate DSA public and private keys
user <username> generate dsa 768</username>	Generate DSA public and private keys
user <username> generate rsa 1024</username>	Generate RSA public and private keys
user <username> generate rsa 2048</username>	Generate RSA public and private keys

user <username> generate rsa 4096</username>	Generate RSA public and private keys
user <username> generate rsa 512</username>	Generate RSA public and private keys
user <username> generate rsa 768</username>	Generate RSA public and private keys
user <username> pass- word <password></password></username>	Set username with password and optional RSA or DSA keys
write	Stores the current configuration in permanent memory.
clock (config-clock) leve	el commands
clock set <time(hh:mm:ss)> <day (1-31)> <month text=""> <year></year></month></day </time(hh:mm:ss)>	Sets the system clock.
clock timezone	Shows possible time zone names.
clock timezone <time zone=""></time>	Sets the timezone to be displayed. Use "clock timezone" to show choices.
clrscrn	Clears the screen.
default clock timezone	Restores the default timezone, which is UTC.
default synchronization method	Restores the default time synchronization method (Manual).
exit	Exits to the configuration level.
ntp	Enters the next lower level.
show	Displays the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
show system clock	Displays the system clock.
synchronization method manual	Set time manually.
synchronization method sntp	Synchronize time with a NTP server.
write	Stores the current configuration in permanent memory.
configure (config) level	commands
access point	Enters the access point level.
action	Enters the config action level.
applications	Enters the applications level.
arp	Changes to the command level for ARP configuration and status.
bluetooth	Enters the Bluetooth level.
bridge <instance></instance>	Changes to the bridge configuration level.
cli	Change to menu level for CLI configuration and status
clock	Change to menu level for Clock configuration and status
clrscrn	Clears the screen.
diagnostics	Enters the diagnostics level.
discovery	Enters the discovery level.
exit	Exits to the enable level.
ftp	Enters the ftp level.
gateway	Enters the gateway level.
gre <instance></instance>	Change to gre level.
host <number></number>	Change to config host level

http	Enters the http level.
icmp	Changes to the command level for ICMP configuration and status.
if <instance></instance>	Changes to the interface configuration level.
ip	Changes to the command level for IP configuration and status.
kill ssh <session></session>	Kills SSH session with index from "show sessions"
kill telnet <session></session>	Kills Telnet session with index from "show sessions"
mach10	Enters the mach10 level.
modbus	Changes to the modbus configuration level.
rss	Change to menu level for RSS configuration and status
security	Enters the security level.
sftp	Enters the sftp level.
show	Displays system information.
show history	Displays the last 20 commands entered during the current CLI session.
show lines	Displays line information.
smtp	Changes to the command level for SMTP configuration and status.
snmp	Enters the snmp level.
syslog	Enters the syslog level.
terminal	Enters the configure-terminal level. line> = number of the terminal line (serial port) to be configured.
terminal network	Enters the configure-terminal level for the network.
user management	Enters the config-user-management level.
vpn <instance></instance>	Change to vpn level.
wlan profiles	Enters the WLAN profiles configuration level.
wiaii pioliles	Efficia the WEAR profiles configuration level.
write	Stores the current configuration in permanent memory.
write	· -
write	Stores the current configuration in permanent memory.
write connect (tunnel-connec	Stores the current configuration in permanent memory. t:) level commands (is the number of the line)

Enables the tunneling server to make tunneling connections when the modem control pin is asserted. Enables modem emulation for connect mode tunneling. Enables connect mode tunneling when the configured start character is received on the line. Restores the default connect mode as 'disable'. Connects to the first host in the list that accepts the connection. Uses a random port number as the local port for establishing tunneling connections to oth-

default start character	Defaults the connect mode start character.
email connect < number>	Sets an email profile to use to send an email alert upon establishing a connect mode tunnel. <number> = the number of the email profile to use.</number>
email disconnect < num- ber>	Sets an email profile to use to send an email alert upon closing a connect mode tunnel. <pre><number> = the number of the email profile to use.</number></pre>
exit	Returns to the tunnel level.
flush serial disable	Characters already in the serial data buffer are retained upon establishing a connect mode tunneling connection.
flush serial enable	Flushes the serial data buffer upon establishing a connect mode tunneling connection.
flush start character disable	Enables forwarding of the connect start character into the network.
flush start character ena- ble	Disables forwarding of the connect start character into the network.
host <instance></instance>	Enters the next lower level. Specify the instance for the next lower level.
host mode sequential	Connects to the first host in the list that accepts the connection.
host mode simultaneous	Selects simultaneous connections to all hosts on the host list.
kill connection	Disconnects the active connect mode tunneling connection or connections.
local port <number></number>	Sets a specific port for use as the local port. <number> = the number of the port to use.</number>
no email connect	Discontinues sending email alerts upon establishing a connect mode tunnel.
no email disconnect	Discontinues sending email alerts upon closing a connect mode tunnel.
promote host <number></number>	Promotes the identified host, exchanging it place with the host above it, to adjust the order of the defined hosts.
reconnect time <milliseconds></milliseconds>	Sets the reconnect time value for tunneling connections established by the device in milliseconds. <milliseconds> = timeout in milliseconds.</milliseconds>
show	Displays the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
show status	Displays tunnel connect status.
start character <control></control>	Sets the connect mode start character. The character may be input as text, control, decimal, or hex. A control character has the form <control>C. A decimal value character has the form \99. A hex value character has the form 0xFF.</control>
write	Stores the current configuration in permanent memory.
connection 1 (config-ma	ich10-connection:1) level commands
clrscrn	Clears the screen.
default host	Restores the Hostname or IP address of Mach 10.
default local port	Clears the local port for Mach10 client.
default mqtt host	Restores the Hostname or IP address of MQTT server.
default mqtt local port	Clears the local port for Mach10 MQTT client.
default mqtt port	Restores the Port of MQTT server.
default port	Restores the Port of Mach 10.
default proxy port	Restores the Port of proxy server.
default proxy type	Restores the default Proxy server type (SOCKS5).
exit	Exits to the next higher level.
host <text></text>	Sets the Hostname or IP address of Mach 10.
local port <number></number>	Sets the local port for Mach10 client. When configured, a total of 16 consecutive ports will be reserved.
mqtt host <text></text>	Sets the Hostname or IP address of MQTT server.
mqtt local port <number></number>	Sets the local port for Mach10 MQTT client. When configured, a total of 32 consecutive ports will be reserved.

mqtt port <number></number>	Sets the Port of MQTT server.
mqtt security disable	Disables SSL for MQTT.
mqtt security enable	Enables SSL for MQTT.
mqtt state disable	Disables MQTT.
mqtt state enable	Enables MQTT.
no proxy host	Restores the Hostname or IP address of the proxy server.
no proxy password	Restores the password for proxy server.
no proxy username	Clears the user name for the proxy server.
port < <i>number</i> >	Sets the Port of Mach 10.
proxy host <text></text>	Sets the Hostname or IP address of the proxy server.
proxy password <text></text>	Sets the password the proxy server.
proxy port < number>	Sets the Port of the proxy server.
proxy type socks5	Sets the Proxy server type to SOCKS5
proxy username <text></text>	Sets the user name for the proxy server.
secure port disable	Disables HTTPS for Mach10 client.
secure port enable	Enables HTTPS for Mach10 client.
show	Shows the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
use proxy disable	Disables use of proxy server for this connection.
use proxy enable	Enables use of proxy server for this connection.
validate certificates disable	Disables certificate validation for Mach10 client.
validate certificates ena- ble	Enables certificate validation for Mach10 client.
	Enables certificate validation for Mach10 client. Stores the current configuration in permanent memory.
ble write	
ble write	Stores the current configuration in permanent memory.
write connection 1 (config-act	Stores the current configuration in permanent memory. tion-http_post-connection:wlan0 link state change:1) level commands
ble write connection 1 (config-act	Stores the current configuration in permanent memory. tion-http_post-connection:wlan0 link state change:1) level commands Clears the screen.

url <text></text>	Sets HTTP request URL following IP address or hostname.
username <text></text>	Sets the Username used to logon to HTTP server.
write	Stores the current configuration in permanent memory.
connection 2 (config-ac	tion-ftp_put-connection:on scheduled reboot:2) level commands
clrscrn	Clears the screen.
default filename	Sets default FTP remote Filename.
default local port	Uses a random port number as the local port.
default port	Sets default Port number.
default protocol	Sets default FTP Protocol.
default username	Sets default Username.
exit	Exits to the next higher level.
filename <text></text>	Sets FTP remote Filename.
host <text></text>	Sets FTP server IP address or hostname to be connected to.
local port <number></number>	Sets a specific port for use as the local port. <number> = the number of the port to use.</number>
no host	Clears FTP server IP address or hostname.
no password	Sets default Password.
password <text></text>	Sets the Password used to logon to FTP server.
I .	
port <number></number>	Sets the Port number which FTP server is listening to.
port <number> protocol ftp</number>	Sets the Port number which FTP server is listening to. Selects FTP Protocol.
<u>'</u>	
protocol ftp	Selects FTP Protocol.
protocol ftp protocol ftps	Selects FTP Protocol. Selects FTPS Protocol.

write	Stores the current configuration in permanent memory.
connection 2 (config-ac	tion-http_post-connection:eth0 link state change:2) level commands
clrscrn	Clears the screen.
default local port	Uses a random port number as the local port.
default port	Sets default Port number.
default protocol	Sets default HTTP Protocol.
exit	Exits to the next higher level.
host <text></text>	Sets HTTP server IP address or hostname to be connected to.
local port <number></number>	Sets a specific port for use as the local port. <number> = the number of the port to use.</number>
no host	Clears HTTP server IP address or hostname.
no password	Clears the Password.
no url	Clears HTTP request URL.
no username	Clears the Username.
password <text></text>	Sets the Password used to logon to HTTP server.
port <number></number>	Sets the Port number which HTTP server is listening to.
protocol http	Selects HTTP Protocol.
protocol https	Selects HTTPS Protocol.
show	Shows the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
url <text></text>	Sets HTTP request URL following IP address or hostname.
username <text></text>	Sets the Username used to logon to HTTP server.
write	Stores the current configuration in permanent memory.
connection 2 (config-ac	tion-ftp_put-connection:eth0 link state change:2) level commands
clrscrn	Clears the screen.
clrscrn	Clears the screen.
clrscrn default filename	Clears the screen. Sets default FTP remote Filename.
clrscrn default filename default local port	Clears the screen. Sets default FTP remote Filename. Uses a random port number as the local port.
clrscrn default filename default local port default port	Clears the screen. Sets default FTP remote Filename. Uses a random port number as the local port. Sets default Port number.
clrscrn default filename default local port default port default protocol	Clears the screen. Sets default FTP remote Filename. Uses a random port number as the local port. Sets default Port number. Sets default FTP Protocol.
clrscrn default filename default local port default port default protocol default username	Clears the screen. Sets default FTP remote Filename. Uses a random port number as the local port. Sets default Port number. Sets default FTP Protocol. Sets default Username.
clrscrn default filename default local port default port default protocol default username exit	Clears the screen. Sets default FTP remote Filename. Uses a random port number as the local port. Sets default Port number. Sets default FTP Protocol. Sets default Username. Exits to the next higher level.

Selects FTPS Protocol. Shows the current configuration. Displays the last 20 commands entered during the current CLI session. Sets the Username used to logon to FTP server.</number>

exit	Returns to the previous level.
reset to factory defaults cp disable	Disables reset to factory defaults button function.
reset to factory defaults cp enable	Enables reset to factory defaults button function.
show	Displays the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
wps pushbutton cp disable	Disables WPS PushButton button function.
wps pushbutton cp ena- ble	Enables WPS PushButton button function.
write	Stores the current configuration in permanent memory.
credentials (ssl-credenti	als) level commands
clrscrn	Clears the screen.
create <credential name=""></credential>	Create a new credential name
delete <credential name=""></credential>	Delete existing credential by name
edit <credential name=""></credential>	View or edit an existing credential
exit	Exits to the ssl level.
show	Show existing credential names
show history	Displays the last 20 commands entered during the current CLI session.
write	Stores the current configuration in permanent memory.
device (device) level con	nmands
auto show tlog	Continuously displays the internal trouble log.
clrscrn	Clears the screen.
cp functions	Enters the cp functions level
default long name	Restores the default product long name.
default short name	Restores the default product short name.
exit	Exit to the enable level.
long name <name></name>	Sets the product long name, displayed in command mode and the Web interface.
reboot schedule	Enters the reboot schedule level
short name <name></name>	Sets the product short name, displayed in command mode and the Web interface. <name> = maximum of eight characters.</name>
show	Show system information
show hardware infor- mation	Displays information about the hardware.
show history	Displays the last 20 commands entered during the current CLI session.
show lines	Show line information
show memory	Displays current memory usage information.
show task state	Displays current task states.
show tlog	Displays the internal trouble log.
write	Stores the current configuration in permanent memory.
dhcpserver (config-dhcp	od) level commands
clrscrn	Clears the screen.
default end ip address	Restores end IP address of DHCP address pool to the default value.
default end ipv6 address	Clears the end IPv6 address of DHCP address pool.
default lease time	Restores the lease time to default value (24 hours).

default start ip address	Restores start IP address of DHCP address pool to the default value.
default start ipv6 address	Clears the start IPv6 address of DHCP address pool.
delete all static leases	Deletes all static leases.
delete static lease <in- stance></in- 	Deletes an entry from the static lease table <instance> = index of the entry being removed</instance>
dhcp relay disable	Disables DHCP server relay mode.
dhcp relay enable	Enables DHCP server relay mode.
dhcp server ip address	Sets the IP address of DHCP server.
end ip address	Sets the end IP address of DHCP address pool.
end ipv6 address <ipv6 address/prefix></ipv6 	Sets the end IPv6 address of DHCP address pool. IPv6 addresses are written in eight groups of four hexadecimal digits separated by colons, such as 2001:0db8:85a3:0000:0000:8a2e:0370:7334 Network address ranges are written in CIDR notation. A network is denoted by the first address in the block (ending in all zeroes), a slash (/), and a decimal value equal to the size in bits of the prefix
ipv6 state disable	Disables IPv6 DHCP server.
ipv6 state enable	Enables IPv6 DHCP server.
lease time <hours></hours>	Sets the lease time. <number> = lease time in hours.</number>
no dhcp server ip address	Clears the IP address of DHCP server.
show	Displays the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
start ip address <ip address=""></ip>	Sets the start IP address of DHCP address pool.
start ipv6 address <ipv6 address/prefix></ipv6 	Sets the start IPv6 address of DHCP address pool. IPv6 addresses are written in eight groups of four hexadecimal digits separated by colons, such as 2001:0db8:85a3:0000:0000:8a2e:0370:7334 Network address ranges are written in CIDR notation. A network is denoted by the first address in the block (ending in all zeroes), a slash (/), and a decimal value equal to the size in bits of the prefix
state enable	Enables DHCP server.
static leases <number></number>	Change to dhcpd static lease level.
write	Stores the current configuration in permanent memory.
diagnostics (config-diag	nostics) level commands
clrscrn	Clears the screen.
exit	Returns to the config level.
log	Enters the next lower level.
show	Displays the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
write	Stores the current configuration in permanent memory.
disconnect (tunnel-disc	onnect:) level commands (is the number of the line)
clrscrn	Clears the screen.
exit	Returns to the tunnel level.
flush serial disable	Does not flush serial data upon closing a tunneling connection.
flush serial enable	Flushes serial data buffer when a tunneling connection is closed.
flush stop character disable	Forwards the stop character from the Line to the network.
flush stop character ena-	Prevents the stop character from the Line from being forwarded to the network.
ble	

modem control disable	Does not watch the modem control pin to disconnect.
modem control enable	Watches the modem control pin and disconnects if it is not asserted.
no stop character	Removes the stop character.
no timeout	Disables disconnect after timeout feature for tunneling sessions.
show	Displays the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
stop character <control></control>	Sets the stop character. The character may be input as text, control, decimal, or hex. A control character has the form <control>C. A decimal value character has the form \99. A hex value character has the form 0xFF.</control>
timeout <milliseconds></milliseconds>	Disconnects when no data has been received on the line (serial port) for the specified length of time. <milliseconds> = timeout in milliseconds.</milliseconds>
write	Stores the current configuration in permanent memory.
discovery (config-disco	very) level commands
clear counters	Zeros Query Port counters
clrscrn	Clears the screen.
default upnp port	Resets the UPnP Server port to its default value (0x77FF).
exit	Returns to the config level.
no clear counters	Unzeros Query Port counters
show	Displays the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
show statistics	Displays statistics and information about the discovery services.
state disable	Disables the Query Port server.
state enable	Enables the Query Port server.
upnp port <number></number>	Sets the port number the UPnP server will use. <number> = port number.</number>
upnp state disable	Disables the UPnP server.
upnp state enable	Enables the UPnP server.
write	Stores the current configuration in permanent memory.
dns (dns) level comman	ids
clrscrn	Clears the screen.
exit	Exits to the enable level.
lookup <host_or_ip></host_or_ip>	Return a lookup on the DNS name or IP address.
show	Show DNS status.
show history	Displays the last 20 commands entered during the current CLI session.
write	Stores the current configuration in permanent memory.
edit 1 (config-profile-ba	sic:default_infrastructure_profile_2) level commands
advanced	Switch to advanced level
apply wlan	Try out WLAN settings without saving them to Flash. If the settings do not work, when you reboot the device, it will still have the original settings.
clrscrn	Clears the screen.
exit	Exit to the profiles level
network name <text></text>	Sets the network name.
no network name	Clears the network name.
security	Switch to security level
show	Displays the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
state disable	Disables this profile.

write Stores the current configuration in permanent memory.	state enable	Enables this profile.

enable (enable) level co	
auto show interfaces	Show interface statistics
auto show processes	Continuously show thread runtime information
bluetooth serial	Enters the bluetooth serial level. line> = number of the line (bluetooth serial port) to be configured.
clrscrn	Clears the screen.
configure	Enters the configuration level.
connect	Show name and number for lines.
connect line	Begin session on serial port.
device	Enters the device level.
disable	Exits the enable level.
dns	Enters the DNS level.
email <number></number>	Enters the configure email level.
exit	Exit from the system
filesystem	Enters the filesystem level.
iperf <params></params>	Run iperf with command line parameters passed in quoted string.
kill ssh <session></session>	Kills SSH session with index from "show sessions"
kill telnet <session></session>	Kills Telnet session with index from "show sessions"
line	Enters the line level. line> = number of the line (serial port) to be configured.
ping <host></host>	Ping destination continuously with 5 second timeout
ping <host> <count></count></host>	Ping destination n times with 5 second timeout
ping <host> <count> <timeout></timeout></count></host>	Ping destination n times with x timeout (in seconds)
ping6 <host></host>	Ping destination continuously with 5 second timeout
ping6 <host> <count></count></host>	Ping destination n times with 5 second timeout
ping6 <host> <count> <timeout></timeout></count></host>	Ping destination n times with x timeout (in seconds)
reload	Reboot system
reload factory defaults	Reload factory defaults to permanent storage
reload to standalone firmware installer	Reboot system to standalone firmware installer
show	Show system information
show history	Displays the last 20 commands entered during the current CLI session.
show interfaces	Show interface statistics
show ip sockets	Show UDP/TCP state information
show lines	Show line information
show multicast routes	show state of VIFs and multicast routing tables
show processes	Show thread runtime information
show routes	show system routing table
show rules	show system rules
show sessions	Show active Telnet and SSH Sessions
ssh	Enters the SSH configuration level.
ssh <optclien- tUsername> <host></host></optclien- 	Begin SSH session on network <host>. The optClientUserName must match an SSH Client: Users configuration entry. Use "" in optClientUserName to prompt for host username</host>

	and password.
ssh <optclien- tUsername> <host></host></optclien- 	Begin SSH session on network <host>:<port>. The optClientUserName must match an SSH Client: Users configuration entry. Use "" in optClientUserName to prompt for host</port></host>
<port></port>	username and password.
ssl	Enters the SSL configuration level.
tcpdump <parameters></parameters>	dump traffic on a network
telnet <host></host>	Begin telnet session on network <host>.</host>
telnet <host> <port></port></host>	Begin telnet session on network <host>:<port>.</port></host>
trace route <host></host>	Trace route to destination
trace route <host> <pro- tocol></pro- </host>	Trace route to destination using TCP, ICMP, or UDP
tunnel <line></line>	Enters the tunnel level. line> = number of the tunnel line (serial port) to be configured.
usb	Enters the usb level. line> = number of the line (usb port) to be configured.
write	Stores the current configuration in permanent memory.
xml	Enters the XML level.
eth0 link state change (c	config-action:eth0 link state change) level commands
clrscrn	Clears the screen.
default delay	Resets alarm processing delay to its default value.
delay <seconds></seconds>	Sets the delay in processing the alarm. Alarm actions will not be executed if the cause is corrected within this time.
email	Enters the next lower level.
exit	Exits to the config alarm level.
ftp put	Enters the next lower level.
http post	Enters the next lower level.

