Description

The S8X5ECS offers a high static dv/dt with a low turn off (tq) time. It is specifically designed for GFCI (Ground Fault Circuit Interrupter) and AFCI (Arc Fault Circuit Interrupter), RCD (Residual Current Device) and RCBO (Residual Current Circuit Breaker with Overload Protection) applications. All SCR junctions are glass-passivated to ensure long term reliability and parametric stability.

Features

- Thru-hole packages
- Surge current capability < 20Amps
- Blocking voltage (V_{DRM} / V_{RRM}) capability - up to 800V
- Non-repetitive direct surge peak off-state voltage (V_{DSM}) up to 1200V
- Non-repetitive reverse surge peak off-state voltage (V_{RSM}) up to 1000V
- High dv/dt noise immunity
- Improved turn-off time (t_a)
- Sensitive gate for direct microprocessor interface
- Halogen free and RoHS compliant

Design Considerations

Careful selection of the correct component for the application's operating parameters and environment will go a long way toward extending the operating life of the Thyristor. Good design practice should limit the maximum continuous current through the main terminals to 75% of the component rating. Other ways to ensure long life for a power discrete semiconductor are proper heat sinking and selection of voltage ratings for worst case conditions. Overheating, overvoltage (including dv/dt), and surge currents are the main killers of semiconductors. Correct mounting, soldering, and forming of the leads also help protect against component damage.