filter 8 (config-ethernet-	gos-filter:eth0:8) level commands
clrscrn	Clears the screen.
default priority	Restores the default value of the priority (Excellent Effort).
exit	Exits to the next higher level.
mac address <hexadec- imal></hexadec- 	Sets the filter MAC Address. Each byte is represented by two adjacent hex digits. Bytes may run together or be separated by optional punctuation: 123ABC "12 3A BC" 12,3A,BC 12.3a.bc 12:3a:bc Note that quotes must enclose the value if it contains spaces.
network <text></text>	Sets the filter Network.
no mac address	Removes the filter MAC Address.
no network	Removes the filter Network.
no ports	Removes the filter Port.
ports <text></text>	Sets the filter Port.
priority background	Sets the priority to Background. Bandwidth allocated is 5%-100%.
priority best effort	Sets the priority to Best Effort. Bandwidth allocated is 10%-100%.
priority critical applica- tions	Sets the priority to Critical Applications. Bandwidth allocated is 15%-100%.
priority excellent effort	Sets the priority to Excellent Effort. Bandwidth allocated is 10%-100%.
priority internetwork con- trol	Sets the priority to Internetwork Control. Bandwidth allocated is 5%-100%.
priority network control	Sets the priority to Network Control. Bandwidth allocated is 5%-100%.
priority video	Sets the priority to Video. Bandwidth allocated is 20%-100%.
priority voice	Sets the priority to Voice. Bandwidth allocated is 30%-100%.
show	Shows the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
write	Stores the current configuration in permanent memory.
filter 9 (config-ethernet-	qos-filter:usb0:9) level commands
clrscrn	Clears the screen.
default priority	Restores the default value of the priority (Excellent Effort).
exit	Exits to the next higher level.
mac address <hexadec- imal></hexadec- 	Sets the filter MAC Address. Each byte is represented by two adjacent hex digits. Bytes may run together or be separated by optional punctuation: 123ABC "12 3A BC" 12,3A,BC 12.3a.bc 12:3a:bc Note that quotes must enclose the value if it contains spaces.
network <text></text>	Sets the filter Network.
no mac address	Removes the filter MAC Address.
no network	Removes the filter Network.
no ports	Removes the filter Port.
ports <text></text>	Sets the filter Port.
priority background	Sets the priority to Background. Bandwidth allocated is 5%-100%.
priority best effort	Sets the priority to Best Effort. Bandwidth allocated is 10%-100%.
-	

priority critical applica- tions	Sets the priority to Critical Applications. Bandwidth allocated is 15%-100%.
priority excellent effort	Sets the priority to Excellent Effort. Bandwidth allocated is 10%-100%.
priority internetwork control	Sets the priority to Internetwork Control. Bandwidth allocated is 5%-100%.
priority network control	Sets the priority to Network Control. Bandwidth allocated is 5%-100%.
priority video	Sets the priority to Video. Bandwidth allocated is 20%-100%.
priority voice	Sets the priority to Voice. Bandwidth allocated is 30%-100%.
show	Shows the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
write	Stores the current configuration in permanent memory.
filter 9 (config-wlan-qos-	-filter:wlan0:9) level commands
clrscrn	Clears the screen.
default priority	Restores the default value of the priority (Excellent Effort).
exit	Exits to the next higher level.
mac address <hexadec- imal></hexadec- 	Sets the filter MAC Address. Each byte is represented by two adjacent hex digits. Bytes may run together or be separated by optional punctuation: 123ABC "12 3A BC" 12,3A,BC 12.3a.bc 12:3a:bc Note that quotes must enclose the value if it contains spaces.
network <text></text>	Sets the filter Network.
no mac address	Removes the filter MAC Address.
no network	Removes the filter Network.
no ports	Removes the filter Port.
ports <text></text>	Sets the filter Port.
priority background	Sets the priority to Background. Bandwidth allocated is 5%-100%.
priority best effort	Sets the priority to Best Effort. Bandwidth allocated is 10%-100%.
priority critical applica- tions	Sets the priority to Critical Applications. Bandwidth allocated is 15%-100%.
priority excellent effort	Sets the priority to Excellent Effort. Bandwidth allocated is 10%-100%.

priority video	Sets the priority to Video. Bandwidth allocated is 20%-100%.
priority voice	Sets the priority to Voice. Bandwidth allocated is 30%-100%.
show	Shows the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
write	Stores the current configuration in permanent memory.
ftp (config-ftp) level con	nmands
clrscrn	Clears the screen.
data port <number></number>	Sets the FTP server data-port.
default data port	Restores the FTP server data-port to default: 20.
default passive mode ports	Clears the FTP server number of passive ports.
default passive mode start port	Clears the FTP server passive mode start port.
default port	Restores the FTP server port to default: 21.
exit	Returns to the config level.
passive mode ports <pre></pre>	Sets the FTP server number of passive ports.
passive mode start port <number></number>	Sets the FTP server passive mode start port.
port <number></number>	Sets the FTP server port.
show	Displays the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
show statistics	Displays the FTP statistics.
state disable	Disables the FTP server.
state enable	Enables the FTP server.
write	Stores the current configuration in permanent memory.
ftp put (config-action-ftp	p_put:wlan0 link state change) level commands
clrscrn	Clears the screen.
connection <instance></instance>	Enters the next lower level. Specify the instance for the next lower level.
default mode	Sets default of simultaneous connection mode.
exit	Exits to the next higher level.
mode sequential	Sets sequential mode; will stop after first connection that goes through.
mode simultaneous	Sets simultaneous mode; will make all possible connections.
no reminder interval	Clears the FTP Put reminder interval. FTP Put is sent once only.
reminder interval <minutes></minutes>	Sets the FTP Put reminder interval.
show	Shows the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.

write	Stores the current configuration in permanent memory.
	p_put:usb0 link state change) level commands
clrscrn	Clears the screen.
connection <instance></instance>	Enters the next lower level. Specify the instance for the next lower level. Sets default of simultaneous connection mode.
default mode	
exit	Exits to the next higher level.
mode sequential	Sets sequential mode; will stop after first connection that goes through.
mode simultaneous	Sets simultaneous mode; will make all possible connections.
no reminder interval	Clears the FTP Put reminder interval. FTP Put is sent once only.
reminder interval <minutes></minutes>	Sets the FTP Put reminder interval.
show	Shows the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
write	Stores the current configuration in permanent memory.
ftp put (config-action-ft)	p_put:on scheduled reboot) level commands
clrscrn	Clears the screen.
connection <instance></instance>	Enters the next lower level. Specify the instance for the next lower level.
default mode	Sets default of simultaneous connection mode.
exit	Exits to the next higher level.
mode sequential	Sets sequential mode; will stop after first connection that goes through.
mode simultaneous	Sets simultaneous mode; will make all possible connections.
no reminder interval	Clears the FTP Put reminder interval. FTP Put is sent once only.
reminder interval rminutes	Sets the FTP Put reminder interval.
show	Shows the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
write	Stores the current configuration in permanent memory.
ftp put (config-action-ft)	p_put:eth0 link state change) level commands
clrscrn	Clears the screen.
connection <instance></instance>	Enters the next lower level. Specify the instance for the next lower level.
default mode	Sets default of simultaneous connection mode.
exit	Exits to the next higher level.
mode sequential	Sets sequential mode; will stop after first connection that goes through.
mode simultaneous	Sets simultaneous mode; will make all possible connections.
no reminder interval	Clears the FTP Put reminder interval. FTP Put is sent once only.
reminder interval <minutes></minutes>	Sets the FTP Put reminder interval.
show	Shows the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
write	Stores the current configuration in permanent memory.
gateway (config-gatewa	
add forwarding rule <start port=""> <end port=""> <protocol> <ip></ip></protocol></end></start>	Add a forwarding rule without a name.
add forwarding rule <start port=""> <end port=""> <target port=""> <pre><pre><target port=""></target></pre></pre></target></end></start>	Add a forwarding rule based on ip address without a name.

sgateway > sinterface > sinte		Add a MAC Address filter.
		

delete virtual ip <in- stance></in- 	Delete virtual ip <instance> = index of the ip being removed.</instance>
dhcpserver	Enters the dhcpserver level.
exit	Returns to the config level.
firewall disable	Disables firewall on WAN interface.
firewall enable	Enables firewall on WAN interface.
ip address filter <num- ber></num- 	Change to config ip filter level.
ip address filter disable	Disables IP Address filtering.
ip address filter enable	Enables IP Address filtering.
mac address filter <num- ber></num- 	Change to config mac filter level.
mac address filter disable	Disables MAC Address filtering.
mac address filter enable	Enables MAC Address filtering.
no primary dns	Clears the name of the primary DNS server.
no secondary dns	Clears the name of the secondary DNS server.
operating mode disabled	Disables routing on WAN interface.
operating mode gateway	Enables routing with NAT on WAN interface.
operating mode router	Enables routing without NAT on WAN interface.
port forwarding rule <pre><number></number></pre>	Change to config gateway port forwarding level.
primary dns <ip ad-<br="">dress></ip>	Sets the IP address of the primary DNS server.
router ip address <ip address/cidr></ip 	Sets the IP address of router. Formats accepted: 192.168.1.1 (default mask) 192.168.1.1/24 (CIDR) "192.168.1.1 255.255.255.0" (explicit mask)
router ipv6 address <ipv6 address="" prefix=""></ipv6>	Sets the IPv6 address of router. IPv6 addresses are written in eight groups of four hexadecimal digits separated by colons, such as 2001:0db8:85a3:0000:0000:8a2e:0370:7334 Network address ranges are written in CIDR notation. A network is denoted by the first address in the block (ending in all zeroes), a slash (/), and a decimal value equal to the size in bits of the prefix
secondary dns <ip ad-<br="">dress></ip>	Sets the IP address of the secondary DNS server.
show	Displays the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
show routing table	Show current routing table.
show status	Show gateway configuration and status.
static route <number></number>	Change to config gateway static route level.
virtual ip <number></number>	Change to virtual ip level.
wan interface <text></text>	Sets the preferred WAN interface. <text> = interface name. NOTE: When WAN interface is wlan0, the LAN interfaces are eth0 and usb0. When WAN interface is eth0, the LAN interfaces are usb0 and Access Point. When WAN interface is usb0, the LAN interfaces are eth0 and Access Point.</text>
write	Stores the current configuration in permanent memory.
gre 1 (config-gre:1) leve	I commands
clrscrn	Clears the screen.
default local network	Restores the default local network name.
default mtu	Restores the default Maximum Transmission Unit (MTU) size.
exit	Exits to the config level.

gre <instance></instance>	Change to gre level.
ip address <text></text>	Sets the IP address and network mask.
local network <text></text>	Sets the local network name. <text> = local network name.</text>
mtu <bytes></bytes>	Sets the Maximum Transmission Unit (MTU) size.
name <text></text>	Sets the name. <text> = name.</text>
no ip address	Clears the IP address.
no name	Clears the name.
no remote host	Clear the remote host.
no remote network	Clears the remote network IP address.
remote host <text></text>	Sets the remote host. <text> = remote host.</text>
remote network <text></text>	Sets the remote network IP address and network mask.
show	Displays the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
show status	Show status
state disable	Disables GRE tunnel.
state enable	Enables GRE tunnel.
write	Stores the current configuration in permanent memory.
host 1 (tunnel-connect-l	nost::1) level commands (is the number of the line)
address <text></text>	Sets the remote host to establish tunneling connections with. <text> = IP address or host name of the remote host.</text>
aes decrypt key <hexa- decimal></hexa- 	Sets the connect tunnel AES decrypt key with up to 16 bytes. Each byte is represented by two adjacent hex digits. Bytes may run together or be separated by optional punctuation: 123ABC "12 3A BC" 12,3A,BC 12.3a.bc 12:3a:bc Note that quotes must enclose the value if it contains spaces.
aes decrypt key text <text></text>	Sets the connect tunnel AES decrypt key with up to 16 bytes. Each byte is represented by a single character. Note that quotes must enclose the value if it contains spaces.
aes encrypt key <hexa- decimal></hexa- 	Sets the connect tunnel AES encrypt key with up to 16 bytes. Each byte is represented by two adjacent hex digits. Bytes may run together or be separated by optional punctuation: 123ABC "12 3A BC" 12,3A,BC 12.3a.bc 12:3a:bc Note that quotes must enclose the value if it contains spaces.
aes encrypt key text <text></text>	Sets the connect tunnel AES encrypt key with up to 16 bytes. Each byte is represented by a single character. Note that quotes must enclose the value if it contains spaces.
auto show statistics	show connection statistics
clrscrn	Clears the screen.
credentials <text></text>	Selects the RSA/DSA certificates by name for the SSL client.
default protocol	Restores the default connect mode tunneling protocol as 'TCP'.
default secure protocols	Restores the default secure protocol selections.
default tcp keep alive	Defaults the TCP keep alive idle time.
default tcp keep alive interval	Restores the default 45 second connect mode TCP keep alive timeout.
default tcp keep alive probes	Defaults the TCP keep alive probes.
default tunnel buffer size	Defaults the maximum tunnel buffer size.
exit	Exits to the next higher level.
initial send binary ry>	Sets the host connect tunnel Initial Send text allowing for binary characters. string in binary format that will be sent out the network upon connection. Within [] use binary decimal up to 255 or hex up to 0xFF.
initial send set <text></text>	Sets the host connect tunnel Initial Send text. <text> = ascii string that will be sent out the</text>

	network upon connection.
no address	Removes the remote host address used to establish tunneling connections.
no aes decrypt key	Removes the connect tunnel AES decrypt key.
no aes encrypt key	Removes the connect tunnel AES encrypt key.
no credentials	Clears the RSA/DSA certificate selection for the SSL client.
no initial send	Removes the host connect tunnel Initial Send string.
no port	Removes the remote port used to establish tunnel connections.
no ssh username	Removes the SSH user name.
no tcp user timeout	Restores the default.
port <number></number>	Sets the remote port to use for connect mode tunneling. <number> = number of the port to use.</number>
protocol ssh	Uses SSH protocol for connect mode tunneling.
protocol ssl	Uses SSL protocol for connect mode tunneling.
protocol tcp	Uses TCP protocol for connect mode tunneling.
protocol tcp aes	Uses TCP protocol with AES encryption for connect mode tunneling.
protocol telnet	Uses Telnet protocol (with IAC) for connect mode tunneling.
protocol udp	Uses UDP protocol for connect mode tunneling.
protocol udp aes	Uses UDP protocol with AES encryption for connect mode tunneling.
secure protocols ssl3	Disables the protocol.
secure protocols ssl3	Enables the protocol.
secure protocols tls1.0 disable	Disables the protocol.
secure protocols tls1.0 enable	Enables the protocol.
secure protocols tls1.1 disable	Disables the protocol.
secure protocols tls1.1 enable	Enables the protocol.
secure protocols tls1.2 disable	Disables the protocol.
secure protocols tls1.2 enable	Enables the protocol.
show	Shows the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
show statistics	show connection statistics
ssh username <text></text>	Sets the SSH user name for use when establishing tunneling connections with other devices. <text> = SSH user name.</text>
tcp keep alive <millisec- onds></millisec- 	Sets the TCP keep alive idle time. This is the initial keep alive timeout. <milliseconds> = timer value, in milliseconds.</milliseconds>
tcp keep alive interval <milliseconds></milliseconds>	Enables TCP keep alive for connect mode tunneling and sets the timer. <milliseconds> = TCP keep alive for connect mode in milliseconds.</milliseconds>
tcp keep alive probes <pre><number></number></pre>	Sets the number of TCP keep alive probes. <number> = number of TCP keep alive probes.</number>
tcp user timeout <milli- seconds></milli- 	Sets the timeout for TCP retransmissions. <milliseconds> = timeout value, in milliseconds.</milliseconds>
tunnel buffer size < Mbytes >	Sets the maximum tunnel data to be buffered. <mbytes> = buffer size, in Mbytes.</mbytes>

tunnel buffer state disa-	Disables buffering of tunnel data.
ble	
tunnel buffer state enable	Enables buffering of tunnel data when network connection is lost or not established.
validate certificate disa- ble	Skips verification of the server certificate when connecting.
validate certificate enable	Requires verification of the server certificate when connecting.
write	Stores the current configuration in permanent memory.
host 1 (config-host:1) le	vel commands
clrscrn	Clears the screen.
default protocol	Restores the default value of the protocol (Telnet).
default remote port	Sets the remote port (used to connect to the host) to the default value, which depends on the selected protocol.
exit	Exits to the configuration level.
host <number></number>	Change to config host level
name <text></text>	Sets the name of the host. <text> = name of the host.</text>
no name	Clears the name of the host.
no remote address	Clears the remote address of the host.
no ssh username	Clears the SSH username associated with the host.
protocol ssh	Sets the protocol to SSH.
protocol telnet	Sets the protocol to Telnet.
remote address <text></text>	Sets the IP address of the remote host to connect to when this host is selected on the login connect menu. <text> = IP address.</text>
remote port <number></number>	Sets the remote port used to connect to the host. <number> = port to be used.</number>
show	Displays the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
ssh username <text></text>	Sets the username for logging into the host via SSH. <text> = username.</text>
write	Stores the current configuration in permanent memory.
host 10 (tunnel-connect	-host::10) level commands (<line> is the number of the line)</line>
address <text></text>	Sets the remote host to establish tunneling connections with. <text> = IP address or host name of the remote host.</text>
aes decrypt key <hexa- decimal></hexa- 	Sets the connect tunnel AES decrypt key with up to 16 bytes. Each byte is represented by two adjacent hex digits. Bytes may run together or be separated by optional punctuation: 123ABC "12 3A BC" 12,3A,BC 12.3a.bc 12:3a:bc Note that quotes must enclose the value if it contains spaces.
aes decrypt key text <text></text>	Sets the connect tunnel AES decrypt key with up to 16 bytes. Each byte is represented by a single character. Note that quotes must enclose the value if it contains spaces.
aes encrypt key <hexa- decimal></hexa- 	Sets the connect tunnel AES encrypt key with up to 16 bytes. Each byte is represented by two adjacent hex digits. Bytes may run together or be separated by optional punctuation: 123ABC "12 3A BC" 12,3A,BC 12.3a.bc 12:3a:bc Note that quotes must enclose the value if it contains spaces.
aes encrypt key text <text></text>	Sets the connect tunnel AES encrypt key with up to 16 bytes. Each byte is represented by a single character. Note that quotes must enclose the value if it contains spaces.
auto show statistics	show connection statistics
clrscrn	Clears the screen.
credentials <text></text>	Selects the RSA/DSA certificates by name for the SSL client.
default protocol	Restores the default connect mode tunneling protocol as 'TCP'.
default secure protocols	Restores the default secure protocol selections.
default tcp keep alive	Defaults the TCP keep alive idle time.

default tcp keep alive interval	Restores the default 45 second connect mode TCP keep alive timeout.
default tcp keep alive probes	Defaults the TCP keep alive probes.
default tunnel buffer size	Defaults the maximum tunnel buffer size.
exit	Exits to the next higher level.
initial send binary ry>	Sets the host connect tunnel Initial Send text allowing for binary characters. string in binary format that will be sent out the network upon connection. Within [] use binary decimal up to 255 or hex up to 0xFF.
initial send set <text></text>	Sets the host connect tunnel Initial Send text. <text> = ascii string that will be sent out the network upon connection.</text>
no address	Removes the remote host address used to establish tunneling connections.
no aes decrypt key	Removes the connect tunnel AES decrypt key.
no aes encrypt key	Removes the connect tunnel AES encrypt key.
no credentials	Clears the RSA/DSA certificate selection for the SSL client.
no initial send	Removes the host connect tunnel Initial Send string.
no port	Removes the remote port used to establish tunnel connections.
no ssh username	Removes the SSH user name.
no tcp user timeout	Restores the default.
port <number></number>	Sets the remote port to use for connect mode tunneling. <number> = number of the port to use.</number>
protocol ssh	Uses SSH protocol for connect mode tunneling.
protocol ssl	Uses SSL protocol for connect mode tunneling.
protocol tcp	Uses TCP protocol for connect mode tunneling.
protocol tcp aes	Uses TCP protocol with AES encryption for connect mode tunneling.
protocol telnet	Uses Telnet protocol (with IAC) for connect mode tunneling.
protocol udp	Uses UDP protocol for connect mode tunneling.
protocol udp aes	Uses UDP protocol with AES encryption for connect mode tunneling.
secure protocols ssl3 disable	Disables the protocol.
secure protocols ssl3 enable	Enables the protocol.
secure protocols tls1.0 disable	Disables the protocol.
secure protocols tls1.0 enable	Enables the protocol.
secure protocols tls1.1 disable	Disables the protocol.
secure protocols tls1.1 enable	Enables the protocol.
secure protocols tls1.2 disable	Disables the protocol.
secure protocols tls1.2 enable	Enables the protocol.
show	Shows the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
show statistics	show connection statistics
ssh username <text></text>	Sets the SSH user name for use when establishing tunneling connections with other devices. <text> = SSH user name.</text>

tcp keep alive <millisec- onds></millisec- 	Sets the TCP keep alive idle time. This is the initial keep alive timeout. <milliseconds> = timer value, in milliseconds.</milliseconds>

tcp keep alive probes <pre><number></number></pre>	Sets the number of TCP keep alive probes. <number> = number of TCP keep alive probes.</number>
tcp user timeout <milli- seconds></milli- 	Sets the timeout for TCP retransmissions. <milliseconds> = timeout value, in milliseconds.</milliseconds>
tunnel buffer size < Mbytes>	Sets the maximum tunnel data to be buffered. <mbytes> = buffer size, in Mbytes.</mbytes>
tunnel buffer state disa- ble	Disables buffering of tunnel data.
tunnel buffer state enable	Enables buffering of tunnel data when network connection is lost or not established.
validate certificate disa- ble	Skips verification of the server certificate when connecting.
validate certificate enable	Requires verification of the server certificate when connecting.
write	Stores the current configuration in permanent memory.
host 10 (config-host:10)	level commands
clrscrn	Clears the screen.
default protocol	Restores the default value of the protocol (Telnet).
default remote port	Sets the remote port (used to connect to the host) to the default value, which depends on the selected protocol.
exit	Exits to the configuration level.
host <number></number>	Change to config host level
name <text></text>	Sets the name of the host. <text> = name of the host.</text>
no name	Clears the name of the host.
no remote address	Clears the remote address of the host.
no ssh username	Clears the SSH username associated with the host.
protocol ssh	Sets the protocol to SSH.
protocol telnet	Sets the protocol to Telnet.
remote address <text></text>	Sets the IP address of the remote host to connect to when this host is selected on the login connect menu. <text> = IP address.</text>
remote port <number></number>	Sets the remote port used to connect to the host. <number> = port to be used.</number>
show	Displays the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
ssh username <text></text>	Sets the username for logging into the host via SSH. <text> = username.</text>
write	Stores the current configuration in permanent memory.
host 11 (tunnel-connect-	host::11) level commands (is the number of the line)
address <text></text>	Sets the remote host to establish tunneling connections with. <text> = IP address or host name of the remote host.</text>
aes decrypt key <hexa- decimal></hexa- 	Sets the connect tunnel AES decrypt key with up to 16 bytes. Each byte is represented by two adjacent hex digits. Bytes may run together or be separated by optional punctuation: 123ABC "12 3A BC" 12,3A,BC 12.3a.bc 12:3a:bc Note that quotes must enclose the value if it contains spaces.
aes decrypt key text <text></text>	Sets the connect tunnel AES decrypt key with up to 16 bytes. Each byte is represented by a single character. Note that quotes must enclose the value if it contains spaces.
aes encrypt key <hexa- decimal></hexa- 	Sets the connect tunnel AES encrypt key with up to 16 bytes. Each byte is represented by two adjacent hex digits. Bytes may run together or be separated by optional punctuation: 123ABC "12 3A BC" 12,3A,BC 12.3a.bc 12:3a.bc Note that quotes must enclose the value

	if it contains spaces.
aes encrypt key text <text></text>	Sets the connect tunnel AES encrypt key with up to 16 bytes. Each byte is represented by a single character. Note that quotes must enclose the value if it contains spaces.
auto show statistics	show connection statistics
clrscrn	Clears the screen.
credentials <text></text>	Selects the RSA/DSA certificates by name for the SSL client.
default protocol	Restores the default connect mode tunneling protocol as 'TCP'.
default secure protocols	Restores the default secure protocol selections.
default tcp keep alive	Defaults the TCP keep alive idle time.
default tcp keep alive interval	Restores the default 45 second connect mode TCP keep alive timeout.
default tcp keep alive probes	Defaults the TCP keep alive probes.
default tunnel buffer size	Defaults the maximum tunnel buffer size.
exit	Exits to the next higher level.
initial send binary <bina- ry></bina- 	Sets the host connect tunnel Initial Send text allowing for binary characters. string in binary format that will be sent out the network upon connection. Within [] use binary decimal up to 255 or hex up to 0xFF.
initial send set <text></text>	Sets the host connect tunnel Initial Send text. <text> = ascii string that will be sent out the network upon connection.</text>
no address	Removes the remote host address used to establish tunneling connections.
no aes decrypt key	Removes the connect tunnel AES decrypt key.
no aes encrypt key	Removes the connect tunnel AES encrypt key.
no credentials	Clears the RSA/DSA certificate selection for the SSL client.
no initial send	Removes the host connect tunnel Initial Send string.
no port	Removes the remote port used to establish tunnel connections.
no ssh username	Removes the SSH user name.
no tcp user timeout	Restores the default.
port < <i>number</i> >	Sets the remote port to use for connect mode tunneling. <number> = number of the port to use.</number>
protocol ssh	Uses SSH protocol for connect mode tunneling.
protocol ssl	Uses SSL protocol for connect mode tunneling.
protocol tcp	Uses TCP protocol for connect mode tunneling.
protocol tcp aes	Uses TCP protocol with AES encryption for connect mode tunneling.
protocol telnet	Uses Telnet protocol (with IAC) for connect mode tunneling.
protocol udp	Uses UDP protocol for connect mode tunneling.
protocol udp aes	Uses UDP protocol with AES encryption for connect mode tunneling.
secure protocols ssl3 disable	Disables the protocol.
secure protocols ssl3 enable	Enables the protocol.
secure protocols tls1.0 disable	Disables the protocol.
secure protocols tls1.0 enable	Enables the protocol.
secure protocols tls1.1 disable	Disables the protocol.

enable	
secure protocols tls1.2 disable	Disables the protocol.
secure protocols tls1.2 enable	Enables the protocol.
show	Shows the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
show statistics	show connection statistics
ssh username <text></text>	Sets the SSH user name for use when establishing tunneling connections with other devices. <text> = SSH user name.</text>
tcp keep alive <millisec- onds></millisec- 	Sets the TCP keep alive idle time. This is the initial keep alive timeout. <milliseconds> = timer value, in milliseconds.</milliseconds>
tcp keep alive interval <milliseconds></milliseconds>	Enables TCP keep alive for connect mode tunneling and sets the timer. <milliseconds> = TCP keep alive for connect mode in milliseconds.</milliseconds>
tcp keep alive probes <pre></pre>	Sets the number of TCP keep alive probes. <number> = number of TCP keep alive probes.</number>
tcp user timeout <milli- seconds></milli- 	Sets the timeout for TCP retransmissions. <milliseconds> = timeout value, in milliseconds.</milliseconds>
tunnel buffer size < Mbytes >	Sets the maximum tunnel data to be buffered. <mbytes> = buffer size, in Mbytes.</mbytes>
tunnel buffer state disa- ble	Disables buffering of tunnel data.
tunnel buffer state enable	Enables buffering of tunnel data when network connection is lost or not established.
validate certificate disa- ble	Skips verification of the server certificate when connecting.
validate certificate enable	Requires verification of the server certificate when connecting.
write	Stores the current configuration in permanent memory.

exit	Exits to the next higher level.
initial send binary binary>	Sets the host connect tunnel Initial Send text allowing for binary characters. string in binary format that will be sent out the network upon connection. Within [] use binary decimal up to 255 or hex up to 0xFF.
initial send set <text></text>	Sets the host connect tunnel Initial Send text. <text> = ascii string that will be sent out the network upon connection.</text>
no address	Removes the remote host address used to establish tunneling connections.
no aes decrypt key	Removes the connect tunnel AES decrypt key.
no aes encrypt key	Removes the connect tunnel AES encrypt key.
no credentials	Clears the RSA/DSA certificate selection for the SSL client.
no initial send	Removes the host connect tunnel Initial Send string.
no port	Removes the remote port used to establish tunnel connections.
no ssh username	Removes the SSH user name.
no tcp user timeout	Restores the default.
port <number></number>	Sets the remote port to use for connect mode tunneling. <number> = number of the port to use.</number>
protocol ssh	Uses SSH protocol for connect mode tunneling.
protocol ssl	Uses SSL protocol for connect mode tunneling.
protocol tcp	Uses TCP protocol for connect mode tunneling.
protocol tcp aes	Uses TCP protocol with AES encryption for connect mode tunneling.
protocol telnet	Uses Telnet protocol (with IAC) for connect mode tunneling.
protocol udp	Uses UDP protocol for connect mode tunneling.
protocol udp aes	Uses UDP protocol with AES encryption for connect mode tunneling.
secure protocols ssl3 disable	Disables the protocol.
secure protocols ssl3 enable	Enables the protocol.
secure protocols tls1.0 disable	Disables the protocol.
secure protocols tls1.0 enable	Enables the protocol.
secure protocols tls1.1 disable	Disables the protocol.
secure protocols tls1.1	Enables the protocol.

enable	
secure protocols tls1.2 disable	Disables the protocol.
secure protocols tls1.2 enable	Enables the protocol.
show	Shows the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
show statistics	show connection statistics
ssh username <text></text>	Sets the SSH user name for use when establishing tunneling connections with other devices. <text> = SSH user name.</text>
tcp keep alive <millisec- onds></millisec- 	Sets the TCP keep alive idle time. This is the initial keep alive timeout. <milliseconds> = timer value, in milliseconds.</milliseconds>
tcp keep alive interval rmilliseconds >	Enables TCP keep alive for connect mode tunneling and sets the timer. <milliseconds> = TCP keep alive for connect mode in milliseconds.</milliseconds>
tcp keep alive probes <pre></pre>	Sets the number of TCP keep alive probes. <number> = number of TCP keep alive probes.</number>
tcp user timeout <milli- seconds></milli- 	Sets the timeout for TCP retransmissions. <milliseconds> = timeout value, in milliseconds.</milliseconds>
tunnel buffer size < Mbytes>	Sets the maximum tunnel data to be buffered. <mbytes> = buffer size, in Mbytes.</mbytes>
tunnel buffer state disa- ble	Disables buffering of tunnel data.
tunnel buffer state enable	Enables buffering of tunnel data when network connection is lost or not established.
validate certificate disa- ble	Skips verification of the server certificate when connecting.
validate certificate enable	Requires verification of the server certificate when connecting.
write	Stores the current configuration in permanent memory.
host 16 (config-host:16)	level commands
host 16 (config-host:16) clrscrn	level commands Clears the screen.
clrscrn	Clears the screen.
clrscrn default protocol	Clears the screen. Restores the default value of the protocol (Telnet). Sets the remote port (used to connect to the host) to the default value, which depends on
clrscrn default protocol default remote port	Clears the screen. Restores the default value of the protocol (Telnet). Sets the remote port (used to connect to the host) to the default value, which depends on the selected protocol.
clrscrn default protocol default remote port exit	Clears the screen. Restores the default value of the protocol (Telnet). Sets the remote port (used to connect to the host) to the default value, which depends on the selected protocol. Exits to the configuration level.
clrscrn default protocol default remote port exit host <number></number>	Clears the screen. Restores the default value of the protocol (Telnet). Sets the remote port (used to connect to the host) to the default value, which depends on the selected protocol. Exits to the configuration level. Change to config host level

address <text></text>	Sets the remote host to establish tunneling connections with. <text> = IP address or host name of the remote host.</text>
aes decrypt key <hexa- decimal></hexa- 	Sets the connect tunnel AES decrypt key with up to 16 bytes. Each byte is represented by two adjacent hex digits. Bytes may run together or be separated by optional punctuation: 123ABC "12 3A BC" 12,3A,BC 12.3a.bc 12:3a:bc Note that quotes must enclose the value if it contains spaces.
aes decrypt key text <text></text>	Sets the connect tunnel AES decrypt key with up to 16 bytes. Each byte is represented by a single character. Note that quotes must enclose the value if it contains spaces.
aes encrypt key <hexa- decimal></hexa- 	Sets the connect tunnel AES encrypt key with up to 16 bytes. Each byte is represented by two adjacent hex digits. Bytes may run together or be separated by optional punctuation: 123ABC "12 3A BC" 12,3A,BC 12.3a.bc 12:3a:bc Note that quotes must enclose the value if it contains spaces.
aes encrypt key text <text></text>	Sets the connect tunnel AES encrypt key with up to 16 bytes. Each byte is represented by a single character. Note that quotes must enclose the value if it contains spaces.
auto show statistics	show connection statistics
clrscrn	Clears the screen.
credentials <text></text>	Selects the RSA/DSA certificates by name for the SSL client.
default protocol	Restores the default connect mode tunneling protocol as 'TCP'.
default secure protocols	Restores the default secure protocol selections.
default tcp keep alive	Defaults the TCP keep alive idle time.
default tcp keep alive interval	Restores the default 45 second connect mode TCP keep alive timeout.
default tcp keep alive probes	Defaults the TCP keep alive probes.
default tunnel buffer size	Defaults the maximum tunnel buffer size.
exit	Exits to the next higher level.
initial send binary binary>	Sets the host connect tunnel Initial Send text allowing for binary characters. string in binary format that will be sent out the network upon connection. Within [] use binary decimal up to 255 or hex up to 0xFF.
initial send set <text></text>	Sets the host connect tunnel Initial Send text. <text> = ascii string that will be sent out the network upon connection.</text>
no address	Removes the remote host address used to establish tunneling connections.
no address no aes decrypt key	Removes the remote host address used to establish tunneling connections. Removes the connect tunnel AES decrypt key.
	

no initial send	Removes the host connect tunnel Initial Send string.
no port	Removes the remote port used to establish tunnel connections.
no ssh username	Removes the SSH user name.
no tcp user timeout	Restores the default.
port <number></number>	Sets the remote port to use for connect mode tunneling. <number> = number of the port to use.</number>
protocol ssh	Uses SSH protocol for connect mode tunneling.
protocol ssl	Uses SSL protocol for connect mode tunneling.
protocol tcp	Uses TCP protocol for connect mode tunneling.
protocol tcp aes	Uses TCP protocol with AES encryption for connect mode tunneling.
protocol telnet	Uses Telnet protocol (with IAC) for connect mode tunneling.
protocol udp	Uses UDP protocol for connect mode tunneling.
protocol udp aes	Uses UDP protocol with AES encryption for connect mode tunneling.
secure protocols ssl3 disable	Disables the protocol.
secure protocols ssl3 enable	Enables the protocol.
secure protocols tls1.0 disable	Disables the protocol.
secure protocols tls1.0 enable	Enables the protocol.
secure protocols tls1.1 disable	Disables the protocol.
secure protocols tls1.1 enable	Enables the protocol.

default protocol	Restores the default value of the protocol (Telnet).
default remote port	Sets the remote port (used to connect to the host) to the default value, which depends on
	the selected protocol.
exit	Exits to the configuration level.
host < <i>number</i> >	Change to config host level
name <text></text>	Sets the name of the host. <text> = name of the host.</text>
no name	Clears the name of the host.
no remote address	Clears the remote address of the host.
no ssh username	Clears the SSH username associated with the host.
protocol ssh	Sets the protocol to SSH.
protocol telnet	Sets the protocol to Telnet.
remote address <text></text>	Sets the IP address of the remote host to connect to when this host is selected on the login connect menu. <text> = IP address.</text>
remote port <number></number>	Sets the remote port used to connect to the host. <number> = port to be used.</number>
show	Displays the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
ssh username <text></text>	Sets the username for logging into the host via SSH. <text> = username.</text>
write	Stores the current configuration in permanent memory.
host 29 (config-host:29)	level commands
clrscrn	Clears the screen.
default protocol	Restores the default value of the protocol (Telnet).
default remote port	Sets the remote port (used to connect to the host) to the default value, which depends on the selected protocol.
exit	Exits to the configuration level.
host <number></number>	Change to config host level
name <text></text>	Sets the name of the host. <text> = name of the host.</text>
no name	Clears the name of the host.
no remote address	Clears the remote address of the host.
no ssh username	Clears the SSH username associated with the host.
protocol ssh	Sets the protocol to SSH.
protocol telnet	Sets the protocol to Telnet.
remote address <text></text>	Sets the IP address of the remote host to connect to when this host is selected on the login connect menu. <text> = IP address.</text>
remote port <number></number>	Sets the remote port used to connect to the host. <number> = port to be used.</number>
show	Displays the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
ssh username <text></text>	Sets the username for logging into the host via SSH. <text> = username.</text>
write	Stores the current configuration in permanent memory.
host 3 (tunnel-connect-h	nost: level commands (<line> is the number of the line)</line>
address <text></text>	Sets the remote host to establish tunneling connections with. <text> = IP address or host name of the remote host.</text>
aes decrypt key <hexa- decimal></hexa- 	Sets the connect tunnel AES decrypt key with up to 16 bytes. Each byte is represented by two adjacent hex digits. Bytes may run together or be separated by optional punctuation: 123ABC "12 3A BC" 12,3A,BC 12.3a.bc 12:3a:bc Note that quotes must enclose the value if it contains spaces.
aes decrypt key text <text></text>	Sets the connect tunnel AES decrypt key with up to 16 bytes. Each byte is represented by a single character. Note that quotes must enclose the value if it contains spaces.

aes encrypt key <hexa- decimal></hexa- 	Sets the connect tunnel AES encrypt key with up to 16 bytes. Each byte is represented by two adjacent hex digits. Bytes may run together or be separated by optional punctuation: 123ABC "12 3A BC" 12,3A,BC 12.3a.bc 12:3a:bc Note that quotes must enclose the value if it contains spaces.
aes encrypt key text <text></text>	Sets the connect tunnel AES encrypt key with up to 16 bytes. Each byte is represented by a single character. Note that quotes must enclose the value if it contains spaces.
auto show statistics	show connection statistics
clrscrn	Clears the screen.
credentials <text></text>	Selects the RSA/DSA certificates by name for the SSL client.
default protocol	Restores the default connect mode tunneling protocol as 'TCP'.
default secure protocols	Restores the default secure protocol selections.
default tcp keep alive	Defaults the TCP keep alive idle time.
default tcp keep alive interval	Restores the default 45 second connect mode TCP keep alive timeout.
default tcp keep alive probes	Defaults the TCP keep alive probes.
default tunnel buffer size	Defaults the maximum tunnel buffer size.
exit	Exits to the next higher level.
initial send binary ry>	Sets the host connect tunnel Initial Send text allowing for binary characters. string in binary format that will be sent out the network upon connection. Within [] use binary decimal up to 255 or hex up to 0xFF.
initial send set <text></text>	Sets the host connect tunnel Initial Send text. <text> = ascii string that will be sent out the network upon connection.</text>
no address	Removes the remote host address used to establish tunneling connections.
no aes decrypt key	Removes the connect tunnel AES decrypt key.
no aes encrypt key	Removes the connect tunnel AES encrypt key.
no credentials	Clears the RSA/DSA certificate selection for the SSL client.
no initial send	Removes the host connect tunnel Initial Send string.
no port	Removes the remote port used to establish tunnel connections.
no ssh username	Removes the SSH user name.
no tcp user timeout	Restores the default.
port <number></number>	Sets the remote port to use for connect mode tunneling. <number> = number of the port to use.</number>
protocol ssh	Uses SSH protocol for connect mode tunneling.
protocol ssl	Uses SSL protocol for connect mode tunneling.
protocol tcp	Uses TCP protocol for connect mode tunneling.
protocol tcp aes	Uses TCP protocol with AES encryption for connect mode tunneling.
protocol telnet	Uses Telnet protocol (with IAC) for connect mode tunneling.
protocol udp	Uses UDP protocol for connect mode tunneling.
protocol udp aes	Uses UDP protocol with AES encryption for connect mode tunneling.
secure protocols ssl3 disable	Disables the protocol.
secure protocols ssl3 enable	Enables the protocol.
secure protocols tls1.0 disable	Disables the protocol.
secure protocols tls1.0 enable	Enables the protocol.

secure protocols tls1.1 disable	Disables the protocol.
secure protocols tls1.1 enable	Enables the protocol.
secure protocols tls1.2 disable	Disables the protocol.
secure protocols tls1.2 enable	Enables the protocol.
show	Shows the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
show statistics	show connection statistics
ssh username <text></text>	Sets the SSH user name for use when establishing tunneling connections with other devices. <text> = SSH user name.</text>
tcp keep alive <millisec- onds></millisec- 	Sets the TCP keep alive idle time. This is the initial keep alive timeout. <milliseconds> = timer value, in milliseconds.</milliseconds>
tcp keep alive interval <milliseconds></milliseconds>	Enables TCP keep alive for connect mode tunneling and sets the timer. <milliseconds> = TCP keep alive for connect mode in milliseconds.</milliseconds>
tcp keep alive probes <pre><number></number></pre>	Sets the number of TCP keep alive probes. <number> = number of TCP keep alive probes.</number>
tcp user timeout <milli- seconds></milli- 	Sets the timeout for TCP retransmissions. <milliseconds> = timeout value, in milliseconds.</milliseconds>
tunnel buffer size < Mbytes >	Sets the maximum tunnel data to be buffered. <mbytes> = buffer size, in Mbytes.</mbytes>
tunnel buffer state disa- ble	Disables buffering of tunnel data.
tunnel buffer state enable	Enables buffering of tunnel data when network connection is lost or not established.
validate certificate disa- ble	Skips verification of the server certificate when connecting.
validate certificate enable	Requires verification of the server certificate when connecting.
write	Stores the current configuration in permanent memory.
host 3 (config-host:3) le	vel commands
clrscrn	Clears the screen.
default protocol	Restores the default value of the protocol (Telnet).
default remote port	Sets the remote port (used to connect to the host) to the default value, which depends on the selected protocol.
exit	Exits to the configuration level.
host <number></number>	Change to config host level
name <text></text>	Sets the name of the host. <text> = name of the host.</text>
no name	Clears the name of the host.
no remote address	Clears the remote address of the host.
no ssh username	Clears the SSH username associated with the host.
protocol ssh	Sets the protocol to SSH.
protocol telnet	Sets the protocol to Telnet.
remote address <text></text>	Sets the IP address of the remote host to connect to when this host is selected on the login connect menu. <text> = IP address.</text>
remote port <number></number>	Sets the remote port used to connect to the host. <number> = port to be used.</number>
show	Displays the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.

ssh username <text></text>	Sets the username for logging into the host via SSH. <text> = username.</text>
write	Stores the current configuration in permanent memory.
host 30 (config-host:30) level commands
clrscrn	Clears the screen.

<text></text>	a single character. Note that quotes must enclose the value if it contains spaces.
auto show statistics	show connection statistics
clrscrn	Clears the screen.
credentials <text></text>	Selects the RSA/DSA certificates by name for the SSL client.
default protocol	Restores the default connect mode tunneling protocol as 'TCP'.
default secure protocols	Restores the default secure protocol selections.
default tcp keep alive	Defaults the TCP keep alive idle time.
default tcp keep alive interval	Restores the default 45 second connect mode TCP keep alive timeout.
default tcp keep alive probes	Defaults the TCP keep alive probes.
default tunnel buffer size	Defaults the maximum tunnel buffer size.
exit	Exits to the next higher level.
initial send binary binary>	Sets the host connect tunnel Initial Send text allowing for binary characters. string in binary format that will be sent out the network upon connection. Within [] use binary decimal up to 255 or hex up to 0xFF.
initial send set <text></text>	Sets the host connect tunnel Initial Send text. <text> = ascii string that will be sent out the network upon connection.</text>
no address	Removes the remote host address used to establish tunneling connections.
no aes decrypt key	Removes the connect tunnel AES decrypt key.
no aes encrypt key	Removes the connect tunnel AES encrypt key.
no credentials	Clears the RSA/DSA certificate selection for the SSL client.
no initial send	Removes the host connect tunnel Initial Send string.
no port	Removes the remote port used to establish tunnel connections.
no ssh username	Removes the SSH user name.
no tcp user timeout	Restores the default.
port <number></number>	Sets the remote port to use for connect mode tunneling. <number> = number of the port to use.</number>
protocol ssh	Uses SSH protocol for connect mode tunneling.
protocol ssl	Uses SSL protocol for connect mode tunneling.
protocol tcp	Uses TCP protocol for connect mode tunneling.
protocol tcp aes	Uses TCP protocol with AES encryption for connect mode tunneling.
protocol telnet	Uses Telnet protocol (with IAC) for connect mode tunneling.
protocol udp	Uses UDP protocol for connect mode tunneling.
protocol udp aes	Uses UDP protocol with AES encryption for connect mode tunneling.
secure protocols ssl3 disable	Disables the protocol.
secure protocols ssl3 enable	Enables the protocol.
secure protocols tls1.0 disable	Disables the protocol.
secure protocols tls1.0 enable	Enables the protocol.
secure protocols tls1.1 disable	Disables the protocol.
secure protocols tls1.1 enable	Enables the protocol.
secure protocols tls1.2	Disables the protocol.

l	
disable	
secure protocols tls1.2 enable	Enables the protocol.
show	Shows the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
show statistics	show connection statistics
ssh username <text></text>	Sets the SSH user name for use when establishing tunneling connections with other devices. <text> = SSH user name.</text>
tcp keep alive <millisec- onds></millisec- 	Sets the TCP keep alive idle time. This is the initial keep alive timeout. <milliseconds> = timer value, in milliseconds.</milliseconds>
tcp keep alive interval rmilliseconds >	Enables TCP keep alive for connect mode tunneling and sets the timer. <milliseconds> = TCP keep alive for connect mode in milliseconds.</milliseconds>
tcp keep alive probes <pre><number></number></pre>	Sets the number of TCP keep alive probes. <number> = number of TCP keep alive probes.</number>
tcp user timeout <milli- seconds></milli- 	Sets the timeout for TCP retransmissions. <milliseconds> = timeout value, in milliseconds.</milliseconds>
tunnel buffer size <mbytes></mbytes>	Sets the maximum tunnel data to be buffered. <mbytes> = buffer size, in Mbytes.</mbytes>
tunnel buffer state disa- ble	Disables buffering of tunnel data.
tunnel buffer state enable	Enables buffering of tunnel data when network connection is lost or not established.
validate certificate disa- ble	Skips verification of the server certificate when connecting.
validate certificate enable	Requires verification of the server certificate when connecting.
write	Stores the current configuration in permanent memory.

aes decrypt key <hexa- decimal></hexa- 	Sets the connect tunnel AES decrypt key with up to 16 bytes. Each byte is represented by two adjacent hex digits. Bytes may run together or be separated by optional punctuation: 123ABC "12 3A BC" 12,3A,BC 12.3a.bc 12:3a:bc Note that quotes must enclose the value if it contains spaces.
aes decrypt key text <text></text>	Sets the connect tunnel AES decrypt key with up to 16 bytes. Each byte is represented by a single character. Note that quotes must enclose the value if it contains spaces.
aes encrypt key <hexa- decimal></hexa- 	Sets the connect tunnel AES encrypt key with up to 16 bytes. Each byte is represented by two adjacent hex digits. Bytes may run together or be separated by optional punctuation: 123ABC "12 3A BC" 12,3A,BC 12.3a.bc 12:3a:bc Note that quotes must enclose the value if it contains spaces.
aes encrypt key text <text></text>	Sets the connect tunnel AES encrypt key with up to 16 bytes. Each byte is represented by a single character. Note that quotes must enclose the value if it contains spaces.
auto show statistics	show connection statistics
clrscrn	Clears the screen.
credentials <text></text>	Selects the RSA/DSA certificates by name for the SSL client.
default protocol	Restores the default connect mode tunneling protocol as 'TCP'.
default secure protocols	Restores the default secure protocol selections.
default tcp keep alive	Defaults the TCP keep alive idle time.
default tcp keep alive interval	Restores the default 45 second connect mode TCP keep alive timeout.
default tcp keep alive probes	Defaults the TCP keep alive probes.
default tunnel buffer size	Defaults the maximum tunnel buffer size.
exit	Exits to the next higher level.
initial send binary ry>	Sets the host connect tunnel Initial Send text allowing for binary characters. string in binary format that will be sent out the network upon connection. Within [] use binary decimal up to 255 or hex up to 0xFF.
initial send set <text></text>	Sets the host connect tunnel Initial Send text. <text> = ascii string that will be sent out the network upon connection.</text>
no address	Removes the remote host address used to establish tunneling connections.
no aes decrypt key	Removes the connect tunnel AES decrypt key.
no aes encrypt key	Removes the connect tunnel AES encrypt key.
no credentials	Clears the RSA/DSA certificate selection for the SSL client.
no initial send	Removes the host connect tunnel Initial Send string.
no port	Removes the remote port used to establish tunnel connections.
no ssh username	Removes the SSH user name.
no tcp user timeout	Restores the default.
port <number></number>	Sets the remote port to use for connect mode tunneling. <number> = number of the port to use.</number>
protocol ssh	Uses SSH protocol for connect mode tunneling.
protocol ssl	Uses SSL protocol for connect mode tunneling.
protocol tcp	Uses TCP protocol for connect mode tunneling.
protocol tcp aes	Uses TCP protocol with AES encryption for connect mode tunneling.
protocol telnet	Uses Telnet protocol (with IAC) for connect mode tunneling.
protocol udp	Uses UDP protocol for connect mode tunneling.
protocol udp aes	Uses UDP protocol with AES encryption for connect mode tunneling.
secure protocols ssl3 disable	Disables the protocol.
secure protocols ssl3	Enables the protocol.
	ı .

enable	
secure protocols tls1.0 disable	Disables the protocol.
secure protocols tls1.0 enable	Enables the protocol.
secure protocols tls1.1 disable	Disables the protocol.
secure protocols tls1.1 enable	Enables the protocol.
secure protocols tls1.2 disable	Disables the protocol.
secure protocols tls1.2 enable	Enables the protocol.
show	Shows the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
show statistics	show connection statistics
ssh username <text></text>	Sets the SSH user name for use when establishing tunneling connections with other devices. <text> = SSH user name.</text>
tcp keep alive <millisec- onds></millisec- 	Sets the TCP keep alive idle time. This is the initial keep alive timeout. <milliseconds> = timer value, in milliseconds.</milliseconds>
tcp keep alive interval rmilliseconds >	Enables TCP keep alive for connect mode tunneling and sets the timer. <milliseconds> = TCP keep alive for connect mode in milliseconds.</milliseconds>
tcp keep alive probes <pre></pre>	Sets the number of TCP keep alive probes. <number> = number of TCP keep alive probes.</number>
tcp user timeout <milli- seconds></milli- 	Sets the timeout for TCP retransmissions. <milliseconds> = timeout value, in milliseconds.</milliseconds>
tunnel buffer size < Mbytes>	Sets the maximum tunnel data to be buffered. <mbytes> = buffer size, in Mbytes.</mbytes>
tunnel buffer state disa- ble	Disables buffering of tunnel data.
tunnel buffer state enable	Enables buffering of tunnel data when network connection is lost or not established.
validate certificate disa- ble	Skips verification of the server certificate when connecting.
validate certificate enable	Requires verification of the server certificate when connecting.
write	Stores the current configuration in permanent memory.
host 7 (config-host:7) le	vel commands
clrscrn	Clears the screen.
default protocol	Restores the default value of the protocol (Telnet).
default remote port	Sets the remote port (used to connect to the host) to the default value, which depends on the selected protocol.
exit	Exits to the configuration level.
host <number></number>	Change to config host level
name <text></text>	Sets the name of the host. <text> = name of the host.</text>
no name	Clears the name of the host.
no remote address	Clears the remote address of the host.
no ssh username	Clears the SSH username associated with the host.
protocol ssh	Sets the protocol to SSH.
protocol telnet	Sets the protocol to Telnet.
remote address <text></text>	Sets the IP address of the remote host to connect to when this host is selected on the login

	connect menu. <text> = IP address.</text>
remote port <number></number>	Sets the remote port used to connect to the host. <number> = port to be used.</number>
show	Displays the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
ssh username <text></text>	Sets the username for logging into the host via SSH. <text> = username.</text>
write	Stores the current configuration in permanent memory.
	nost:< <i>line></i> :8) level commands (< <i>line></i> is the number of the line)
address <text></text>	Sets the remote host to establish tunneling connections with. <text> = IP address or host name of the remote host.</text>
aes decrypt key <hexa- decimal></hexa- 	Sets the connect tunnel AES decrypt key with up to 16 bytes. Each byte is represented by two adjacent hex digits. Bytes may run together or be separated by optional punctuation: 123ABC "12 3A BC" 12,3A,BC 12.3a.bc 12:3a:bc Note that quotes must enclose the value if it contains spaces.
aes decrypt key text <text></text>	Sets the connect tunnel AES decrypt key with up to 16 bytes. Each byte is represented by a single character. Note that quotes must enclose the value if it contains spaces.

Resets the authentication timeout to its default value. Restores the HTTP Server log format string to its default value. Resets the maximum bytes to its default value. Restores the default maximum number of HTTP Server log entries. Resets the timeout to its default value. Resets the HTTP Server port to its default value. Resets the HTTP Server SSL port to its default value.
clrscrn default authentication timeout default log format default max bytes default max log entries default max timeout default port default secure protocols	Clears the screen. Resets the authentication timeout to its default value. Restores the HTTP Server log format string to its default value. Resets the maximum bytes to its default value. Restores the default maximum number of HTTP Server log entries. Resets the timeout to its default value. Resets the HTTP Server port to its default value. Resets the HTTP Server SSL port to its default value. Restores the default secure protocol selections.
clrscrn default authentication timeout default log format default max bytes default max log entries default max timeout default port default secure port default secure protocols delete auth <uri></uri>	Clears the screen. Resets the authentication timeout to its default value. Restores the HTTP Server log format string to its default value. Resets the maximum bytes to its default value. Restores the default maximum number of HTTP Server log entries. Resets the timeout to its default value. Resets the HTTP Server port to its default value. Resets the HTTP Server SSL port to its default value. Restores the default secure protocol selections. Deletes an existing HTTP Server authentication directive. <uri> = URI of the server.</uri>

https state enable	Enables the HTTPS server.
log format <text></text>	Sets the log format string for the HTTP server, using the following directives: %a remote ip address (could be a proxy) %b bytes sent excluding headers %B bytes sent excluding headers (0 = '-') %h remote host (same as %a) %{h}i header contents from request (h = header string) %m request method %p ephemeral local port value used for request %q query string (prepend with '?' or empty '-') %t timestamp HH:MM:SS (same as Apache '%(%H:%M:%S)t') %u remote user (could be bogus for 401 status) %U URL path info %r first line of request (same as '%m %U%q <version>') %s return status</version>
logging state disable	Disables HTTP server logging.
logging state enable	Enables HTTP server logging.
max bytes <number></number>	Sets the maximum number of bytes the HTTP server accepts when receiving a request.
max log entries <num- ber></num- 	Sets the maximum number of HTTP server log entries. <number> = maximum number of HTTP server log entries.</number>
max timeout <seconds></seconds>	Sets the maximum time the HTTP server waits when receiving a request. <seconds> = maximum timeout value.</seconds>
no clear counters	Restores the HTTP counters to the aggregate values.
no port	Disables the HTTP Server port.
no secure credentials	Clears the RSA/DSA certificate selection for the HTTP server.
no secure port	Disables the HTTP Server SSL port.
port <number></number>	Sets the port number the HTTP server will use. <number> = port number.</number>
secure credentials <text></text>	Selects the RSA/DSA certificates by name for the HTTP server.
secure port <number></number>	Sets the port number the HTTP server will use over SSL. <number> = port number.</number>
secure protocols ssl3 disable	Disables the protocol.
secure protocols ssl3 enable	Enables the protocol.
secure protocols tls1.0 disable	Disables the protocol.
secure protocols tls1.0 enable	Enables the protocol.
secure protocols tls1.1 disable	Disables the protocol.
secure protocols tls1.1 enable	Enables the protocol.
secure protocols tls1.2 disable	Disables the protocol.
secure protocols tls1.2 enable	Enables the protocol.
show	Displays the current configuration.
show auth	Displays the HTTP server authentication settings.
show history	Displays the last 20 commands entered during the current CLI session.
show log	Displays the HTTP server log.
show statistics	Displays the HTTP statistics.
state disable	Disables the HTTP server.
state enable	Enables the HTTP server.
write	Stores the current configuration in permanent memory.
http post (config-action-	http_post:wlan0 link state change) level commands
clrscrn	Clears the screen.
connection <instance></instance>	Enters the next lower level. Specify the instance for the next lower level.

default mode	Sets default of simultaneous connection mode.
exit	Exits to the next higher level.
mode sequential	Sets sequential mode; will stop after first connection that goes through.
mode simultaneous	Sets simultaneous mode; will make all possible connections.
no reminder interval	Clears the HTTP Post reminder interval. HTTP Post is sent once only.
reminder interval <minutes></minutes>	Sets the HTTP Post reminder interval.
show	Shows the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
write	Stores the current configuration in permanent memory.
http post (config-action-	http_post:usb0 link state change) level commands
clrscrn	Clears the screen.
connection <instance></instance>	Enters the next lower level. Specify the instance for the next lower level.
default mode	Sets default of simultaneous connection mode.

show	Shows the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
write	Stores the current configuration in permanent memory.
icmp (config-icmp) leve	
clrscrn	Clears the screen.
exit	Exits to the configuration level.
show	Displays the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
state disable	Prevents ICMP packets from being sent or received.
state enable	Allows ICMP packets to be sent and received.
write	Stores the current configuration in permanent memory.
if 1 (config-if:eth0) level	commands
clrscrn	Clears the screen.
default gateway <ip ad-<br="">dress></ip>	Sets the configurable gateway IP address to the default value.
default mtu	Restores the default Maximum Transmission Unit (MTU) size.
default priority	Restores the default priority for the interface.
dhcp client id <text></text>	Sets the DHCP client ID.
dhcp disable	Disables DHCP.
dhcp enable	Enables DHCP.
dhcp renew	Force DHCP to renew
domain <text></text>	Sets the domain name. <text> = name of the domain.</text>
exit	Exits to the config level.
failover	Enter failover configuration level
hostname <text></text>	Sets the host name. <text> = name of the host.</text>
if <instance></instance>	Changes to the interface configuration level.
ip address <ip ad-<br="">dress/cidr></ip>	Sets the IP address and network mask. Formats accepted: 192.168.1.1 (default mask) 192.168.1.1/24 (CIDR) "192.168.1.1 255.255.25.0" (explicit mask)
ipv4 state disable	Disables IPv4 for the interface.
ipv4 state enable	Enables IPv4 for the interface.
ipv6 address <ipv6 address="" prefix=""></ipv6>	Sets the IPv6 static address. IPv6 addresses are written in eight groups of four hexadecimal digits separated by colons, such as 2001:0db8:85a3:0000:0000:8a2e:0370:7334 Network address ranges are written in CIDR notation. A network is denoted by the first address in the block (ending in all zeroes), a slash (/), and a decimal value equal to the size in bits of the prefix
ipv6 auto configure enable	Enables IPv6 stateless address autoconfiguration.
ipv6 default gateway <ipv6 address=""></ipv6>	Sets the IPv6 default gateway. IPv6 addresses are written in eight groups of four hexadecimal digits separated by colons, such as 2001:0db8:85a3:0000:0000:8a2e:0370:7334 Network address ranges are written in CIDR notation. A network is denoted by the first address in the block (ending in all zeroes), a slash (/), and a decimal value equal to the size in bits of the prefix
ipv6 dhcp enable	Enables IPv6 DHCP.
ipv6 domain <text></text>	Sets the IPv6 domain name. <text> = name of the domain.</text>
ipv6 primary dns <ipv6 address></ipv6 	Sets the IPv6 address of the primary DNS server. IPv6 addresses are written in eight groups of four hexadecimal digits separated by colons, such as 2001:0db8:85a3:0000:0000:8a2e:0370:7334 Network address ranges are written in CIDR notation. A network is denoted by the first address in the block (ending in all zeroes), a slash (/), and a decimal value equal to the size in bits of the prefix

ipv4 state disable Disables IPv4 for the interface.	ipv4 state disable	Disables IPv4 for the interface.
ipv4 state enable Enables IPv4 for the interface.	ipv4 state enable	Enables IPv4 for the interface.

ipv6 address <ipv6 address="" prefix=""></ipv6>	Sets the IPv6 static address. IPv6 addresses are written in eight groups of four hexadecimal digits separated by colons, such as 2001:0db8:85a3:0000:0000:8a2e:0370:7334 Network address ranges are written in CIDR notation. A network is denoted by the first address in the block (ending in all zeroes), a slash (/), and a decimal value equal to the size in bits of the prefix
ipv6 auto configure ena- ble	Enables IPv6 stateless address autoconfiguration.
ipv6 default gateway <ipv6 address=""></ipv6>	Sets the IPv6 default gateway. IPv6 addresses are written in eight groups of four hexadecimal digits separated by colons, such as 2001:0db8:85a3:0000:0000:8a2e:0370:7334 Network address ranges are written in CIDR notation. A network is denoted by the first address in the block (ending in all zeroes), a slash (/), and a decimal value equal to the size in bits of the prefix
ipv6 dhcp enable	Enables IPv6 DHCP.
ipv6 domain <text></text>	Sets the IPv6 domain name. <text> = name of the domain.</text>
ipv6 primary dns <ipv6 address></ipv6 	Sets the IPv6 address of the primary DNS server. IPv6 addresses are written in eight groups of four hexadecimal digits separated by colons, such as 2001:0db8:85a3:0000:0000:8a2e:0370:7334 Network address ranges are written in CIDR notation. A network is denoted by the first address in the block (ending in all zeroes), a slash (/), and a decimal value equal to the size in bits of the prefix
ipv6 state enable	Enables IPv6 for the interface.
link	Enter link configuration level
mtu <bytes></bytes>	Sets the Maximum Transmission Unit (MTU) size.
no default gateway	Clears the default gateway.

line 1 (line:1) level comn	nands
auto show statistics	Continuously displays line statistics.
baud rate <bits per="" sec-<br="">ond></bits>	Sets the line speed. bits per second> = the speed. Standard speeds include 1200, 2400, 4800, 9600, 19200, and so on.
bluetooth serial	Enters the bluetooth serial level. line> = number of the line (bluetooth serial port) to be configured.

Sets the serial counters to zero.
Clears the screen.
Sets the current line to always be in command mode.
Disables user-defined serial boot string to be echoed in the CLI.
Enables user-defined serial boot string to be echoed in the CLI.
Enables user to enter a custom string at boot time to enter command mode.
Sets a string that can be entered at boot time to enter command mode. <string> = text with possible binary characters. Within [] use binary decimal up to 255 or hex up to 0xFF. Within {} specify decimal milliseconds time delay.</string>
Sets a sign-on message that is sent from the serial port when the device boots and when the line is in command mode. <string> = text with possible binary characters. Within [] use binary decimal up to 255 or hex up to 0xFF.</string>
Sets boot-up wait time for command mode serial string. <milliseconds> = wait time.</milliseconds>
Configures line with the current value of settings.
Uses seven bits for data on the line.
Uses eight bits for data on the line.
Restores the default speed of 9600 bits per second.
Restores the default of eight data bits.
Restores the default of no flow control.
Restores the default termination on this line.
Restores the default of no parity.
Restores the default of one stop bit.
Restores the factory default threshold.
Restores the default xoff character on this line.
Restores the default xon character on this line.
Exits to the enable level
Uses hardware (RTS/CTS) flow control on the line.
Does not provide flow control on the line.
Uses software (xon/xoff characters) flow control on the line.
Disables line termination.
Sets line termination on Rx only.
Sets line termination on Tx only.
Sets line termination on Tx and Rx.
Sets the gap timer in milliseconds. If some data has been received, it will be forwarded after this time since the last character.
Sets the line interface to RS232.
Sets the line interface to RS485 in ful-duplex mode.
Sets the line interface to RS485 in half-duplex mode.

kill session	Kills command mode session on the Line
line line >	Enters the line level. line> = number of the line (serial port) to be configured.
name <text></text>	Sets the name for this line.
no clear line counters	Restores the serial counters to the aggregate values.
no command mode	Disables command mode for the current line.
no command mode signon message	Clears the signon message displayed at boot time and when entering command mode.
no gap timer	Removes the gap timer, so forwarding depends on the line speed.
no name	Removes the name of this line.
parity even	Uses a parity bit on the line for even parity.
parity none	Does not use a parity bit on the line.
parity odd	Uses a parity bit on the line for odd parity.
protocol modbus ascii	Applies Modbus ASCII protocol on the line.
protocol modbus rtu	Applies Modbus RTU protocol on the line.
protocol none	Uses no protocol on the line.
protocol tunnel	Applies tunnel protocol on the line.
reassert	Asserts line status with current configured values.
show	Displays the current status.
show command mode	Shows the command mode settings for the current line.
show history	Displays the last 20 commands entered during the current CLI session.
show line	Displays the current configuration.
show statistics	Shows the line statistics.
state disable	Disables the line so data cannot be sent/received.
state enable	Enables the line so data can be sent/received.
stop bits 1	Uses one stop bit after data on the line.
stop bits 2	Uses two stop bits after data on the line.
terminal	Enters the configure-terminal level. line> = number of the terminal line (serial port) to be configured.
terminal network	Enters the configure-terminal level for the network.
termination disable	Refrains from terminating the line.
termination enable	Enables 120 ohm line termination in RS485 half-duplex mode.
threshold <td>Sets the threshold in bytes. After this many bytes are received, they are forwarded without delay.</td>	Sets the threshold in bytes. After this many bytes are received, they are forwarded without delay.
tunnel	Enters the tunnel level. line> = number of the tunnel line (serial port) to be configured.
usb <line></line>	Enters the usb level. line> = number of the line (usb port) to be configured.
write	Stores the current configuration in permanent memory.
xoff char <control></control>	Sets the xoff character for use with software flow control on this line. The character may be input as text, control, decimal, or hex. A control character has the form <control>C. A decimal value character has the form \99. A hex value character has the form 0xFF.</control>
xon char <control></control>	Sets the xon character for use with software flow control on this line. The character may be input as text, control, decimal, or hex. A control character has the form <control>C. A decimal value character has the form \99. A hex value character has the form 0xFF.</control>

1.6.160	
default flow control	Restores the default of no flow control.
default full duplex termi- nation	Restores the default termination on this line.
default parity	Restores the default of no parity.
default stop bits	Restores the default of one stop bit.
default threshold	Restores the factory default threshold.
default xoff char	Restores the default xoff character on this line.
default xon char	Restores the default xon character on this line.
exit	Exits to the enable level
flow control hardware	Uses hardware (RTS/CTS) flow control on the line.
flow control none	Does not provide flow control on the line.
flow control software	Uses software (xon/xoff characters) flow control on the line.
full duplex termination disabled	Disables line termination.
full duplex termination termination on rx	Sets line termination on Rx only.
full duplex termination termination on tx	Sets line termination on Tx only.
full duplex termination termination on tx and rx	Sets line termination on Tx and Rx.
gap timer <milliseconds></milliseconds>	Sets the gap timer in milliseconds. If some data has been received, it will be forwarded after this time since the last character.
interface rs232	Sets the line interface to RS232.
interface rs485 full- duplex	Sets the line interface to RS485 in full-duplex mode.
interface rs485 half- duplex	Sets the line interface to RS485 in half-duplex mode.
kill session	Kills command mode session on the Line
line <line></line>	Enters the line level. line> = number of the line (serial port) to be configured.
name <text></text>	Sets the name for this line.
no clear line counters	Restores the serial counters to the aggregate values.
no command mode	Disables command mode for the current line.
no command mode signon message	Clears the signon message displayed at boot time and when entering command mode.
no gap timer	Removes the gap timer, so forwarding depends on the line speed.
no name	Removes the name of this line.
parity even	Uses a parity bit on the line for even parity.
parity none	Does not use a parity bit on the line.
parity odd	Uses a parity bit on the line for odd parity.
protocol modbus ascii	Applies Modbus ASCII protocol on the line.
protocol modbus rtu	Applies Modbus RTU protocol on the line.
protocol none	Uses no protocol on the line.
protocol tunnel	Applies tunnel protocol on the line.
reassert	Asserts line status with current configured values.
show	Displays the current status.
show command mode	Shows the command mode settings for the current line.
show history	Displays the last 20 commands entered during the current CLI session.

show line	Displays the current configuration.
show statistics	Shows the line statistics.
state disable	Disables the line so data cannot be sent/received.
state enable	Enables the line so data can be sent/received.
stop bits 1	Uses one stop bit after data on the line.
stop bits 2	Uses two stop bits after data on the line.
terminal	Enters the configure-terminal level. line> = number of the terminal line (serial port) to be configured.
terminal network	Enters the configure-terminal level for the network.
termination disable	Refrains from terminating the line.
termination enable	Enables 120 ohm line termination in RS485 half-duplex mode.
threshold bytes>	Sets the threshold in bytes. After this many bytes are received, they are forwarded without delay.
tunnel	Enters the tunnel level. line> = number of the tunnel line (serial port) to be configured.
usb <line></line>	Enters the usb level. line> = number of the line (usb port) to be configured.
write	Stores the current configuration in permanent memory.
xoff char <control></control>	Sets the xoff character for use with software flow control on this line. The character may be input as text, control, decimal, or hex. A control character has the form <control>C. A decimal value character has the form \99. A hex value character has the form 0xFF.</control>
xon char <control></control>	Sets the xon character for use with software flow control on this line. The character may be input as text, control, decimal, or hex. A control character has the form <control>C. A decimal value character has the form \99. A hex value character has the form 0xFF.</control>

clrscrn	Clears the screen.
command delimiter <text></text>	Sets the command delimiter.
content check interval <hours></hours>	Sets the firmware and configuration check interval.
default command delimiter	Restores the command delimiter.
default content check interval	Restores the default firmware and configuration check interval.
default local port	Clears the local port for Mach10 client.
default status update interval	Restores the default status update interval.
exit	Exits to the config-mach10 level.
line <number></number>	Change to line configuration level.
local port <number></number>	Sets the local port for Mach10 client. When configured, a total of 16 consecutive ports will be reserved.
no project tag	Restores the default Project Tag.
project tag <text></text>	Sets the Project Tag.
show	Displays the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
state disable	Disables command processing on line.

state enable	Enables command processing on line.
status update interval	Sets the status update interval.
<minutes></minutes>	Dets the status apaate interval.
write	Stores the current configuration in permanent memory.
link (config-wlan:wlan0)	level commands
antenna diversity anten- na 1	Set antenna selection to 1
antenna diversity anten- na 2	Set antenna selection to 2
antenna diversity ena- bled	Set antenna diversity to enabled.
apply wlan	Try out WLAN settings without saving them to Flash. If the settings do not work, when you reboot the device, it will still have the original settings.
band 2.4 ghz only	Sets the radio band to 2.4 GHz only.
band 5 ghz only	Sets the radio band to 5 GHz only.
band auto	Sets the radio band to Auto.
cancel wps	Cancels wi-fi protected setup operation.
choice <instance></instance>	Enters the next lower level. Specify the instance for the next lower level.
clrscrn	Clears the screen.
debugging level debug	Sets the WLAN debugging level to Debug.
debugging level dump	Sets the WLAN debugging level to Dump, the most verbose option.
debugging level error	Sets the WLAN debugging level to Error, which shows only errors.
debugging level info	Sets the WLAN debugging level to Info.
debugging level warning	Sets the WLAN debugging level to Warning.
default antenna diversity	Restore the default value for antenna diversity.
default band	Restores the radio band to the default value (Auto).
default debugging level	Sets the WLAN debugging level to its default value, Info.
default scanning latency	Restores scanning latency to the default value (Standard).
exit	Exit back to interface configuration level
no scanning channel list	Clears the scanning channel list.
scan <ssid></ssid>	Scan the radio environment for networks.
scanning channel list <text></text>	Sets the scanning channel list.
scanning latency en- hanced throughput	Sets scanning latency to Enhanced Throughput.
scanning latency stand- ard	Sets scanning latency to Standard.
show	Displays the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
show wps information	Show the configuration received by wi-fi protected setup.
show wps information with secrets	Show the configuration received by wi-fi protected setup with secrets.
show wps status	Show status of WPS operation.
smartroam	Enter smartroam configuration level
start wps	Starts wi-fi protected setup operation.
start wps pin	Starts wi-fi protected setup operation.
status	Show link status

wifi direct go mode disa- ble	Disables WiFi Direct Group Owner Mode.
wifi direct go mode ena- ble	Enables WiFi Direct Group Owner Mode.
write	Stores the current configuration in permanent memory.
link (config-ethernet:eth	
clrscrn	Clears the screen.
credentials <text></text>	Selects the RSA certificate by configured name.
default duplex	Restores the default duplex setting, which is auto.
default eap-ttls option	Restores the default EAP-TTLS protocol option, which is EAP-MSCHAP V2.
default fast option	Restores the default FAST authentication protocol option, which is MD5.
default fast provisioning	Restores the default FAST provisioning, which is Authenticated
default ieee 802 1x	Restores the default IEEE 802.1x protocol, which is EAP-TTLS.
default peap option	Restores the default PEAP authentication protocol option, which is EAP-MSCHAP V2.
default speed	Restores the default speed setting, which is auto-negotiate.
duplex auto	Sets duplex mode to auto.
duplex full	Sets duplex mode to full.
duplex half	Sets duplex mode to half.
eap-ttls option chap	Sets the EAP-TTLS authentication protocol option to CHAP.
eap-ttls option eap-md5	Sets the EAP-TTLS authentication protocol option to EAP-MD5.
eap-ttls option eap- mschapv2	Sets the EAP-TTLS authentication protocol option to EAP-MSCHAP V2.
eap-ttls option mschap	Sets the EAP-TTLS authentication protocol option to MSCHAP.
eap-ttls option mschapv2	Sets the EAP-TTLS authentication protocol option to MSCHAP V2.
eap-ttls option pap	Sets the EAP-TTLS authentication protocol option to PAP.
eapol disable	Disables EAPoL Authentication.
eapol enable	Enables EAPoL Authentication
exit	Exit back to interface configuration level
fast option gtc	Sets the FAST authentication protocol option to GTC.
fast option md5	Sets the FAST authentication protocol option to MD5.
fast option mschapv2	Sets the FAST authentication protocol option to MSCHAPv2.
fast provisioning authen- ticated	Sets the FAST provisioning option to Authenticated.
fast provisioning both	Sets the FAST provisioning option to Both.
fast provisioning unau- thenticated	Sets the FAST provisioning option to Unauthenticated.
ieee 802 1x eap-tls	Sets the IEEE 802.1x protocol to EAP-TLS.
ieee 802 1x eap-ttls	Sets the IEEE 802.1x protocol to EAP-TTLS.
ieee 802 1x fast	Sets the IEEE 802.1x protocol to FAST.
ieee 802 1x peap	Sets the IEEE 802.1x protocol to PEAP.
inner credentials <text></text>	Selects the RSA certificate by configured name.
no credentials	Clears the RSA certificate name.
no inner credentials	Clears the RSA certificate name.
no password	Clears the password.
no username	Clears the user name.
password <text></text>	Sets the password. <text> = put quotes around the characters (max 63).</text>

peap option eap-md5	Sets the PEAP authentication protocol option to EAP-MD5.
peap option eap- mschapv2	Sets the PEAP authentication protocol option to EAP-MSCHAP V2.
peap option eap-tls	Sets the PEAP authentication protocol option to EAP-TLS.
show	Displays the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
speed 10	Sets the speed of the Ethernet link to 10 Mbps.
speed 100	Sets the speed of the Ethernet link to 100 Mbps.
speed auto	Sets the speed of the Ethernet link to auto-negotiate.
status	Show link status
username <text></text>	Sets the user name.
validate certificate disable	Disables server certificate verification.
validate certificate enable	Enables server certificate verification.
write	Stores the current configuration in permanent memory.
log (config-diagnostics-l	og) level commands
clrscrn	Clears the screen.
default max length	Restores the factory default maximum Log file size.
default output	Restores the default log output, which is disable.
exit	Exits to the next higher level.
max length <kbytes></kbytes>	Sets the maximum size in Kbytes for the Log file.
output bluetooth_serial <pre></pre>	Enables log to bluetooth line.
output disable	Disables log output.
output filesystem	Enables log to filesystem.
output line <number></number>	Enables log to serial line.
output usb <number></number>	Enables log to usb line.
show	Shows the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
write	Stores the current configuration in permanent memory.
mac address filter 1 (con	nfig-mac_filter:1) level commands
action accept	Sets the action to ACCEPT.
action drop	Sets the action to DROP.
clrscrn	Clears the screen.
default action	Restores the default value of action (ACCEPT).
exit	Exits to the config-gateway level.
	Sets the filter MAC Address. Each byte is represented by two adjacent hex digits. Bytes may run together or be separated by optional punctuation: 123ABC "12 3A BC" 12,3A,BC 12.3a.bc 12:3a:bc Note that quotes must enclose the value if it contains spaces.
mac address filter <num- ber></num- 	Change to config mac filter level.
no mac address	Removes the filter MAC Address.
show	Displays the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
write	Stores the current configuration in permanent memory.
mac address filter 2 (con	nfig-mac_filter:2) level commands

action accont	Sets the action to ACCEPT.
action accept	Sets the action to DROP.
action drop	
clrscrn	Clears the screen.
default action	Restores the default value of action (ACCEPT).
exit	Exits to the config-gateway level.
mac address <hexadec- imal></hexadec- 	Sets the filter MAC Address. Each byte is represented by two adjacent hex digits. Bytes may run together or be separated by optional punctuation: 123ABC "12 3A BC" 12,3A,BC 12.3a.bc 12:3a:bc Note that quotes must enclose the value if it contains spaces.
mac address filter <num- ber></num- 	Change to config mac filter level.

write	Stores the current configuration in permanent memory.
mac address filter 8 (coi	nfig-mac_filter:8) level commands
action accept	Sets the action to ACCEPT.
action drop	Sets the action to DROP.
clrscrn	Clears the screen.
default action	Restores the default value of action (ACCEPT).

exit	Exits to the config-gateway level.
mac address <hexadec- imal></hexadec- 	Sets the filter MAC Address. Each byte is represented by two adjacent hex digits. Bytes may run together or be separated by optional punctuation: 123ABC "12 3A BC" 12,3A,BC 12.3a.bc 12:3a:bc Note that quotes must enclose the value if it contains spaces.
mac address filter <num- ber></num- 	Change to config mac filter level.
no mac address	Removes the filter MAC Address.
show	Displays the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
write	Stores the current configuration in permanent memory.
mach10 (config-mach10) level commands
active connection con- nection < <i>number</i> >	Sets active connection to Connection <number>.</number>
apply configuration up- dates always	Sets the action on configuration updates to Always, signifying that the device will always apply configuration updates.
apply configuration up- dates if unchanged	Sets the action on configuration updates to If unchanged, signifying that the device will only apply configuration updates if no changes have been made locally.
apply configuration up- dates never	Sets the action on configuration updates to Never, signifying no configuration updates will be applied.
apply firmware updates disable	Restores the default action on new firmware (do not apply).
apply firmware updates enable	Automatically apply new firmware.
clrscrn	Clears the screen.
connection <instance></instance>	Enters the next lower level. Specify the instance for the next lower level.
content check interval <hours></hours>	Sets the firmware and configuration check interval.
default active connection	Restores the default active connection, which is Connection 1.
default apply configura- tion updates	Restores the default setting for configuration updates (Never).
default content check interval	Restores the default firmware and configuration check interval.
default status update interval	Restores the default status update interval.
device description <text></text>	Sets the Device Description.
device id <text></text>	Sets the Device ID.
device key <text></text>	Sets the Device Key.
device name <text></text>	Sets the Device Name.
exit	Returns to the config level.
line <number></number>	Change to line configuration level.
no device description	Removes the Device Description.
no device id	Removes the Device ID.
no device key	Removes the Device Key.
no device name	Removes the Device Name.
reboot after firmware update disable	Restores the default action when new firmware is applied (reboot)
reboot after firmware update enable	Enables automatic reboot when new firmware is applied.
reboot after update disa-	Restores the default action when new configuration is applied (do not reboot)

ble reboot after update enable show Displays the current configuration. show history Displays the last 20 commands entered during the current CLI session. show statistics Displays the MACH10 statistics. state disable Disables the Mach10 client. state enable Enables the Mach10 client. status update interval Sets the status update interval. write Stores the current configuration in permanent memory. mass storage (filesystem-mass_storage) level commands clrscrn Clears the screen. exit Exits to the next higher level. show Shows the current configuration. show history Displays the last 20 commands entered during the current CLI session. usb auto mount disable Disables automatic mount of connected USB drives.

usb auto mount disable Disables automatic mount of confidence USD unves.
usb auto mount enable Enables automatic mount of connected USB drives.
write Stores the current configuration in permanent memory.
modbus (modbus) level commands
additional port <number> Sets an additional TCP server port.</number>
clrscrn Clears the screen.
default response timeout Restores the default Modbus Response Timeout.
exit Exits to the config level.
kill connection <index> Kills modbus connection selected by index from show connections.</index>
no additional port Removes the additional TCP server port.
response timeout <milli- seconds> Sets the Modbus Response Timeout in milliseconds.</milli-
rss Enters the next lower level.
show Displays the current configuration.
show connections Displays connections.
show history Displays the last 20 commands entered during the current CLI session.
show statistics Displays statistics.
tcp server state disable Disables the Modbus TCP Server.
tcp server state enable Enables the Modbus TCP Server.
write Stores the current configuration in permanent memory.
modem (tunnel-modem:) level commands (line> is the number of the line)
clrscrn Clears the screen.
connect string <text> Sets the CONNECT string used in modem emulation. <string> = connect string.</string></text>
default incoming connections. Default disables incoming network connections.
default response type Default uses text type responses.
display remote ip disable The incoming RING has nothing following it.
display remote ip enable The incoming RING is followed by the IP address of the caller.
echo commands disable Does not echo modem commands.
echo commands enable

echo pluses disable	
	Does not echo the +++ characters when entering modem command mode.
echo pluses enable	Echoes the +++ characters when entering modem command mode.
error unknown com- mands disable	Returns OK on unknown AT commands.
error unknown com- mands enable	Returns an error upon unknown AT commands.
exit	Returns to the tunnel level.
incoming connection automatic	Automatically answer incoming network connections.
incoming connection disabled	Disable incoming network connections.
incoming connection manual	Wait for an ATA command before answering an incoming network connection.
no connect string	Removes optional CONNECT string information for modem emulation.
reassert	Asserts tunnel modem status with current configured values.
response type numeric	Uses numeric type responses.
response type text	Uses text type responses.
show	Displays the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
show status	Displays tunnel modem status.
verbose response disa- ble	Does not send Modem Response Codes.
verbose response enable	Sends Modem Response Codes out on the Serial Line.
write	Stores the current configuration in permanent memory.

state disable Disables script. state enable Enables script.	show	Shows the current configuration.
state enable Enables script.	show history	Displays the last 20 commands entered during the current CLI session.
·	state disable	Disables script.
write Stores the current configuration in permanent memory.	state enable	Enables script.
	write	Stores the current configuration in permanent memory.

python 9 (config-applica	ations-python:9) level commands
clrscrn	Clears the screen.
exit	Exits to the next higher level.
filename <text></text>	Sets the script path.
no filename	Clear the script path.
no output	Clear the script output path.
no parameters	Clear the script parameters.
onshutdown disable	Do not run the script on shutdown.
onshutdown enable	Run the script on shutdown.
onstart disable	Do not run the script on startup.
onstart enable	Run the script on startup.
output <text></text>	Sets the script output path.
parameters <text></text>	Sets the script parameters.
show	Shows the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
state disable	Disables script.
state enable	Enables script.
write	Stores the current configuration in permanent memory.
qos (config-ethernet-qos	s:usb0) level commands
clrscrn	Clears the screen.
default uplink data speed	Restores the default uplink speed.
exit	Exit back to interface configuration level
filter <instance></instance>	Enters the next lower level. Specify the instance for the next lower level.
import filters disable	Do not import QoS filters from other interfaces.
import filters enable	Import QoS filters from other interfaces.
show	Displays the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
show status	Displays the current status
state disable	Disables QoS.
state enable	Enables QoS.
uplink data speed <float- ing point number></float- 	Sets the maximum uplink speed in kbps.
write	Stores the current configuration in permanent memory.
qos (config-wlan-qos:wl	an0) level commands
clrscrn	Clears the screen.
default uplink data speed	Restores the default uplink speed.
exit	Exit back to interface configuration level
filter <instance></instance>	Enters the next lower level. Specify the instance for the next lower level.
import filters disable	Do not import QoS filters from other interfaces.
import filters enable	Import QoS filters from other interfaces.
show	Displays the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
show status	Displays the current status
state disable	Disables QoS.
state enable	Enables QoS.

uplink data speed <float- ing point number></float- 	Sets the maximum uplink speed in kbps.
write	Stores the current configuration in permanent memory.
qos (config-ethernet-qo	s:eth0) level commands
clrscrn	Clears the screen.
default uplink data speed	Restores the default uplink speed.
exit	Exit back to interface configuration level
filter <instance></instance>	Enters the next lower level. Specify the instance for the next lower level.
import filters disable	Do not import QoS filters from other interfaces.
import filters enable	Import QoS filters from other interfaces.
show	Displays the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
show status	Displays the current status
state disable	Disables QoS.
state enable	Enables QoS.
uplink data speed <float- ing point number></float- 	Sets the maximum uplink speed in kbps.
write	Stores the current configuration in permanent memory.
reboot schedule (device	-reboot-schedule) level commands
clrscrn	Clears the screen.
default hours	Restores the default hour of day for reboot schedule time.
default interval	Restores the default schedule interval.
default minutes	Restores the default minutes on the hour for reboot schedule.
default schedule	Restores the default reboot schedule type.
default unit	Restores the default reboot schedule interval unit.
exit	Returns to the previous level.
hours <hours></hours>	Sets the hour of day for reboot schedule (Use 24h time).
interval <number></number>	Sets the reboot schedule interval
minutes <minutes></minutes>	Sets the minutes on the hour for reboot schedule.
schedule daily	Sets the reboot schedule type to 'daily'.
schedule interval	Sets the reboot schedule type to 'interval'.
show	Displays the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
state disable	Disables scheduled reboots.
state enable	Enables scheduled reboots.
unit days	Sets the reboot schedule interval to days.
unit hours	Sets the reboot schedule interval to hours.
unit months	Sets the reboot schedule interval to months.
unit weeks	Sets the reboot schedule interval to weeks.
write	Stores the current configuration in permanent memory.
root level commands	
enable	Enters the enable level.
exit	Exit from the system
iperf <params></params>	Run iperf with command line parameters passed in quoted string.
ping <host></host>	Ping destination continuously with 5 second timeout

ping <host> <count></count></host>	Ping destination n times with 5 second timeout
ping <host> <count> <timeout></timeout></count></host>	Ping destination n times with x timeout (in seconds)
ping6 <host></host>	Ping destination continuously with 5 second timeout
ping6 <host> <count></count></host>	Ping destination n times with 5 second timeout
ping6 <host> <count> <timeout></timeout></count></host>	Ping destination n times with x timeout (in seconds)
show	Show system information
show history	Displays the last 20 commands entered during the current CLI session.
show lines	Show line information
show multicast routes	show state of VIFs and multicast routing tables
show routes	show system routing table
show rules	show system rules
tcpdump <parameters></parameters>	dump traffic on a network
trace route <host></host>	Trace route to destination
trace route <host> <pro- tocol></pro- </host>	Trace route to destination using TCP, ICMP, or UDP
rss (config-rss) level con	mmands
clear rss	Clear the RSS Feed data
clrscrn	Clears the screen.
default max entries	Restores the default number of RSS feed entries.
exit	Exits to the configuration level.
feed disable	Disables RSS feed.
feed enable	Enables RSS feed.
max entries < number>	Sets the maximum number of RSS feed entries.
persist disable	Disables RSS feed data persistence.
persist enable	Enables RSS feed data persistence.
show	Displays the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
show status	Display the RSS Feed status
write	Stores the current configuration in permanent memory.
rss (modbus-rss) level o	commands
clrscrn	Clears the screen.
exit	Exits to the next higher level.
show	Shows the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
trace input disable	Disables RSS trace of Modbus PDUs received on the serial line.
trace input enable	Enables RSS trace of Modbus PDUs received on the serial line.
write	Stores the current configuration in permanent memory.
security (config-security	y) level commands
clrscrn	Clears the screen.
exit	Returns to the config level.
fips 140-2 mode disable	Disables the FIPS 140-2 Mode.
fips 140-2 mode enable	Enables the FIPS 140-2 Mode.
show	Displays the current configuration.

show history	Displays the last 20 commands entered during the current CLI session.
write	Stores the current configuration in permanent memory.
security (config-profile-s	security:default_infrastructure_profile) level commands
advanced	Switch to advanced level
apply wlan	Try out WLAN settings without saving them to Flash. If the settings do not work, when you reboot the device, it will still have the original settings.
basic	Switch to basic level
clrscrn	Clears the screen.
default key type	Restores the key type to the default value (passphrase).
default suite	Restores the security method (suite) to the default value (None).
exit	Exit to the profiles level
key type hex	Sets the key type to hex.
key type passphrase	Sets the key type to passphrase.
no passphrase	Removes the passphrase.
passphrase <text></text>	Sets the passphrase. Maximum 63 characters. <text> = put quotes around characters that make up the passphrase. Please refer to other equipment manuals to determine the recommended passphrase input style. NOTE: A passphrase of 20 characters or more is recommended for maximum security. Spaces and punctuation characters are permitted.</text>
show	Displays the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
suite none	Sets the security suite to None.
suite wep	Sets the security suite to WEP.
suite wpa2-wpa mixed	Sets the security suite to WPA2/WPA Mixed Mode.
wep	Enters the next lower level.
wpax	Enters the next lower level.
write	Stores the current configuration in permanent memory.
serial (tunnel-serial: <lin< td=""><td>e>) level commands (<<i>line</i>> is the number of the line)</td></lin<>	e>) level commands (< <i>line</i> > is the number of the line)
clrscrn	Clears the screen.
default dtr	Restores default DTR control, asserted while connected.
dtr asserted while con- nected	Asserts DTR whenever a connect or accept mode tunnel connection is active.
dtr continuously asserted	Asserts DTR regardless of any connections.
dtr truport	Asserts DTR to match remote DSR when connected via Telnet.
dtr unasserted	Does not assert DTR.
exit	Returns to the tunnel level.
show	Displays the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
write	Stores the current configuration in permanent memory.
server (ssh-server) level	commands
authorized user <username> <password></password></username>	Sets authorized username, password, and optionally RSA and/or DSA public keys
clrscrn	Clears the screen.
delete all authorized users	Removes all authorized users
delete authorized user <username></username>	Remove an authorized user
exit	Exits to the ssh level.

host generate dsa 1024	Generate DSA public and private keys
host generate dsa 512	Generate DSA public and private keys
host generate dsa 768	Generate DSA public and private keys
host generate rsa 1024	Generate RSA public and private keys
host generate rsa 2048	Generate RSA public and private keys
host generate rsa 4096	Generate RSA public and private keys
host generate rsa 512	Generate RSA public and private keys
host generate rsa 768	Generate RSA public and private keys
host keys	Sets RSA or DSA public and/or private keys
no host dsa	Removes DSA public and private keys
no host rsa	Removes RSA public and private keys
show	Show SSH Server settings
show authorized user <username></username>	Show information for an authorized user
show history	Displays the last 20 commands entered during the current CLI session.
show host dsa	Show full DSA public key
show host rsa	Show full RSA public key
write	Stores the current configuration in permanent memory.
sftp (config-sftp) level c	ommands
clrscrn	Clears the screen.
exit	Returns to the config level.
sftp state disable	Disables SFTP Server.
sftp state enable	Enables SFTP Server.
show	Displays the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
show statistics	Displays the SFTP statistics.
write	Stores the current configuration in permanent memory.
smartroam (link-smartro	pam:wlan0) level commands
clrscrn	Clears the screen.
default level	Restores the default roaming level, which is Low.
default rssi delta 2.4ghz	Restores the default RSSI Delta value for 2.4GHz band based on current roaming level.
default rssi delta 5ghz	Restores the default RSSI Delta value for 5GHz band based on current roaming level.
default scan interval	Restores the default scan interval based on current roaming level.
default scan threshold 2.4ghz	Restores the default Threshold value for 2.4GHz band based on current roaming level.
default scan threshold 5ghz	Restores the default Threshold value for 5GHz band based on current roaming level.
exit	Exit back to interface configuration level
level custom	Sets the roaming level to Custom.
level high	Sets the roaming level to High.
level low	Sets the roaming level to Low.
level medium	Sets the roaming level to Medium.
roaming disable	Disables Smart Roaming.
roaming enable	Enables Smart Roaming.
rssi delta 2.4ghz <dbm></dbm>	Sets the RSSI Delta value for 2.4GHz band.

rssi delta 5ghz <dbm></dbm>	Sets the RSSI Delta value for 5GHz band.
scan interval < seconds>	Sets the scan interval.
scan threshold 2.4ghz <text></text>	Sets the Threshold value for 2.4GHz band.
scan threshold 5ghz <text></text>	Sets the Threshold value for 5GHz Band.
show	Displays the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
write	Stores the current configuration in permanent memory.
smtp (config-smtp) leve	commands
clrscrn	Clears the screen.
default local port	Clears the local port for SMTP client.
default server port	Restores the SMTP server port to its default.
exit	Exits to the configuration level.
from address <text></text>	Sets the From address for email alerts. <text> = email address to place in the From field of the email alert.</text>
local port <number></number>	Sets the local port for SMTP client.
no from address	Removes the From address for email alerts.
no overriding domain	Removes the overriding domain name option.
no password	Removes the password.
no server address	Removes the SMTP server address.
no username	Removes the username.
overriding domain <text></text>	Sets a domain name that will be used when connecting to an SMTP server to send an email alert instead of the device domain name in EHLO. <text> = domain name to override the current domain name in EHLO.</text>
password <text></text>	Sets the password for logging in to the mail server.
server address <text></text>	Sets an SMTP server address to direct all outbound email messages through a mail server.
server port <number></number>	Sets the SMTP server port.
show	Displays the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
username <text></text>	Sets the username for logging in to the mail server.
write	Stores the current configuration in permanent memory.
snmp (config-snmp) leve	el commands
clrscrn	Clears the screen.
exit	Returns to the config level.
no system location	Clears the SNMP system location.
show	Displays the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
show status	Displays the SNMP agent status.
snmpd	Enters the next lower level.
system location <text></text>	Sets the SNMP system location. <text> = location of device.</text>
traps	Enters the next lower level.
write	Stores the current configuration in permanent memory.
snmp trap (config-action	n-snmp_trap:wlan0 link state change) level commands
alarm message <text></text>	Sets the message to be sent when the alarm turns on.

clrscrn	Clears the screen.
exit	Exits to the next higher level.
no alarm message	Removes the alarm message.
no normal message	Removes the normal message.
no reminder interval	Clears the SNMP Trap reminder interval. SNMP Trap is sent once only.
	Sets the message to be sent when the alarm turns off.
normal message <text></text>	-
<pre><minutes></minutes></pre>	Sets the SNMP Trap reminder interval.
show	Shows the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
state disable	Does not send SNMP Trap.
state enable	Sends SNMP Trap when alarm condition is met.
write	Stores the current configuration in permanent memory.
snmp trap (config-action	n-snmp_trap:usb0 link state change) level commands
alarm message <text></text>	Sets the message to be sent when the alarm turns on.
clrscrn	Clears the screen.
exit	Exits to the next higher level.
no alarm message	Removes the alarm message.
no normal message	Removes the normal message.
no reminder interval	Clears the SNMP Trap reminder interval. SNMP Trap is sent once only.
normal message <text></text>	Sets the message to be sent when the alarm turns off.
reminder interval <minutes></minutes>	Sets the SNMP Trap reminder interval.
show	Shows the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
state disable	Does not send SNMP Trap.
state enable	Sends SNMP Trap when alarm condition is met.
write	Stores the current configuration in permanent memory.
snmp trap (config-action	n-snmp_trap:on scheduled reboot) level commands
alarm message <text></text>	Sets the message to be sent when the alarm turns on.
clrscrn	Clears the screen.
exit	Exits to the next higher level.
no alarm message	Removes the alarm message.
no normal message	Removes the normal message.
no reminder interval	Clears the SNMP Trap reminder interval. SNMP Trap is sent once only.
normal message <text></text>	Sets the message to be sent when the alarm turns off.
reminder interval <minutes></minutes>	Sets the SNMP Trap reminder interval.
show	Shows the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
state disable	Does not send SNMP Trap.
state enable	Sends SNMP Trap when alarm condition is met.
write	Stores the current configuration in permanent memory.
	n-snmp_trap:eth0 link state change) level commands
alarm message <text></text>	Sets the message to be sent when the alarm turns on.
	1

clrscrn	Clears the screen.
exit	Exits to the next higher level.
no alarm message	Removes the alarm message.
no normal message	Removes the normal message.
no reminder interval	Clears the SNMP Trap reminder interval. SNMP Trap is sent once only.
normal message <text></text>	Sets the message to be sent when the alarm turns off.
reminder interval	Sets the SNMP Trap reminder interval.
<minutes></minutes>	Cote the Critin Trap rottings interval.
show	Shows the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
state disable	Does not send SNMP Trap.
state enable	Sends SNMP Trap when alarm condition is met.
write	Stores the current configuration in permanent memory.
snmpd (config-snmp-sn	mpd) level commands
authentication password <text></text>	Sets password used for authentication for agent.
authentication protocol md5	Uses MD5 for authentication for agent.
authentication protocol sha	Uses SHA for authentication for agent.
clrscrn	Clears the screen.
default authentication protocol	Restores to default SNMPv3 authentication method: MD5 for agent.
default port	Restores the SNMP agent port to default: 161.
default privacy protocol	Restores to default SNMPv3 privacy encryption method: DES for agent.
default read community	Restores the SNMP read-only community to default: public
default read-only authen- tication protocol	Restores to default SNMPv3 read-only authentication method: MD5 for agent.
default read-only privacy protocol	Restores to default SNMPv3 read-only privacy encryption method: DES for agent.
default read-only security	Restores to default SNMPv3 read-only security method: Authentication, No Privacy for agent.
default security	Restores to default SNMPv3 security method: Authentication, No Privacy for agent.
default system description	Restores the SNMP system description to its default.
default system name	Restores the SNMP system name to default: the product name.
default version	Restores to default SNMP version v2c for agent.
default write community	Clears the SNMP read/write community to default: private
exit	Exits to the next higher level.
no authentication pass- word	Clears authentication password for agent.
no privacy password	Clears privacy password for agent.
no read-only authentication password	Clears read-only authentication password for agent.
no read-only privacy password	Clears read-only privacy password for agent.
no read-only username	Clears SNMPv3 read-only username for agent.
no system contact	Clears the SNMP system contact.

	OL OVER C
no username	Clears SNMPv3 username for agent.
port <number></number>	Sets the SNMP agent port.
privacy password <text></text>	Sets password used for privacy encryption for agent.
privacy protocol aes	Uses AES for privacy encryption for agent.
privacy protocol des	Uses DES for privacy encryption for agent.
read community <text></text>	Sets the SNMP read-only community string. <text> = name of the read-only community string to be set.</text>
read-only authentication password <text></text>	Sets password used for read-only authentication for agent.
read-only authentication protocol md5	Uses MD5 for read-only authentication for agent.
read-only authentication protocol sha	Uses SHA for read-only authentication for agent.
read-only privacy pass- word <text></text>	Sets password used for read-only privacy encryption for agent.
read-only privacy proto- col aes	Uses AES for read-only privacy encryption for agent.
read-only privacy proto- col des	Uses DES for read-only privacy encryption for agent.
read-only security authentication and privacy	Authentication and Privacy for agent.
read-only security au- thentication but no priva- cy	Authentication, No Privacy for agent.
read-only security no authentication and no priv	No Authentication, No Privacy for agent.
read-only username <text></text>	Sets SNMPv3 read-only username for agent.
security authentication and privacy	Authentication and Privacy for agent.
security authentication but no privacy	Authentication, No Privacy for agent.
security no authentication and no priv	No Authentication, No Privacy for agent.
show	Shows the current configuration.
show engine id	Displays the SNMP agent engine ID.
show history	Displays the last 20 commands entered during the current CLI session.
state disable	Disables the SNMP agent.
state enable	Enables the SNMP agent.
system contact <text></text>	Sets the SNMP system contact information. <text> = system contact information.</text>
system description <text></text>	Sets the SNMP system description. <text> = description of device.</text>
system name <text></text>	Sets the SNMP system name. <text> = SNMP system name.</text>
username <text></text>	Sets SNMPv3 username for agent.
version snmpv1	Uses SNMPv1 for agent.
version snmpv2c	Uses SNMPv2c for agent.
version snmpv3	Uses SNMPv3 for agent.
write	Stores the current configuration in permanent memory.
write community <text></text>	Sets the SNMP read-write community string. <text> = name of the read-write community</text>
,	, , ,

	string to be set.
ssh (ssh) level comman	<u> </u>
client	Enters the SSH Client configuration level.
clrscrn	Clears the screen.
	Exits to the enable level.
exit	
server	Enters the SSH Server configuration level.
show history	Displays the last 20 commands entered during the current CLI session.
write	Stores the current configuration in permanent memory.
ssh (config-cli-ssh) leve	
clrscrn	Clears the screen.
default max sessions	Restores the default maximum allowed concurrent incoming SSH sessions.
default port	Restores the default local port to the SSH server.
exit	Exits to the CLI level.
max sessions <number></number>	Sets the maximum allowed concurrent incoming SSH sessions. <number> = number of sessions.</number>
port <number></number>	Sets the local port that the SSH server uses. <number> = local port number.</number>
show	Displays the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
show statistics	Displays the SSH server statistics.
state disable	Disables the SSH Server.
state enable	Enables the SSH Server.
write	Stores the current configuration in permanent memory.
ssl (ssl) level command	
ssi (ssi) level collilland	S
clrscrn	Clears the screen.
	I
clrscrn	Clears the screen.
clrscrn credentials	Clears the screen. Enters the SSL credentials configuration level.
clrscrn credentials delete csr	Clears the screen. Enters the SSL credentials configuration level. Delete generated CSR (Certificate Signing Request).
clrscrn credentials delete csr exit	Clears the screen. Enters the SSL credentials configuration level. Delete generated CSR (Certificate Signing Request). Exits to the enable level.
clrscrn credentials delete csr exit generate csr	Clears the screen. Enters the SSL credentials configuration level. Delete generated CSR (Certificate Signing Request). Exits to the enable level. Generate a new CSR (Certificate Signing Request).
clrscrn credentials delete csr exit generate csr show history	Clears the screen. Enters the SSL credentials configuration level. Delete generated CSR (Certificate Signing Request). Exits to the enable level. Generate a new CSR (Certificate Signing Request). Displays the last 20 commands entered during the current CLI session.
clrscrn credentials delete csr exit generate csr show history trusted authorities	Clears the screen. Enters the SSL credentials configuration level. Delete generated CSR (Certificate Signing Request). Exits to the enable level. Generate a new CSR (Certificate Signing Request). Displays the last 20 commands entered during the current CLI session. Enters the SSL configuration level.
clrscrn credentials delete csr exit generate csr show history trusted authorities view csr write	Clears the screen. Enters the SSL credentials configuration level. Delete generated CSR (Certificate Signing Request). Exits to the enable level. Generate a new CSR (Certificate Signing Request). Displays the last 20 commands entered during the current CLI session. Enters the SSL configuration level. View generated CSR (Certificate Signing Request).
clrscrn credentials delete csr exit generate csr show history trusted authorities view csr write	Clears the screen. Enters the SSL credentials configuration level. Delete generated CSR (Certificate Signing Request). Exits to the enable level. Generate a new CSR (Certificate Signing Request). Displays the last 20 commands entered during the current CLI session. Enters the SSL configuration level. View generated CSR (Certificate Signing Request). Stores the current configuration in permanent memory.
clrscrn credentials delete csr exit generate csr show history trusted authorities view csr write static leases 1 (config-d	Clears the screen. Enters the SSL credentials configuration level. Delete generated CSR (Certificate Signing Request). Exits to the enable level. Generate a new CSR (Certificate Signing Request). Displays the last 20 commands entered during the current CLI session. Enters the SSL configuration level. View generated CSR (Certificate Signing Request). Stores the current configuration in permanent memory. hcpd-static_leases:1) level commands
clrscrn credentials delete csr exit generate csr show history trusted authorities view csr write static leases 1 (config-d clrscrn	Clears the screen. Enters the SSL credentials configuration level. Delete generated CSR (Certificate Signing Request). Exits to the enable level. Generate a new CSR (Certificate Signing Request). Displays the last 20 commands entered during the current CLI session. Enters the SSL configuration level. View generated CSR (Certificate Signing Request). Stores the current configuration in permanent memory. hcpd-static_leases:1) level commands Clears the screen.
clrscrn credentials delete csr exit generate csr show history trusted authorities view csr write static leases 1 (config-d clrscrn exit	Clears the screen. Enters the SSL credentials configuration level. Delete generated CSR (Certificate Signing Request). Exits to the enable level. Generate a new CSR (Certificate Signing Request). Displays the last 20 commands entered during the current CLI session. Enters the SSL configuration level. View generated CSR (Certificate Signing Request). Stores the current configuration in permanent memory. hcpd-static_leases:1) level commands Clears the screen. Exits to the config-dhcpd level.
clrscrn credentials delete csr exit generate csr show history trusted authorities view csr write static leases 1 (config-d clrscrn exit ip address < IP address>	Clears the screen. Enters the SSL credentials configuration level. Delete generated CSR (Certificate Signing Request). Exits to the enable level. Generate a new CSR (Certificate Signing Request). Displays the last 20 commands entered during the current CLI session. Enters the SSL configuration level. View generated CSR (Certificate Signing Request). Stores the current configuration in permanent memory. hcpd-static_leases:1) level commands Clears the screen. Exits to the config-dhcpd level. Sets the reserved IP address.
clrscrn credentials delete csr exit generate csr show history trusted authorities view csr write static leases 1 (config-d clrscrn exit ip address < IP address> ipv6 address < ipv6 ad-	Clears the SCL credentials configuration level. Delete generated CSR (Certificate Signing Request). Exits to the enable level. Generate a new CSR (Certificate Signing Request). Displays the last 20 commands entered during the current CLI session. Enters the SSL configuration level. View generated CSR (Certificate Signing Request). Stores the current configuration in permanent memory. hcpd-static_leases:1) level commands Clears the screen. Exits to the config-dhcpd level. Sets the reserved IP address. Sets the reserved IPv6 address. write	Stores the current configuration in permanent memory.
traps (config-snmp-traps	s) level commands
authentication password <text></text>	Sets password used for authentication for traps.
authentication protocol md5	Uses MD5 for authentication for traps.
authentication protocol sha	Uses SHA for authentication for traps.
clrscrn	Clears the screen.
community <text></text>	Sets the SNMP trap community string. <text> = name of the trap community string to be set.</text>
default authentication protocol	Restores to default SNMPv3 authentication method: MD5 for traps.
default community	Restores the SNMP trap community to default: public
default primary destination port	Restores the primary SNMP trap host port to default: 162.
default privacy protocol	Restores to default SNMPv3 privacy encryption method: DES for traps.
default secondary desti- nation port	Restores the secondary SNMP trap host port to default: 162.
default security	Restores to default SNMPv3 security method: Authentication, No Privacy for traps.
default version	Restores to default SNMP version v2c for traps.
exit	Exits to the next higher level.
no authentication pass- word	Clears authentication password for traps.
no primary destination	Deletes the primary SNMP trap host.
no privacy password	Clears privacy password for traps.
no secondary destination	Deletes the secondary SNMP trap host.
no username	Clears SNMPv3 username for traps.
primary destination <text></text>	Sets the primary SNMP trap host. <text> = IP address or hostname of SNMP trap receiver.</text>
primary destination port <pre><number></number></pre>	Sets the primary SNMP trap host port.
privacy password <text></text>	Sets password used for privacy encryption for traps.
privacy protocol aes	Uses AES for privacy encryption for traps.
privacy protocol des	Uses DES for privacy encryption for traps.
secondary destination	Sets the secondary SNMP trap host. <text> = IP address or hostname of SNMP trap re-</text>

<text></text>	ceiver.
secondary destination port <number></number>	Sets the secondary SNMP trap host port.
security authentication and privacy	Authentication and Privacy for traps.
security authentication but no privacy	Authentication, No Privacy for traps.
security no authentication and no priv	No Authentication, No Privacy for traps.
show	Shows the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
username <text></text>	Sets SNMPv3 username for traps.
version snmpv1	Uses SNMPv1 for traps.
version snmpv2c	Uses SNMPv2c for traps.
version snmpv3	Uses SNMPv3 for traps.
write	Stores the current configuration in permanent memory.
trusted authorities (ssl-a	auth) level commands
add	Adds an Authority Certificate.
clrscrn	Clears the screen.
exit	Exits to the ssl level.
no intermediate authority <cert></cert>	Removes an Intermediate Authority Certificate. <cert> = index displayed by "show authority" command.</cert>
no trusted authority <cert></cert>	Removes a Trusted Authority Certificate. <cert> = index displayed by "show authority" command.</cert>
show	Displays Authority Certificate Information.
show history	Displays the last 20 commands entered during the current CLI session.
write	Stores the current configuration in permanent memory.
tunnel < line> (tunnel: < line)	ne>level commands (<line> is the number of the line)</line>
accept	Enters the accept level for this tunnel.
auto show statistics	show connection statistics
bluetooth serial	Enters the bluetooth serial level. line> = number of the line (bluetooth serial port) to be configured.
clear counters	Zeros all tunnel counters
clrscrn	Clears the screen.
connect	Enters the connect level for this tunnel.
disconnect	Enters the disconnect level for this tunnel.
exit	Exits to the enable level.
line	Enters the line level. line> = number of the line (serial port) to be configured.
modem	Enters the modem level for this tunnel.
no clear counters	Unzeros all tunnel counters
packing	Enters the packing level for this tunnel.
serial	Enters the serial level for this tunnel.
show history	Displays the last 20 commands entered during the current CLI session.
show statistics	show connection statistics
terminal <line></line>	Enters the configure-terminal level. line> = number of the terminal line (serial port) to be
	configured.

tunnel <line></line>	Enters the tunnel level. line> = number of the tunnel line (serial port) to be configured.
usb	Enters the usb level. line> = number of the line (usb port) to be configured.
write	Stores the current configuration in permanent memory.
	tion (config-vpn-unreachable_host_detection:1) level commands
clrscrn	Clears the screen.
default max tries	Restores the default connection error threshold.
default ping interval	Restores the default ping interval.
exit	Exits to the next higher level.
host <text></text>	Sets the host name. <text> = host name to Ping.</text>
max tries <number></number>	Sets the connection error threshold. If <pings> attempts go unanswered, the device will restart the VPN connection.</pings>
no host	Clears the host name.
ping interval <minutes></minutes>	Sets the ping interval.
show	Shows the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
write	Stores the current configuration in permanent memory.
usb 1 (usb-line:1) level (commands
auto show statistics	Continuously displays line statistics.
baud rate <bits per="" sec-<="" td=""><td>Sets the line speed. bits per second> = the speed. Standard speeds include 1200, 2400, 4800, 9600, 19200, and so on.</td></bits>	Sets the line speed. bits per second> = the speed. Standard speeds include 1200, 2400, 4800, 9600, 19200, and so on.
bluetooth serial	Enters the bluetooth serial level. line> = number of the line (bluetooth serial port) to be configured.
clear line counters	Sets the serial counters to zero.
clrscrn	Clears the screen.

Uses eight bits for data on the line. Restores the default speed of 115200 bits per second. Restores the default of hardware (RTS/CTS) flow control. Restores the default usb line mode.</milliseconds></string></string>

default xoff char	Restores the default xoff character on this line.
default xon char	Restores the default xon character on this line.
exit	Exits to the enable level
flow control hardware	Uses hardware (RTS/CTS) flow control on the line.
flow control none	Does not provide flow control on the line.
flow control software	Uses software (xon/xoff characters) flow control on the line.
gap timer <milliseconds></milliseconds>	Sets the gap timer in milliseconds. If some data has been received, it will be forwarded after this time since the last character.
interface usb-cdc-acm	Sets the usb line interface to USB-CDC-ACM.
kill session	Kills command mode session on the Line
line	Enters the line level. line> = number of the line (serial port) to be configured.
line mode ethernet de- vice	Sets the usb line to ethernet device mode.
line mode host	Sets the usb line to host mode.
line mode serial device	Sets the usb line to serial device mode.
name <text></text>	Sets the name for this usb line.
no clear line counters	Restores the serial counters to the aggregate values.
no command mode	Disables command mode for the current line.
no command mode signon message	Clears the signon message displayed at boot time and when entering command mode.
no gap timer	Removes the gap timer, so forwarding depends on the usb line speed.
no name	Removes the name of this usb line.
parity even	Uses a parity bit on the line for even parity.
parity none	Does not use a parity bit on the line.
parity odd	Uses a parity bit on the line for odd parity.
protocol none	Uses no protocol on the usb line.
protocol tunnel	Applies Modbus RTU protocol on the usb line.
show	Displays the current status.
show command mode	Shows the command mode settings for the current line.
show history	Displays the last 20 commands entered during the current CLI session.
show statistics	Shows the line statistics.
show usb line	Displays the current configuration.
state disable	Disables the usb line so data cannot be sent/received.
state enable	Enables the usb line so data can be sent/received.
stop bits 1	Uses one stop bit after data on the line.
stop bits 2	Uses two stop bits after data on the line.
terminal	Enters the configure-terminal level. line> = number of the terminal line (serial port) to be configured.
terminal network	Enters the configure-terminal level for the network.
threshold bytes>	Sets the threshold in bytes. After this many bytes are received, they are forwarded without delay.
tunnel	Enters the tunnel level. line> = number of the tunnel line (serial port) to be configured.
usb	Enters the usb level. line> = number of the line (usb port) to be configured.
write	Stores the current configuration in permanent memory.
xoff char <control></control>	Sets the xoff character for use with software flow control on this line. The character may be input as text, control, decimal, or hex. A control character has the form <control>C. A decimal value character has the form 0xFF.</control>

xon char < <i>control</i> >	Sets the xon character for use with software flow control on this line. The character may be input as text, control, decimal, or hex. A control character has the form <control>C. A decimal value character has the form \99. A hex value character has the form 0xFF.</control>
usb0 link state change (config-action:usb0 link state change) level commands
clrscrn	Clears the screen.
default delay	Resets alarm processing delay to its default value.
delay <seconds></seconds>	Sets the delay in processing the alarm. Alarm actions will not be executed if the cause is corrected within this time.
email	Enters the next lower level.
exit	Exits to the config alarm level.
ftp put	Enters the next lower level.
http post	Enters the next lower level.
show	Displays the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
show status	Displays statistics.
snmp trap	Enters the next lower level.
write	Stores the current configuration in permanent memory.
user management (confi	g-user-management) level commands
admin password <text></text>	Sets the CLI login password. Password must be 4 to 15 characters and contain combination of the following characters: uppercase letters, lowercase letters, numbers, symbols (punctuation marks). Put double quotes around the password.
admin username <text></text>	Sets the CLI login username.
clrscrn	Clears the screen.
create role <role name=""></role>	Create a new role <role name=""> = role name.</role>
create user <user name=""> <password> <role name=""></role></password></user>	Create a new user <user name=""> = user name. <password> = user password. Password must be 4 to 15 characters and contain combination of the following characters: uppercase letters, lowercase letters, numbers, symbols (punctuation marks). Put double quotes around the password. <role name=""> = user role name.</role></password></user>
default admin password	Restores the default CLI login password.
default admin username	Restores the default CLI login username.
delete role <role instance="" name="" or=""></role>	Delete existing role <role instance="" name="" or=""> = role name or instance.</role>
delete user <user instance="" name="" or=""></user>	Delete existing user <user instance="" name="" or=""> = user name or instance.</user>
edit role <role instance="" name="" or=""></role>	Change to config-user-management-roles level.
edit user <user instance="" name="" or=""></user>	Change to config-user-management-users level.
exit	Returns to the config level.
show	Displays the current configuration.
show actions	List Actions to the console
show configuration groups	List Configuration Record group names to the console
show history	Displays the last 20 commands entered during the current CLI session.
show roles	Show existing roles
show users	Show existing users
write	Stores the current configuration in permanent memory.
virtual ip 1 (config-virtua	al-interface:1) level commands

exit Exits to the config-gateway level. ip address <text> Sets the Virtual IP address. lan ip address <text> Sets the LAN IP address. no ip address Clears the LAN IP address. no lan ip address Clears the Virtual IP address. no lan ip address Clears the Virtual IP address. no lan ip address Clears the LAN IP address. no lan ip address Clears the name. show Displays the current configuration. show history Displays the last 20 commands entered during the current CLI session. state disable Disables Virtual IP instance. state disable Enables Virtual IP instance. state disable Stores the current configuration in permanent memory. virtual ip 2 (config-virtual-interface:2) lovel commands clears the careen. exit Exits to the config-gateway level. ip address <text> Sets the LAN IP address. lan ip address <text> Sets the LAN IP address. no lan ip address Clears the screen. show Displays the current configuration. show history Displays the last 20 commands entered during the current CLI session. state disable Show Displays the current configuration. show bistory Displays the current configuration. show bistory Displays the last 20 commands entered during the current CLI session. state disable Enables Virtual IP instance. Ian ip address <text> Sets the LAN IP address. name <text> Sets the name. <text> = name. no ip address</text></text></text>	exit	Exits to the config-gateway level.
name <text> Sets the name. <text> = name. Clears the Virtual IP address. Clears the LAN IP address. Clears the name. Clears the name. Clears the name. Show Displays the current configuration. Show history Displays the last 20 commands entered during the current CLI session. State disable Disables Virtual IP instance. Enables Virtual IP instance.</text></text>	ip address <text></text>	Sets the Virtual IP address.
no ip address Clears the Virtual IP address. Clears the LAN IP address. Clears the name. Clears the name. Displays the current configuration. Show history Displays the last 20 commands entered during the current CLI session. State disable Disables Virtual IP instance. Enables Virtual IP instance.	lan ip address <text></text>	Sets the LAN IP address.
no lan ip address Clears the LAN IP address. Clears the name. Show Displays the current configuration. Show history Displays the last 20 commands entered during the current CLI session. State disable Disables Virtual IP instance. State enable Enables Virtual IP instance.	name <text></text>	Sets the name. <text> = name.</text>
no name Clears the name. show Displays the current configuration. show history Displays the last 20 commands entered during the current CLI session. state disable Disables Virtual IP instance. state enable Enables Virtual IP instance.	no ip address	Clears the Virtual IP address.
show Displays the current configuration. show history Displays the last 20 commands entered during the current CLI session. state disable Disables Virtual IP instance. state enable Enables Virtual IP instance.	no lan ip address	Clears the LAN IP address.
show history Displays the last 20 commands entered during the current CLI session. state disable Disables Virtual IP instance. state enable Enables Virtual IP instance.	no name	Clears the name.
state disable Disables Virtual IP instance. state enable Enables Virtual IP instance.	show	Displays the current configuration.
state enable Enables Virtual IP instance.	show history	Displays the last 20 commands entered during the current CLI session.
	state disable	Disables Virtual IP instance.
write Stores the current configuration in permanent memory.	state enable	Enables Virtual IP instance.
	write	Stores the current configuration in permanent memory.
vpn 1 (config-vpn:1) level commands	vpn 1 (config-vpn:1) leve	el commands
aggressive mode disable Disables aggressive mode.	aggressive mode disable	Disables aggressive mode.
aggressive mode enable Enables aggressive mode.	aggressive mode enable	Enables aggressive mode.
authentication mode psk Sets the authentication mode to PSK.	authentication mode psk	Sets the authentication mode to PSK.

authentication mode rsa	Sets the authentication mode to RSA.
authentication mode xauth	Sets the authentication mode to XAUTH.
clrscrn	Clears the screen.
connection name <text></text>	Sets the name. <text> = name.</text>
connection type host to host	Sets the connection type to Host to Host.
connection type host to subnet	Sets the connection type to Host to Subnet.
create new local rsa key	Create new Local RSA key
default authentication mode	Restores the default authentication mode.
default connection type	Restores the default connection type.
default esp authentication	Restores the default ESP authentication.
default esp dh group	Restores the default ESP DH Group.
default esp encryption	Restores the default ESP encryption.
default ike authentication	Restores the default IKE authentication.
default ike dh group	Restores the default IKE DH Group.
default ike encryption	Restores the default IKE encryption.
default ike life time	Restores the default IKE lifetime.
default ikev2	Restores the default IKEv2 setting (Permit).
default interface	Restores the default interface.
default local key length	Restores the default local RSA key length.
default remote peer type	Restores the default remote peer type.
default sa life time	Restores the default SA lifetime.
default type	Restores the default transport type.
esp authentication any	Sets ESP authentication to any.
esp authentication md5	Sets ESP authentication to MD5.
esp authentication sha1	Sets ESP authentication to SHA1.
esp authentication sha2	Sets ESP authentication to SHA2.
esp dh group any	Sets ESP DH Group to any.
esp dh group dh1	Sets ESP DH Group to DH1.
esp dh group dh14	Sets ESP DH Group to DH14.
esp dh group dh2	Sets ESP DH Group to DH2.
esp dh group dh5	Sets ESP DH Group to DH5.
esp encryption 3des	Sets ESP encryption to 3DES.
esp encryption aes128	Sets ESP encryption to AES-128.
esp encryption aes256	Sets ESP encryption to AES-256.
esp encryption any	Sets ESP encryption to any.
esp encryption des	Sets ESP encryption to DES.
exit	Exits to the config level.
ike authentication any	Sets IKE authentication to any.
ike authentication md5	Sets IKE authentication to MD5.
ike authentication sha1	Sets IKE authentication to SHA1.
ike authentication sha2	Sets IKE authentication to SHA2.

ike dh group any	Sets IKE DH Group to any.
ike dh group dh1	Sets IKE DH Group to DH1.
ike dh group dh14	Sets IKE DH Group to DH14.
ike dh group dh2	Sets IKE DH Group to DH2.
ike dh group dh5	Sets IKE DH Group to DH5.
ike encryption 3des	Sets IKE encryption to 3DES.
ike encryption aes128	Sets IKE encryption to AES-128.
ike encryption aes256	Sets IKE encryption to AES-256.
ike encryption any	Sets IKE encryption to any.
ike encryption des	Sets IKE encryption to DES.
ike life time <hours></hours>	Sets the IKE lifetime.
ikev2 insist	Sets the IKEv2 setting to Insist, signifying that the device will only accept and receive IKEv2 and IKEv1 negotiations will be rejected.
ikev2 never	Sets the IKEv2 setting to Never, signifying no IKEv2 negotiation should be transmitted or accepted.
ikev2 permit	Sets the IKEv2 setting to Permit, signifying no IKEv2 should be transmitted, but will be accepted if the other ends initiates to us with IKEv2.
ikev2 propose	Sets the IKEv2 setting to Propose, signifying that the device will permit IKEv2, and also use it as the default to initiate.
interface <text></text>	Sets the interface. <text> = interface.</text>
local id <text></text>	Sets the local id. <text> = local id.</text>
local key length bits>	Sets the local RSA key length.
local next hop <text></text>	Sets the local next hop. <text> = local next hop.</text>
local subnet <text></text>	Sets the local subnet. <text> = local subnet.</text>
mode configuration disable	Disables mode configuration.
mode configuration ena- ble	Enables mode configuration.
nat traversal disable	Disables NAT traversal.
nat traversal enable	Enables NAT traversal.
no connection name	Clears the name.
no local id	Clears the local id.
no local next hop	Clears the local next hop.
no local subnet	Clears the local subnet.
no password	Clears the password.
no psk	Clears the pre shared key.
no remote endpoint	Clears the remote end point.
no remote id	Clears the remote id.
no remote key	Clears the remote key.
no remote next hop	Clears the remote next hop.
no remote rsa key	Clears the remote RSA key.
no remote subnet	Clears the remote subnets.
no username	Clears the username.
password <text></text>	Sets the password. <text> = password.</text>
perfect forward secrecy disable	Disables perfect forward secrecy (PFS).
perfect forward secrecy	Enables perfect forward secrecy (PFS).

enable	
psk <text></text>	Sets the pre shared key (PSK). <text> = pre shared key.</text>
remote endpoint <text></text>	Sets the remote end point. <text> = remote end point.</text>
remote id <text></text>	Sets the remote id. <text> = remote id.</text>
remote key <text></text>	Sets the remote key. <text> = remote key.</text>
remote next hop <text></text>	Sets the remote next hop. <text> = remote next hop.</text>
remote peer type cisco	Sets the remote peer type to cisco.
remote peer type ietf	Sets the remote peer type to ietf.
remote rsa key <text></text>	Sets the remote RSA key. <text> = remote RSA key.</text>
remote subnet <text></text>	Sets the remote subnets. <text> = remote subnets.</text>
sa life time <hours></hours>	Sets the SA lifetime.
show	Displays the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
show local rsa key	Show Local RSA key
show logs	Show logs
show status	Show VPN status
state disable	Disables VPN tunnel.
state enable	Enables VPN tunnel.
type transport	Sets the transport type to transport.
type tunnel	Sets the transport type to tunnel.
unreachable host detection	Enters the next lower level.
username <text></text>	Sets the username. <text> = username.</text>
vpn <instance></instance>	Change to vpn level.
write	Stores the current configuration in permanent memory.
wep (config-profile-secu	rity-wep:default_infrastructure_profile) level commands
apply wlan	Try out WLAN settings without saving them to Flash. If the settings do not work, when you reboot the device, it will still have the original settings.
authentication open	Sets the type of authentication to open.
authentication shared	Sets the type of authentication to shared.
clrscrn	Clears the screen.
default authentication	Restores the authentication type to the default value (open).
default key size	Restores the key size to the default value (40 bits).
default tx key index	Restores the tx key index to the default value (1).
exit	Exits to the next higher level.
key <instance></instance>	Enters the next lower level. Specify the instance for the next lower level.
key size 104	Sets the key size to 104 bits.
key size 40	Sets the key size to 40 bits.
show	Shows the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
tx key index 1	Selects key 1 for transmission encryption.
tx key index 2	Selects key 2 for transmission encryption.
tx key index 3	Selects key 3 for transmission encryption.
tx key index 4	Selects key 4 for transmission encryption.
write	Stores the current configuration in permanent memory.

wlan profiles (config-pro	ofiles) level commands
apply wlan	Try out WLAN settings without saving them to Flash. If the settings do not work, when you reboot the device, it will still have the original settings.
clrscrn	Clears the screen.
create <profile name=""></profile>	Create a new profile name
delete <profile name=""></profile>	Delete existing profile by name
edit <profile name=""></profile>	View or edit an existing profile
exit	Exits to the config level.
show	Show existing profile names
show history	Displays the last 20 commands entered during the current CLI session.
write	Stores the current configuration in permanent memory.
wlan0 link state change	(config-action:wlan0 link state change) level commands
clrscrn	Clears the screen.
default delay	Resets alarm processing delay to its default value.
delay <seconds></seconds>	Sets the delay in processing the alarm. Alarm actions will not be executed if the cause is corrected within this time.
email	Enters the next lower level.
exit	Exits to the config alarm level.
ftp put	Enters the next lower level.
http post	Enters the next lower level.
show	Displays the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
show status	Displays statistics.
snmp trap	Enters the next lower level.
write	Stores the current configuration in permanent memory.
wpax (config-profile-sec	urity-wpax:default_infrastructure_profile) level commands
apply wlan	Try out WLAN settings without saving them to Flash. If the settings do not work, when you reboot the device, it will still have the original settings.
authentication 802.1x	Sets the authentication method to IEEE 802.1x.
authentication psk	Sets the authentication method to PSK.
clrscrn	Clears the screen.
credentials <text></text>	Selects the RSA certificate by configured name.
default authentication	Restores the authentication method to the default value (PSK).
default eap-ttls option	Restores the EAP-TTLS protocol options to the default (EAP-MSCHAP V2).
default fast option	Restores the FAST authentication protocol option to the default (MD5).
default fast provisioning	Restores the FAST provisioning to the default (Authenticated).
default ieee 802.1x	Restores the default IEEE 802.1x protocol, EAP-TTLS.
default peap option	Restores the PEAP authentication protocol options to the default (EAP-MSCHAP V2).
default pmf	Restores PMF to the default value (Disabled).
eap-ttls option chap	Sets the EAP-TTLS authentication protocol option to CHAP.
441	Sets the EAP-TTLS authentication protocol option to EAP-MD5.
eap-ttls option eap-md5	
eap-ttls option eap-mschapv2	Sets the EAP-TTLS authentication protocol option to EAP-MSCHAP V2.
eap-ttls option eap-	Sets the EAP-TTLS authentication protocol option to EAP-MSCHAP V2. Sets the EAP-TTLS authentication protocol option to MSCHAP.
eap-ttls option eap- mschapv2	
eap-ttls option eap- mschapv2 eap-ttls option mschap	Sets the EAP-TTLS authentication protocol option to MSCHAP.

exit	Exits to the next higher level.
fast option gtc	Sets the FAST authentication protocol option to GTC.
fast option md5	Sets the FAST authentication protocol option to MD5.
fast option mschapv2	Sets the FAST authentication protocol option to MSCHAPv2.
fast provisioning authenticated	Sets the FAST provisioning option to Authenticated.
fast provisioning both	Sets the FAST provisioning option to Both.
fast provisioning unauthenticated	Sets the FAST provisioning option to Unauthenticated.
ieee 802.1x eap-tls	Sets the IEEE 802.1x protocol to EAP-TLS.
ieee 802.1x eap-ttls	Sets the IEEE 802.1x protocol to EAP-TTLS.
ieee 802.1x fast	Sets the IEEE 802.1x protocol to FAST.
ieee 802.1x leap	Sets the IEEE 802.1x protocol to LEAP.
ieee 802.1x peap	Sets the IEEE 802.1x protocol to PEAP.
inner credentials <text></text>	Selects the RSA certificate by configured name.
key <hexadecimal></hexadecimal>	Sets WPAx key. Each byte is represented by two adjacent hex digits. Bytes may run together or be separated by optional punctuation: 123ABC "12 3A BC" 12,3A,BC 12.3a.bc 12:3a:bc Note that quotes must enclose the value if it contains spaces.
key text <text></text>	Sets WPAx key. Each byte is represented by a single character. Note that quotes must enclose the value if it contains spaces.
no credentials	Clears the RSA certificate name.
no inner credentials	Clears the RSA certificate name.
no key	Removes WPAx key.
no password	Clears the password.
no username	Clears the user name.
password <text></text>	Sets the value for the password. <text> = put quotes around the characters (max 63).</text>
peap option eap-md5	Sets the PEAP authentication protocol option to EAP-MD5.
peap option eap- mschapv2	Sets the PEAP authentication protocol option to EAP-MSCHAP V2.
peap option eap-tls	Sets the PEAP authentication protocol option to EAP-TLS.
pmf disabled	Disables PMF.
pmf optional	Makes PMF optional.
pmf required	Makes PMF required.
show	Shows the current configuration.
show history	Displays the last 20 commands entered during the current CLI session.
username <text></text>	Sets the value of the username. <text> = value in characters (max 63).</text>
validate certificate disa- ble	Server certificate will not be verified.
validate certificate enable	Server certificate will be verified.
write	Stores the current configuration in permanent memory.
xml (xml) level command	ds
clrscrn	Clears the screen.
exit	Exits to the enable level.
jsr dump	Dump JSON Status Records to the console
jsr dump < <i>group list</i> >	Dump specified JSON Status Records to the console
jsr export <file></file>	Save JSON Status Record to a file
jsr export <file> <group< td=""><td>Save specified JSON Status Record to a local file</td></group<></file>	Save specified JSON Status Record to a local file

list>	
jsr list	List JSON Status Record groups to the console
jsr metadata dump <group list=""></group>	Dump specified JSON Status Records with metadata to the console
jsr metadata export <file></file>	Save JSON Status Record to a file
show history	Displays the last 20 commands entered during the current CLI session.
write	Stores the current configuration in permanent memory.
xcr dump	Dump XML configuration to the console
xcr dump <group list=""></group>	Dump specified XML configuration to the console
xcr export <file></file>	Save XML configuration to a file
xcr export <file> <group list=""></group></file>	Save specified XML configuration to a local file
xcr import <file></file>	Load XML configuration from a local file
xcr import <file> <group list=""></group></file>	Load specified XML configuration from a local file
xcr list	List XML Configuration Record groups to the console
xsr dump	Dump XML Status Records to the console
xsr dump <group list=""></group>	Dump specified XML Status Records to the console
xsr export <file></file>	Save XML Status Record to a file
xsr export <file> <group list=""></group></file>	Save specified XML Status Record to a local file
xsr list	List XML Status Record groups to the console
